Many networked computer systems are far too vulnerable to cyber attacks that can inhibit their functioning, corrupt important data, or expose private information. Not surprisingly, the field of cyber-based systems is a fertile ground where many tasks can be formulated as learning problems and approached in terms of machine learning algorithms. This book contains original materials by leading researchers in the area and covers applications of different machine learning methods in the reliability, security, performance, and privacy issues of cyber space. It enables readers to discover what types of learning methods are at their disposal, summarizing the state-of-the-practice in this significant area, and giving a classification of existing work. Those working in the field of cyber-based systems, including industrial managers, researchers, engineers, and graduate and senior

undergraduate students will find this an indispensable guide in creating systems resistant to and tolerant of cyber attacks. In 2009 from June to August, Skip Hunt traveled in Mexico on a motorcycle and blogged it all from the road. The journey began in the sacred desert region known as Huicrúta, to major cities, strange villages that induced strange *deja-vu*, mountains, jungle, peyote/mushroom rituals, coastline, and amazing winding roads all throughout the Sierra Madres. *Disfruta!* This book is printed on Premium Paper: "This 100-pound text silk-finish paper features improved opacity over our standard paper and stellar image quality." Metaheuristic algorithms are considered as generic optimization tools that can solve very complex problems characterized by having very large search spaces. Metaheuristic methods reduce the effective size of the search space through the use of effective search strategies. **Book Features:** Provides a unified view of the most popular metaheuristic methods currently in use Includes the necessary concepts to enable readers to implement and modify already known metaheuristic methods to solve problems Covers design aspects and implementation in MATLAB® Contains numerous examples of problems and solutions that demonstrate the power of these methods of optimization The material has been written from a teaching perspective and, for this reason, this book is primarily intended for undergraduate and postgraduate students of artificial intelligence, metaheuristic methods, and/or evolutionary computation. The objective is to bridge the gap between metaheuristic techniques and complex optimization problems that profit from the convenient properties of metaheuristic approaches. Therefore, engineer practitioners who are not familiar with metaheuristic computation will appreciate that the techniques discussed are beyond simple theoretical tools, since they have been adapted to solve significant problems that commonly arise in such areas. Based on the award-winning blog *1000 Awesome Things*, *The Book of (Even More) Awesome* is the sequel to Pasricha's bestselling *The Book of Awesome*. It is filled with more of the little wins that unexpectedly brighten your day. Finally getting that tiny piece of popcorn out of your teeth, accidentally doing something really good in sports, when a baby falls asleep on you, the moment on holiday when you forget what day of the week it is, waking up to the smell of sizzling bacon. While polar ice caps melt, buzz saws chop down forests, wars go on and on, here's a special, secret place where we can turn off that bright light, snuggle up and get comfy to chat about the sweetest parts of life. Filled with touching, astute and funny observations, each entry ends with the big, booming feeling you'll get when you read through them: AWESOME! Covers receipts and expenditures of appropriations and other funds. From the reviews of the 3rd Edition...
