Becoming a Physical Education

Teacher Sep 06

2020 Teaching physical education is a challenging but rewarding occupation. Finding a way into the profession can be a daunting task while regular changes in government policy can make it hard to stay up to date. This engaging new book explains the process of

becoming and being a teacher of secondary school physical education, from the various routes of entry into the profession, to the realities of being a qualified PE teacher, to the ways in which experienced teachers can become teacher educators and nurture the next generation. It combines rich personal accounts of teaching in, and being taught, physical education, with practical advice for trainees, newly qualified teachers and established professionals, with an emphasis throughout on the importance of critical self-reflection. The book begins by exploring

the nature and purpose of physical education and examining the historical development of initial teacher training. It examines recent changes in training, policy and curriculum, and offers an overview of the various ways of becoming a PE teacher, including the Post Graduate Certificate in Education (PGCE) and school and employment based routes. The book offers advice on what to expect at interview, meeting the standards for qualifying to teach, and on how to survive the difficult first year as a newly-qualified teacher. It also outlines the challenges and

Threshold Concepts in Physical Education

Jul 05

2020 This

innovative and user-friendly book uses a design thinking approach to examine transformative learning and liminality in physical education. Covering theory and practice, it introduces the important idea of 'threshold concepts' for physical education, helping physical educators to introduce those concepts into curriculum, pedagogy and

assessment. The book invites us to reflect on what is learned in, through and about physical education - to identify its core threshold concepts. Once identified, the book explains how the learning of threshold concepts can be planned using principles of pedagogical translation for all four learning domains (cognitive, psychomotor, affective and social). The book is arranged into three key sections which walk the reader through the underpinning concepts, use movement case studies to explore and generate threshold concepts in physical education using design thinking

approach and, finally, provide a guiding Praxis Matrix for PE Threshold Concepts that can be used for physical educators across a range of school and physical activity learning contexts. Outlining fundamental theory and useful, practical teaching and coaching advice, this book is invaluable reading for all PE teacher educators, coach educators, and any advanced student, coach or teacher looking to enrich their knowledge and professional practice.

Models-based Practice in Physical Education

Education Dec 10 2020 This book offers a comprehensive synthesis of over 40 years of research on models in physical education to suggest Models-based Practice (MbP) as an innovative future approach to physical education. It lays out the ideal conditions for MbP to flourish by situating pedagogical models at the core of physical education programs and allowing space for local agency and the co-construction of practice. Starting from the premise that true MbP does

not yet exist, the book makes a case for the term "pedagogical model" over alternatives such as curriculum model and instructional model, and explains how learners' cognitive, social, affective and psychomotor needs should be organised in ways that are distinctive and unique to each model. It examines the core principles underpinning the pedagogical models that make up MbP, including pedagogical models as organising centres for program design and as design specifications for developing local programs. The book also explores how a common structure can be applied to

analyse pedagogical models at macro, meso and micro levels of discourse. Having created a language through which to talk about pedagogical models and MbP, the book concludes by identifying the conditions - some existing and some aspirational - under which MbP can prosper in reforming physical education. An essential read for academics, doctoral and post-graduate students, and pre-service and in-service teachers, *Models-based Practice in Physical Education* is a vital point of reference for anyone who is interested in pedagogical models and wants to embrace this potential future of

physical education. *AQA GCSE PE Performance Analysis: Student Companion* Nov 01 2022 A comprehensive step-by-step guide for teachers and students on how to plan and complete a Performance Analysis as part of the AQA GCSE PE course. Teaching Physical Education Nov 20 2021 This book

assesses the landscape of physical education today and the issues that shape it as a curriculum subject, particularly in the era of COVID-19. It explores the processes of transformation and change that follow government policy and considers what this means for physical education practitioners in schools. The book covers a wide range of important issues, across (micro-)political, social-cultural, historical and post-modernist categories. Bringing together current research with autobiographical and anecdotal reflections on the realities of PE teaching, it

considers the significance of issues such as the emphasis on competitive sport in schools, the socialization of teachers, the influence of politics and policy on the classroom, colonization and decolonization of the curriculum, digital technologies, the health and well-being agenda and the impact of the COVID-19 pandemic. Offering a unique set of critical perspectives on physical education today, this book is essential reading for any physical education course, for all teacher training programmes with a PE track and for all practising teachers, teacher educators

or policy-makers with a professional interest in PE.
