The Radical Machiavelli: Politics, Philosophy and Language offers a partial and even partisan reading of Machiavelli, whose thought continues to divide interpreters, forcing them to confront their responsibility as contemporary thinkers in a global society. When Archaeology Meets Communities examines the history of nineteenth-century Sicilian archaeology through the archival documentation for the excavations at Tindari, Lipari and nearby minor sites in the Messina province, from Italy's Unification to the end of the First World War (1861-1918). This second of a three-volume set documenting Emma Goldman's life and work in the United States covers the years from 1902 through the end of 1909, from the 1901 assassination of President McKinley by a Polish-American

anarchist through Goldman's participation in a wider political sphere that began with her launch of the anarchist magazine *Mother Earth*. Is the legacy of the Neorealist film-making mode (or should we say mood?) a withered one? If not, what is the ideal dialogue between contemporary Italian directors and this momentous page of their cultural history all about? The aim of this book is to show that, far from being exhausted, the vivifying lymph of post-Second World War Italian Neorealism continues to sustain the aesthetic praxis of many artists. Predominantly, the staying power of Neorealism becomes apparent in the stringent moral urgency behind the realization of films such as *Gomorra*, *Lamerica*, or *Terra Madre*. All of them, although cinematically very sophisticated, retain the anxiety of engagement and the impassionate look upon reality that characterized the masterpieces of Rossellini, De Sica, and Visconti. All the essays in this collection highlight how, in responding to the unprecedented challenges of the New Millennium, Italian movie makers such as Garrone, Amelio, or Olmi, are able to recapture the ethical and methodological spirit of classic Neorealism in very interesting ways. The concept of university language centres has changed in recent decades. Initially conceived as laboratories for practical and autonomous language-learning, they are now considered as places with more specific and complex functions in language teaching and learning. University language centres now constitute networks for exchanging knowledge and know-how in order to respond to ever-changing, multilingual and multicultural contexts. At the same time, the availability and acquisition of new technologies is contributing to the creation of new tools for the provision of appropriate services and training. This collection covers a wide range of topics related to the activities, experiences and applied research carried out in Italian university language centres. It provides further evidence of the important role university language centres play in promoting language expertise, developing tools and adopting digital resources, and providing

support and training for language teaching. Technology, creativity, methodologies and plurilingualism are key topics in the book as they constitute the essential ingredients for effective and successful language teaching and learning. The volume's thirty-three chapters provide multi-perspective approaches, showing how the real contexts of current language education need the integration of theoretical backgrounds with the best practices resulting from practical experience. A unique history of one of American radicalism's most fiercely outspoken figures

Foreword

The modern developments in mathematical biology took place roughly between 1920 and 1940, a period now referred to as the "Golden Age of Theoretical Biology". The eminent Italian mathematician Vito Volterra played a decisive and widely acknowledged role in these developments. Volterra's interest in the application of mathematics to the non physical sciences, and to biology and economics in particular, dates back to the turn of the century and was expressed in his inaugural address at the University of Rome for the academic year 1900/01 (VOLTERRA 1901). Nevertheless, it was only in the mid-twenties that Volterra entered the field in person, at the instigation of his son in law, Umberto D'Ancona, who had confronted him with the problem of competition among animal species, asking him whether a mathematical treatment was possible. From that time on, until his death in 1940, Volterra produced a huge output of publications on the subject. Volterra's specific project was to transfer the model and the concepts of classical mechanics to biology, constructing a sort of "rational mechanics" and an "analytic mechanics" of biological associations. The new subject was thus to be equipped with a solid experimental or at least empirical basis, also in this case following the tried and tested example of mathematical physics. Although very few specific features of this reductionist programme have actually survived, Volterra's contribution was decisive, as is now universally acknowledged, in encouraging fresh studies in the field of mathematical biology. Anyone

interested in the history of Eritrea, Ethiopia, or Italian and British Imperialism will learn much from this book. It gives the full texts of the treasure-house of unpublished documents on which the same author's Lords of the Red Sea was based. These documents were produced at the end of the 19th century by the Italian administrators in Eritrea who dealt with the local nomads. These young officers became intrigued by the society and history of the highly developed Habab tribe, even as they became part of that history, replacing loose hegemony with direct sovereignty. Their records document not only their own important role in the "Scramble for Africa" but also the whole culture and historical memory of a fascinating society.
