This volume brings together papers that offer methodologies, conceptual analyses, highlight issues, propose solutions, and discuss practices regarding privacy and data protection. It is one of the results of the eight annual International Conference on Computers, Privacy, and Data Protection, CPDP 2015, held in Brussels in January 2015. The book explores core concepts, rights and values in (upcoming) data protection regulation and their (in)adequacy in view of developments such as Big and Open Data, including the right to be forgotten, metadata, and anonymity. It discusses privacy promoting methods and tools such as a formal systems modeling methodology, privacy by design in various forms (robotics, anonymous payment), the opportunities and burdens of privacy self management, the differentiating role privacy can play in innovation. The book also discusses EU policies with respect to Big and Open Data and provides advice to policy makers regarding these topics. Also attention is being paid to regulation and its effects, for instance in case of the so-called 'EU-cookie law' and groundbreaking cases, such as Europe v. Facebook. This interdisciplinary book was written during what may turn out to be the final stages of the process of the fundamental revision of the current EU data protection law by the Data Protection

Package proposed by the European Commission. It discusses open issues and daring and prospective approaches. It will serve as an insightful resource for readers with an interest in privacy and data protection. The Palgrave Encyclopedia Imperialism and Anti-Imperialism objectively presents the prominent themes, epochal events, theoretical explanations, and historical accounts of imperialism from 1776 to the present. It is the most historically and academically comprehensive examination of the subject to date. The U.S. Census Bureau and the U.S. Bureau of Economic Analysis, through the Department of Commerce, announced today that the goods and services deficit was \$51.4 billion in March, up \$15.5 billion from \$35.9 billion in February, revised. March exports were \$187.8 billion, \$1.6 billion more than February exports. March imports were \$239.2 billion, \$17.1 billion more than February imports. The March increase in the goods and services deficit reflected an increase in the goods deficit of \$14.9 billion to \$70.6 billion and a decrease in the services surplus of \$0.6 billion to \$19.2 billion. Year-to-date, the goods and services deficit increased \$6.4 billion, or 5.2 percent, from the same period in 2014. Exports decreased \$11.7 billion or 2.0 percent. Imports decreased \$5.3 billion or 0.8 percent. Raising costs, ever-increasing regulatory hurdles, and mounting difficulties in finding the next blockbuster drug are just a few of the challenges Big Pharma currently has to face for its research and development process, the heart of its risky business. Big Data claims to be full of insights that Big Pharma need to find a way of harvesting, which could lead to new compounds. Academics, Big Data start-ups, and pharmaceutical companies have focused their research efforts on analytic tools and data technologies to store, collect, analyse, and extract these insights from massive data sets. However, the key question is whether the Big Data hype really does have the claimed

accelerating effect on the complex research and development process or if it actually creates another hurdle for Big Pharma innovation. Malena Johannes' timely book sheds light on this question by examining the top 5 pharmaceutical companies and provides an overview on the status quo of Big Data applications within the pharmaceutical industry. Biologics have revolutionized the treatment of autoimmune diseases due to their efficacy, speed of onset, and tolerability. The development of new agents and expanded use of existing agents continues to be a highly active area of investigation among rheumatic diseases, with a multitude of innovative therapeutic strategies in various stages of development. Although the story of treatments continues rapidly, therapeutic research in some conditions is hindered by the rarity of the disease, variation in phenotype, and concerns about toxicity. This fast-paced development of therapeutics, necessitates immediate evaluation of individual biologic agents and their best use in the new treatment regimens. This book provides an inclusive approach with the existing evidence concerning effectiveness and implications on the usage of biologics in treating various rheumatologic disorders. It also covers the evidence behind the rational use of these agents in varied autoimmune diseases. This manual also offers a complete overview of the existing & futuristic biologic treatments, and draws recommendations on how to standardize the most suitable regimen for a specific patient in the context of current guidelines. The handbook of Biologics in Rheumatology serves as a present and concise compendium to the modern therapeutic developments in the field. This book is likely to benefit clinicians, residents, fellow and other healthcare workers dealing with rheumatological disorders, and also hard-core Rheumatologists, who are looking for a quick recap of Biologics of their interest. This book is a printed edition of the Special

Issue "Groundwater Quantity and Quality" that was published in Resources MARKETING is a thorough overview of essential marketing principles in a visually engaging presentation. This popular resource helps you develop the knowledge and decision-making skills to succeed. MARKETING offers in-depth coverage of fundamental marketing concepts and strategies, plus practical applications and real-world examples, including material on social networking, digital marketing, social and environmental responsibility, globalization, entrepreneurship, and marketing in times of transition. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. In this book, Phan Le-Ha identifies and discusses four growing self-sustained/sustaining fundamental phenomena in transnational education (TNE), namely (1) the planned, evolving and transformative mediocrity behind the endorsement of English-medium education legitimized by the interactive Asia-the West relationship; (2) the strategic employment of the terms 'Asia/Asian' and 'West/Western' by all stakeholders in their perceptions and construction of choice, quality, rigour, reliability and attractiveness of programs, courses, and locations; (3) the adjusted desire for an imagined (and often misinformed) 'West' among various stakeholders of transnational education; and (4) the assigned and self-realized ownership of English by otherwise normally on-the-margin groups of speakers. A focus on how these phenomena impact questions of identity and desire in TNE is a running theme. The above phenomena are discussed against the backdrop of 'the rise of Asia' sentiment and how this sentiment has played out in interactions and relationships between 'the West' and 'Asia' and among Asian institutions and various entities. Phan Le-Ha's examination of the identified phenomena in TNE has been informed by her multi-layered

engagement with the dialectic of the Asia-the West relationship, her critical take on certain pro-Asia and decolonisation scholarship, and her interdisciplinary and multidisciplinary approach to theorise the field and the specific topic under scrutiny. Phan Le-Ha shows that the current Asia chooses (not necessarily by force but largely by will and often with an informed and well-articulated agency) to go with the idea of the West and often desires an affiliation with the West either directly or indirectly, something that is getting more intense in the context of globalization, regionalization, and commercialization of education. The rise of Asia has made the idea of the West even more looked-for in Asia. TNE in Asia, in many ways, is the transforming and dynamic transit point, a layover that facilitates entry into a wanted destination – the West and/or the idea of the West. The West and Asia need one another more than ever in the context of the internationalization and commercialization of higher education. What's more, the West and Asia have hardly ever been mutually exclusive but have rather been in an eventful love-and-obsession relationship with each other. This is the very dialectic proposition that Phan Le Ha takes throughout this book while paying specific attention to transnational higher education in the greater Asian region including the Middle East, following her several research projects conducted in the region since 2005 to date.

Transnational Education Crossing 'the West' and 'Asia' explores:

- English, Internationalisation of Higher Education, and Identity: Increasing Academic Monolingualism and English-only Package
- Transnational Education and Dream Realization: From the Philippines to Vietnam, From Afghanistan to Dubai, From Everywhere in Asia to Thailand
- Desiring International /Transnational Education: Theorisation of Key Concepts and Next Steps from Here

The book will be of interest to researchers

in the field of transnational education, Asia education and education policy. As American television continues to garner considerable esteem, rivalling the seventh art in its "cinematic" aesthetics and the complexity of its narratives, one aspect of its development has been relatively unexamined. While film has long acknowledged its tendency to adapt, an ability that contributed to its status as narrative art (capable of translating canonical texts onto the screen), television adaptations have seemingly been relegated to the miniseries or classic serial. From remakes and reboots to transmedia storytelling, loose adaptations or adaptations which last but a single episode, the recycling of pre-existing narrative is a practice that is just as common in television as in film, and this text seeks to rectify that oversight, examining series from M*A*S*H to Game of Thrones, Pride and Prejudice to Castle. The "smart mobile" has become an essential and inseparable part of our lives. This powerful tool enables us to perform multi-tasks in different modalities of voice, text, gesture, etc. The user plays an important role in the mode of operation, so multimodal interaction provides the user with new complex multiple modalities of interfacing with a system, such as speech, touch, type and more. The book will discuss the new world of mobile multimodality, focusing on innovative technologies and design which create a state-of-the-art user interface. It will examine the practical challenges entailed in meeting commercial deployment goals, and offer new approaches to the designing such interfaces. A multimodal interface for mobile devices requires the integration of several recognition technologies together with sophisticated user interface and distinct tools for input and output of data. The book will address the challenge of designing devices in a synergetic fashion which does not burden the user or to create a technological overload. The Georgetown Journal

of International Affairs is the official publication of the Edmund A. Walsh School of Foreign Service at Georgetown University. Each issue of the journal provides readers with a diverse array of timely, peer-reviewed content penned by top policymakers, business leaders, and academic luminaries. The theme of this issue will be a look at the United Nations past, present, and future, to commemorate its 70th anniversary. The secondary theme will be global development. These proceedings represent the work of researchers participating in the 13th International Conference on Cyber Warfare and Security (ICCWS 2018) which is being hosted this year by the National Defense University in Washington DC, USA on 8-9 March 2018. Democracy promotion, security and energy are the predominant themes of US policy in Central Asia after the Cold War. This book analyses how the Bush administration understood and pursued its interests in the Central Asia states, namely Kyrgyzstan, Tajikistan, Kazakhstan, Uzbekistan, Turkmenistan. It discusses the shift in US interests after September 11 and highlights key ideas, actors and processes that have been driving US policy in Central Asia. The author examines the similarities between the Bush and Obama administrations' attitudes towards the region, and he points to the inadequacy of the personality focused, partisan accounts that have all too often been deployed to describe the two presidential administrations. To understand US Central Asian policy, it is necessary to appreciate the factors behind its continuities as well as the legacies of the September 11 attacks. Using case studies on the war on terror, energy and democracy, drawing on personal interviews with Americans and Central Asians as well as the fairly recent releases of declassified and leaked US Government documents via sources like the Rumsfeld Papers and Wikileaks, the author argues that the US approached Central Asia as a non-unitary state with an

ambiguous hierarchy of interests. Traditionally domestic issues could be internationalised and non-state actors were able to play significant roles. The actual relationships between its interests were neither as harmonious nor as conflicted as the administration and some of its critics claimed. Shedding new light on US relations with Central Asia, this book is of interest to scholars of Central Asia, US Politics and International Relations. Systematic and critical examination of Chinese refugee law and policy including information acquired from interviews and field visits. The ability of law enforcement agencies to manage and act upon intelligence is the key to countering terrorism. Likewise, a critical foundation of intelligence-led policing is the proper analysis of all information gained. Terrorism and Organized Hate Crime: Intelligence Gathering, Analysis, and Investigations, Fourth Edition demonstrates how to recognize the indicators of an impending act of terrorism or mass violence, how to deter an attack, and how to transform information into intelligence to meet community demands for safety and security. The Fourth Edition has been completely updated and expanded to cover numerous topics facing those tasked with investigating and thwarting terrorism and the terrorist acts throughout the world today. Many investigators have sought to understand the growth of the radical extremist and terrorist organization ranks. The Fourth Edition dedicates an expanded new chapter to the concerns and processes centering on radicalization and recruitment. This new chapter covers such in-depth topics like: criminal roots, gang connection, conversion, causes of extremism, models of recruitment and radicalization including self-radicalization, recruiting in the digital age, social media, youth targeting, prison radicalization and recruitment, legal concerns, case studies and groups, as well as what can be done to prevent recruitment. In addition to the new chapter, there is a

new guide to sources of information for investigators and expanded discussion on IRA tactics and ISIS. Using techniques applicable to the private and the public sector, the book combines academic, research, and practitioner perspectives to establish a protocol for effectively gathering, analyzing, investigating, and disseminating criminal intelligence. Additional coverage includes the role of fusion centers, terrorism financing, the handling of classified materials, the National Suspicious Activity Reporting (SAR) Initiative as well as pre-incident indicators and behavioral traits associated with terrorism. A one-stop resource for the homeland security, intelligence analyst, and investigative professional, the book arms those tasked with protecting the public with a solid blueprint for combating and investigating crimes associated with terrorism and hate. Also widely used as a core text, *Terrorism and Organized Hate Crime, Fourth Edition* teaches practical applications to those students enrolled in such courses as *Terrorism and Hate Crimes*, *Violence and Terrorism*, *Domestic Terrorism*, *Terrorism and Political Violence*, and *Terrorism and Homeland Security*. Accompanying PowerPoint™ slides and a Test Bank are available to professors upon qualifying course adoption.

The International Chess Federation or FIDE (from the French Federation Internationale des Echecs) was founded in Paris in 1924 but only from 1950 began to award international titles. This book lists more than 18,000 players who received titles from 1950 through 2016. Entries include (where available) the player's full name, federation, date of birth, place of birth, date of death, place of death, title and year of award and peak rating (month and year), with references provided. This book constitutes the refereed proceedings of the 16th International Conference on Passive and Active Measurement, PAM 2015, held in New York, NY, USA, in March 2015. The 27 full papers

presented were carefully reviewed and selected from 100 submissions. The papers have been organized in the following topical sections: DNS and Routing, Mobile and Cellular, IPv6, Internet-Wide, Web and Peer-to-Peer, Wireless and Embedded, and Software Defined Networking. This Special Issue presents the recent advances in sensor technologies for smart homes, including fiber Bragg grating (FBG) sensors for detecting the presence and number of occupants, the Internet of things for monitoring CO₂ concentration, and designing a novel eye-tracking system for monitoring and controlling a smart home, and infrared thermal sensors for fall detection. Such new explorations are pushing the boundary of sensing technologies and, thus, will have more profound implications for the future smart home. Advanced machine learning and data mining algorithms have been proposed to address sensor failure, appliance identification, and human activity recognition in a home environment. These results will enable a promising, sustainable deployment of sensing technologies. A novel multi-agent gamification system is proposed for managing tasks between household members and between families, which demonstrate another dimension of future smart home application. This Special Issue concludes with a review on sensors for human activity recognition. This work paves the roadmap for deploying smart home systems in different socioeconomic contexts. The whole Special Issue has significantly helped to shape our understanding of the strength, implications, and barriers of deploying long-term, sustainable, sensor technologies for smart homes. It's your complete guide to nursing — from basic concepts to essential skills! Fundamentals of Nursing, 9th Edition prepares you to succeed as a nurse by providing a solid foundation in critical thinking, evidence-based practice, nursing theory, and safe clinical care in all settings.

With illustrated, step-by-step guidelines, this book makes it easy to learn important skills and procedures. Care plans are presented within a nursing process framework, and case studies show how to apply concepts to nursing practice. From an expert author team led by Patricia Potter and Anne Griffin Perry, this bestselling nursing textbook helps you develop the understanding and clinical reasoning you need to provide excellent patient care. 51 skills demonstrations provide illustrated, step-by-step instructions for safe nursing care — and include rationales for each step. 29 procedural guidelines provide streamlined, step-by-step instructions for performing basic skills. UNIQUE! Critical Thinking Models in each clinical chapter show how to apply the nursing process and critical thinking to achieve successful clinical outcomes. Evidence-Based Practice chapter shows how nursing research helps in determining best practices. UNIQUE! Caring for the Cancer Survivor chapter prepares nurses to care for cancer patients who may still face physical and emotional issues. Case studies include unique clinical application questions and exercises, allowing you to practice using care plans and concept maps. The 5-step nursing process provides a consistent framework for care, and is demonstrated in more than 20 care plans. 15 review questions in every chapter test your retention of key concepts, with answers available in the book and on the Evolve companion website. Practical study tools on Evolve include video clips of skills, skills checklists, printable key points, a fluid & electrolytes tutorial, a concept map creator, an audio glossary, and more. UNIQUE! Clear, streamlined writing style makes complex material more approachable. More than 20 concept maps show care planning for clients with multiple nursing diagnoses. Key points and key terms in each chapter summarize important content for more efficient review and

study. Unexpected Outcomes and Related Interventions for each skill alert you to potential problems and appropriate nursing actions. Delegation coverage clarifies which tasks can and cannot be delegated. A glossary provides quick access to definitions for all key terms. Health Care USA, Ninth Edition offers students of health administration, public health, medicine, and related fields a wide-ranging overview of America's health care system. Combining historical perspective with analysis of current trends, this expanded edition charts the evolution of modern American health care, providing a complete examination of its organization and delivery while offering critical insight into the issues that the U.S. health system faces today. The past few years have been a period of unprecedented political upheaval for the Maghreb. A protest which began in a provincial city in one of North Africa's quieter corners quickly engulfed the entire region. Presidents of decades standing were swept from office on waves of public discontent while their counterparts elsewhere nervously tried to calm the mob. In several places these protests are still being played out; in the law courts of Egypt, on the battlefields of Libya, and in the leaking tubs carrying migrants to Europe. And even where the winds of change have died down, the political and social landscape is altered from before. Herein lies a defining paradox of the Arab Spring; its ubiquity and singularity. Nearly all of the region's countries have been affected. But despite making similar demands in largely the same ways over much the same period, their respective protest movements have achieved different results. Drawing on Steven Levitsky and Lucan Way's celebrated model for examining political transitions, this book explains these discrepancies, why Tunisia, Algeria, Morocco and Mauritania have reached different outcomes. It does so by contextualising each country's experiences, by examining and

comparing their political development over the past decade. This is the third volume of the five-volume book series “Engineering Tools for Environmental Risk Management”. The book series deals with the following topics: • Environmental deterioration and pollution, management of environmental problems • Environmental toxicology – a tool for managing chemical substances and contaminated environment • Assessment and monitoring tools, risk assessment • Risk reduction measures and technologies • Case studies for demonstration of the application of engineering tools

The authors aim to describe interactions and options in risk management by providing a broad scientific overview of the environment, its human uses and the associated local, regional and global environmental problems; interpreting the holistic approach used in solving environmental protection issues; striking a balance between nature’s needs and engineering capabilities; understanding interactions between regulation, management and engineering; obtaining information about novel technologies and innovative engineering tools. This third volume provides an overview on the basic principles, concepts, practices and tools of environmental monitoring and contaminated site assessment. The volume focuses on those engineering tools that enable integrated site assessment and decision making and ensure an efficient control of the environment. Some topics supporting sustainable land use and efficient environmental management are listed below: • Efficient management and regulation of contaminated land and the environment; • Early warning and environmental monitoring; • Assessment of contaminated land: the best practices; • Environmental sampling; • Risk characterization and contaminated matrix assessment; • Integrated application of physical, chemical, biological, ecological and (eco) toxicological characterization methods; • Direct toxicity assessment (DTA)

and decision making; • Online analyzers, electrodes and biosensors for assessment and monitoring of waters.; • In situ and real-time measurement tools for soil and contaminated sites; • Rapid on-site methods and contaminant and toxicity assessment kits; • Engineering tools from omics technologies, microsensors to heavy machinery; • Dynamic characterization of subsurface soil and groundwater using membrane interface probes, optical and X-ray fluorescence and ELCAD wastewater characterization; • Geochemical modeling: methods and applications; • Environmental assessment using cyclodextrins.

This book series focuses on the state of knowledge about the environment and its conscious and structured application in environmental engineering, management and decision making. This book investigates the determinants of leadership in East Asia, emphasizing the significance of followership in the success and failure of leadership projects proposed by China, Japan, and the United States. While doing so, it answers a central question in the field of international relations: Why do potential leader countries succeed in obtaining potential followers in some instances, but fail to do so in other instances? Employing an inclusive leadership and societal approach, the book investigates how the leading countries motivate followership in East Asian economic and security dynamics. It analyzes how Chinese, Japanese and American leadership obtained acceptance from potential followers, focusing on the significance of domestic politics of potential follower countries in shaping their governmental preferences and generating followership. The book features empirical evidence in six case studies, covering topics such as the successful Chinese endeavor of South Korea joining the Chinese initiative for the Asian Infrastructure and Investment Bank (AIIB), the failed US attempt to prevent South Korea from doing so, the US's success

to convince Japan to join the Trans-Pacific Partnership (TPP), the failed Japanese strive for winning South Korea's support for Japan's bid for a permanent seat at the UN Security Council (UNSC), the Chinese failure at obtaining the Philippines' backing of the Chinese aspirations in the South China Sea (SCS) during the Aquino Presidency, and, finally, the Chinese success on the same effort during the Duterte presidency. The book will appeal to students, scholars, and researchers of international relations interested in a better understanding of leadership determinants in East Asia, Global Power Shift, foreign policy, as well as East Asian economic and security dynamics. Climate change has never been more important than it is now, as it has become arguably the world's most urgent problem. Solving this problem is proving difficult and complex as it involves joint efforts by governments, companies, communities and innovators. The increased use of fossil fuels associated with global economic growths has led to rising GHG emissions and global warming. There are many challenges for countries that are enacting new climate and clean energy regulations in line with their Paris Agreement commitments. Good government policies and corporate strategies are essential to support these efforts as part of the global climate change crisis. This important book addresses the latest climate change impacts and developments in potential mitigation strategies. These include fossil to clean energy transition, smart low carbon city designs, green transportation, electric vehicles, green agriculture, carbon emission trading, carbon capture solutions plus climate finance and risk management. Potential new policies and strategies to support the successful implementation of these important strategic areas are discussed together with high-level country and business case examples. This book is essential reading for policy makers, government employees, business executives,

professionals, researchers and academics alike looking to affect change to global climate and energy policies. "This newest edition of the best-selling *In Fashion* offers a clear introduction to the fashion industry that is as dynamic as the business itself. Through concise language and full-color photographs, the text provides students with an overview of fashion, from its history, cyclical nature, and development, to the materials, producers, and retailers who impact the business on a global level. Whether their plans include design, product development, merchandising, buying, manufacturing, or entrepreneurship, students will gain a thorough understanding of how the industry works and what lies ahead for them professionally"--
