Engineering

Materials Science

provides

information

pertinent to the

fundamental

aspects of materials

science. This book

presents a

compilation of

solutions to a

variety of problems

or issues in

engineering

materials science.

Organized into 15

chapters, this book

begins with an

overview of the

approximate added

value in a contact

lens manufactured from a polymer.

This text then examines several problems based on the electron energy

levels for various elements. Other

chapters explain

why the lattice

constants of

materials can be

determined with

extraordinary

precision by X-ray

diffraction, but with

constantly less

precision and

accuracy using

electron diffraction

techniques. This

book discusses as

well the formula for

the condensation

reaction between

urea and

formaldehyde to

produce

thermosetting urea-

formaldehyde. The

final chapter deals

with the similarities

between electrically

and mechanically

functional materials with regard to reliability issues.

This book is a valuable resource for engineers, students, and research workers.
