The prerequisite for the study of this book is a knowledge of matrices and the essentials of functions of a complex variable. It has been developed from courses given by the authors and probably contains more material than will ordinarily be covered in a one-year course. It is hoped that the book will be a useful text in the application of differential equations as well as for the pure mathematician. The aircraft is only a transport mechanism for the payload, and all design decisions must consider payload first. Simply stated, the aircraft is a dust cover. "Fundamentals of Aircraft and Airship Design, Volume 1: Aircraft Design" emphasizes that the science and art of the aircraft design process is a compromise and that there is no right answer; however, there is always a best answer based on existing requirements and available technologies. Aeroacoustics of Low Mach Number Flows: Fundamentals, Analysis, and Measurement provides a comprehensive treatment of sound radiation from subsonic flow over moving surfaces, which is the most widespread cause of flow noise in engineering systems. This includes fan noise, rotor noise, wind turbine noise, boundary layer noise, and aircraft noise. Beginning with fluid dynamics, the fundamental equations of aeroacoustics are derived and the key methods of solution are explained, focusing both on the necessary mathematics and physics. Fundamentals of turbulence and turbulent flows, experimental methods and numerous applications are also covered. The book is an ideal source of information on aeroacoustics for researchers and graduate students in engineering, physics, or applied math, as well as for engineers working in this field. Supplementary material for this book is provided by the authors on the website www.aeroacoustics.net. The website provides educational content designed to help students and researchers in understanding some of the principles and applications of aeroacoustics, and includes example problems, data, sample codes, course plans and errata. The website is continuously being reviewed and added to. Explains the key theoretical tools of aeroacoustics, from Lighthill's analogy to the Ffowcs Williams and Hawkings equation Provides detailed coverage of sound from lifting surfaces, boundary layers, rotating blades, ducted fans and more Presents the fundamentals of sound measurement and aeroacoustic wind tunnel testing Testimonials of Astranti Courses, Study d104s and Mock Exams: Testimonials of Astranti Courses, Study Texts and Mock Exams: "Very targeted to the exam and very professional, is every bit as good as attending a class room tuition or revision course." Nneoma Nwaogu "I would also like to extend my great gratitude for such a wonderful study text; they made my understanding of CIMA P1 much easier. Once more thank you very much to the Team." Mthuthuzeli September "I received the fantastic news this morning that I have finally passed T4!! Many thanks for your support and advice in the lead up to the exam, I am certain that without the really important tips on exam strategy you provided I would not have passed. Many thanks again!" Babak Fardaghaie "So I managed a 76% pass for E2 using your notes. They are very well structured and easy to use. Thank you so very much." Amanda Vakalisa "The Astranti method of teaching is systematic and easy to follow. I gained a lot of knowledge and regret not enrolling with Astranti for my earlier CIMA exams. After the course I was confident about my preparation. I would recommend the course to everyone sitting the T4b exam especially the MARKED mocks. Its the section by section detailed feedback from tutors that helps to improve and gain confidence." Gunjan Nagpal "I have cleared all 3 strategic level papers in my first attempt. I used the Astranti learning material during my final revision. They were short, precise and saved a great amount of time which made all the difference for me in the exam. Thank you very much."
