"Kidney transplantation has become a routine therapeutic option for patients with end stage kidney disease globally. Over 16,000 to 19,000 kidney transplants are performed annually in the United States. While transplant nephrologists care for transplant recipients and living donors in the perioperative period, general nephrologists are expected to care for these patients after three months following their transplants. The management of immunosuppressive therapy and complications associated with the transplant process is complex and requires an in-depth knowledge of transplant medications, drug interactions, both acute and long-term complications, among many other transplant and non-transplant related problems. Selection and referral of potential living donors are other processes that are vital to kidney transplantation and require the involvement of general nephrologists. It shows how protective devices perform an important function in preventing the accumulation of overpressure that can result in failure and the uncontrolled release of stored energy. They are therefore categorised as safety critical items of engineering equipment. The book goes on to show that their design and testing is heavily controlled by published technical standards because many countries are covered by statutory legislation. The content of the book shows that service damage and degradation mechanisms are outlined for various applications – PRVs and bursting discs are used in a wide variety of process conditions, ranging from clean service to heavily corrosive process fluids. This results in a correspondingly large number of damage mechanisms that can prevent them from working if they are not inspected and tested correctly. Risk based inspection procedures are introduced in this book as a method of minimising the chances of failure, and therefore maintaining high levels of safety. This Quick Guide to Pressure Relief Valves is intended to provide easily accessible technical information for engineers and technicians involved in the operation, testing and maintenance of pressure systems. It also covers other types of protective devices such as bursting discs. As individuals, we are each complex

With the new version of AdSense, Google has changed virtually everything about the interface and added some new features. The navigation structure has been completely overhauled, as have the available types of ads. Google has reorganized the former AdSense Channels into five basic types of ads: Content, Domains, Feeds, Mobile Content, and Search. In addition, Google has tied in-game and YouTube advertising into AdSense, to make it easier to place ads in online games and YouTube videos. Google also has made it easier and more prominent to enable ad blocking -- that is, to keep certain types of ads or ads from certain advertisers from appearing on your website. Google has also beefed up its AdSense reporting system, increasing the types of reports available and adding a new Overview page that displays key information in a single snapshot. While the new interface is a step forward for managing an AdSense account, existing AdSense users may find it strange and confusing-and have trouble finding out how to do what they're used to doing. That's where this Quick Guide comes in. Get up to speed quickly and easily. Then get back to making money. What a year! Twelve months and counting since COVID expanded, stretched, and blurred the boundaries of teaching and learning, at least one thing has remained constant: our commitment as educators to move learning forward. It's just the context that keeps changing—why Doug Fisher, Nancy Frey, John Almarode, and Aleigha Henderson-Rosser have created a follow-up to *The Distance Learning Playbook*, their all-new Quick Guide to Simultaneous, Hybrid, and Blended Learning. First, to be clear: simultaneous learning must not be an additive, meaning we combine two entirely different approaches and double our workload. That's unsustainable! Instead, we must extract, integrate, and implement what works best from both distance learning and face-to-face learning environments. Then and only then—Doug, Nancy, John, and Aleigha insist—can we maximize the learning opportunities for all of our students. To that end, *The Quick Guide to Simultaneous, Hybrid, and Blended Learning* describes how to: Have clarity about the most important learning outcomes for our students. This will help us decide what is best done asynchronously and what is best done with our "Roomies" and "Zoomies." Capitalize on the potential of asynchronous learning and use that valuable time to preview and review. This way we can draw on evidence from these tasks to help us decide where to go next in our teaching and our students' learning. Utilize synchronous learning for collaborative learning and scaffolding of content, skills, and essential understandings. In doing so, we can collect additional evidence of students' learning so that we provide feedback that moves learning forward. Establish norms for combining synchronous and face-to-face environments in simultaneous learning. Importantly, we have to set up the environment for our Roomies and Zoomies to learn together. Develop learning experiences and tasks that maximize learner engagement for all learners in all settings. Focus on acceleration and learning recovery. In other words, no more deficit thinking! Our students are where they are and there are specific things that we can do to ensure their learning. Implement the guide's many resources, strategies, and templates. "None of us chose to be in a situation where some learners are physically in our classrooms, while others attend virtually and remotely," write Doug, Nancy, John, and Aleigha. "However, what we hope to convey is that we've got this! While the context is different, the principles behind clarity, planning, high-yield strategies and interventions, student learning, and assessment hold steady." This is where *The Quick Guide to Simultaneous, Hybrid, and Blended Learning* will prove indispensable on this next leg of our journey. Do you have less than 1.5 hours to understand the principles and best practices of developing a private equity investment strategy? Do you want to make informed decisions as a leader? This quick guide is for leaders who are pressed for time and need to know the contours of the right approach to make informed decisions, ask the right questions, understand how to analyze the problem and how to provide guidance and input to their teams. We lay out the business case to encourage target companies to agree to the deal and lead indicators for when a potential target acquisition should be approached. The investment thesis is a guide serving four stakeholders. First, it describes the thinking of the principals who are proposing the investment strategy. In other words, why do they believe this investment strategy will work, and how it will work. Second, it is used within the private equity firm to question the strategy. The more unique the strategy, relative to what competitors are pursuing, the more discussions are needed. Third, it becomes the critical document to raise investment funding and help investors understand the risk tolerance and risk appetite of the fund, as well as their potential exit timelines. Fourth, it is also often used to educate and encourage potential acquisition targets to agree to the deal. Over the past 10 years on StrategyTraining.com and FIRMSconsulting.com, you have seen us help numerous clients solve complex business problems: developing a big data strategy, a corporate strategy, a digital & IT strategy, a pandemic & disaster strategy, a luxury brands strategy, a turnaround & transformation strategy, and more—all based on the combined best practices of the author and the ex-McKinsey, BCG et al., partners who produce all the strategy training programs on StrategyTraining.com. Our quick guides distill the steps, actions, processes and considerations that go into developing a unique investment thesis to drive a private equity strategy. You will understand the logic behind the investment thesis, potential pitfalls and how we use it to filter potential acquisitions. You will understand the output that comes from all the hypotheses, decision trees, and
