The Handmade Silver Gelatin Emulsion

Print Nov 20 2021 The Handmade Silver Gelatin Emulsion Print is a cookbook of simple, basic recipes for making black and white printing paper and paper negatives, along with creative options for printing, toning, and coloring. Author Denise Ross draws from photographic literature from the last 135 years, adapting old recipes to fit modern tools, materials, and work spaces and modern twists have been applied to traditional techniques. The book is divided into three sections: Section One lays the groundwork for this unique alternative process; Section Two provides the recipes; Section Three highlights contemporary silver gelatin artists. The book features over 200 full-color images and covers key topics including: Vocabulary: a list of terms used by traditional photographers and emulsion

makers Creating work spaces with the right tools and materials Basic emulsion chemistry and paper coating techniques Working with various negative options, analog and digital Gaslight chloride contact printing paper Kodabromide-type chlorobromide all-purpose paper Bromide enlarging paper Warm tone paper and developers Making and toning your own printing-out paper (POP) Matte surface and baryta coating surface paper Paper negatives and making hand-drawn and digital masks Toning handmade paper Gum printing over handmade paper Troubleshooting handmade paper Artists working with handmade paper The Handmade Silver Gelatin Emulsion Print is for photographers who love the look and creative potential of black and white traditional photography but who want more control over the process and the end product. It is written for the beginner to experienced photographer, with processes initially explained in such a way that anyone will feel comfortable getting started, as

Whatever Happened to the Metric System?

Aug 30 2022 The intriguing tale of why the United States has never adopted the metric system, and what that says about us. The American standard system of measurement is a unique and odd thing to behold with its esoteric, inconsistent standards: twelve inches in a foot,

three feet in a yard, sixteen ounces in a pound, one hundred pennies to the dollar. For something as elemental as counting and estimating the world around us, it seems like a confusing tool to use. So how did we end up with it? Most of the rest of the world is on the metric system, and for a time in the 1970s America appeared ready to make the switch. Yet it never happened, and the reasons for that get to the root of who we think we are, just as the measurements are woven into the ways we think. John Marciano chronicles the origins of measurement systems, the kaleidoscopic array of standards throughout Europe and the thirteen American colonies, the combination of intellect and circumstance that resulted in the metric system's creation in France in the wake of the French Revolution, and America's stubborn adherence to the hybrid United States Customary System ever since. As much as it is a tale of quarters and tenths, it is a human drama, replete with great inventors, visionary

presidents, obsessive activists, and science-loving technocrats. Anyone who reads this inquisitive, engaging story will never read Robert Frost's line "miles to go before I sleep" or eat a foot-long sub again without wondering, "Whatever happened to the metric system?"
