Volume 5 (1) of African Languages originally published in 1979, is a special issue focussing on the Bantu languages in Tanzania. The languages are discussed according to 4 regions of Tanzania and although the sub-grouping is lexicostatistical, the classification is borne out by other considerations, such

as phonology and verbal morphology. For the purposes of this volume, originally published in 1954, two southern zones of Bantu have been included - south of the Zambesi and east of the Kalahari. The book discusses the phonetic and morphological characteristics of these 2 zones and a classification of the groups, clusters and dialects is provided. For comparative purposes detailed information on some striking dialectical forms is given in the appendices. The study of Bantu languages of sub-Saharan Africa has provided the basis for significant contributions to research in linguistics. In recent years they have been

used to advance morphological as well as syntactic theory, and in the study of interface relations in grammatical theory. The papers assembled in this volume, contributed by leading scholars in Bantu and general linguistics, deal with various aspects of the structure of Bantu languages. Sam A. Mchombo is assistant professor in the Department of Linguistics at the University of California, Berkeley. Published in 2004, *The Manenguba Languages of Cameroon* is a valuable contribution to the field of African Studies. Written by an international team of experts, this comprehensive volume presents grammatical analyses of individual Bantu

languages, comparative studies of their main phonetic, phonological and grammatical characteristics and overview chapters on their history and classification. It is estimated that some 300 to 350 million people, or one in three Africans, are Bantu speakers. Van de Velde and Bostoen bring together their linguistic expertise to produce a volume that builds on Nurse and Philippson's first edition. *The Bantu Languages*, 2nd edition is divided into two parts; Part 1 contains 11 comparative chapters, and Part 2 provides grammar sketches of 12 individual Bantu languages, some of which were previously undescribed. The grammar

sketches follow a general template that allows for easy comparison. Thoroughly revised and updated to include more language descriptions and the latest comparative insights. New to this edition: • new chapters on syntax, tone, reconstruction and language contact • 12 new sketch grammars • thoroughly updated chapters on phonetics, aspect-tense-mood and classification • exhaustive catalogue of known languages with essential references This unique resource remains the ideal reference for advanced undergraduate and postgraduate students of Bantu linguistics and languages. It will be of interest to

researchers and anyone with an interest in historical linguistics, linguistic typology and grammatical analysis. This book provides the first holistic study of Bantu Authorities (BA), the system South Africa created to implement rural apartheid. Based on interviews with Zulus and former commissioners and archival research, Bantu Authorities proves the primary objective of the system was to protect white capital, with white racial purity secondary. The first major synthesis of African archaeobotany in decades, this book focuses on Paleolithic archaeobotany and the relationship between agriculture and social

complexity. It explores the effects that plant life has had on humans as they evolved from primates through the complex societies of Africa, including Egypt, the Buganda Kingdom, southern African polities, and other regions. With over 30 contributing scholars from 12 countries and extensive illustrations, this volume is an essential addition to our knowledge of humanity's relationship with plants. This volume brings together descriptions and analyses of the conjoint/disjoint alternation, a typologically significant phenomenon found in many Bantu languages. The chapters provide in-depth documentation, comparative

studies and theoretical analyses of the alternation from a range of Bantu languages, showing its crosslinguistic variation in constituent structure, morphology, prosody and information structure. Ellen Ndeshi Namhila is intrigued by the question: Why can the National Archives of Namibia respond to genealogical enquiries of Whites in a matter of minutes with finding estate records of deceased persons, while similar requests from Blacks cannot be served? Not satisfied with the sweeping statement that this is the result of colonialism and apartheid, she follows the track of so-called Native estates through legislation, record

creation and disposal, records management and administrative neglect, authorised and unauthorised destruction, transfer and appraisal, selective processing, and (almost) final amnesia. Eventually she discovers over 11,000 forgotten surviving African estate records but also evidence for the destruction of many others. And she demonstrates the potential of these records to interpret the lives of those who otherwise appear in history only as statistics records which were condemned to destruction by colonial archivists stating they had little research value and no functional value. This study of memory against forgetting is a

call to post-colonial archives to re-visit their holdings and the systemic colonial bias that continues to haunt them. This is the revised version of Ellen Namhila's 2015 doctoral thesis published at the University of Tampere, Finland. Originally published in 1949, this is the first of 2 volumes studying the Bantu tribes inhabiting the westernmost part of Kenya. The book analyses family, lineage and clan structure, kinship relations and the various rituals connected with every stage of the human life cycle. Also included is a section on European colonization and its effects and the magico-religious and ceremonial aspects of tribal life. I've

accepted that this first book is really just a novelty book: the quaint ideas of a bitter Bantu man who cannot let go of the past, the last of those so-called freedom fighters who belong in museums. I imagine this book will end up on the coffee tables of, well, people who have coffee tables. But so be it. I'll happily fade into the background of endless time. But there are some ideas that must just outlive this bitter-souled freedom fighter. Look, it's simple: Mostly you are who you think you are. And when people are actually listening, you are who you say you are. I am Bantu. To me, being Bantu is the epitome of being human. Being Bantu is a glorious gift

that I refuse to squander recklessly in the excesses of modern Western culture. And life really is all just games we all assume we must play. All the smart people know this. It's part of why they are smart. Western culture is just a game. It is one game among many games. It is a game that currently decides the fates of billions of people, yes, but it is just a game. Deeply embedded in the Western culture games is the race game (white people versus everyone else). The race game is still being played globally and locally. The race game, like any other, has its own set of rules, regulations, penalties, and rewards for its players and is sometimes even

fun. But I personally grow tired of Western culture and the race game, especially the part where Bantu people are generally losing. There are other better games to be played. We have choices. These choices are the freedom we fought for. But the Western culture game will need to be dealt with first because it frames a lot of the Bantu neocolonial stories. It frames our post-1994 economic and cultural struggles in South Africa. We cannot ignore it. I thus suggest that we Bantu start looking at ourselves as game changers and not just as late entrants into a long-running oppressive game. After all, this is our life. Our Africa.

Our time. "It is better to die for an idea that will live than to live for an idea that will die" (Steve Biko). This book is about reconstructing the grammar of Proto-Bantu, the ancestral language at the origin of current-day Bantu languages. While Bantu is a low-level branch of Niger-Congo, the world's biggest phylum, it is still Africa's biggest language family. This edited volume attempts to retrieve the phonology, morphology and syntax used by the earliest Bantu speakers to communicate with each other, discusses methods to do so, and looks at issues raised by these academic endeavours. It is a collective effort involving a

fine mix of junior and senior scholars representing several generations of expert historical-comparative Bantu research. It is the first systematic approach to Proto-Bantu grammar since Meeussen's Bantu Grammatical Reconstructions (1967). Based on new bodies of evidence from the last five decades, most notably from northwestern Bantu languages, this book considerably transforms our understanding of Proto-Bantu grammar and offers new methodological approaches to Bantu grammatical reconstruction. Reconstructing Bantu histories of expansion -- Historicizing social values and structures over the longue

durée: lineage, belonging, and heterarchy -- Knowledge: educating the generations -- Inventions of technology and art -- Hospitality How do people whose entire way of life has been destroyed and who witnessed horrible abuses against loved ones construct a new future? How do people who have survived the ravages of war and displacement rebuild their lives in a new country when their world has totally changed? In *Making Refuge* Catherine Besteman follows the trajectory of Somali Bantus from their homes in Somalia before the onset in 1991 of Somalia's civil war, to their displacement to Kenyan refugee camps, to their

relocation in cities across the United States, to their settlement in the struggling former mill town of Lewiston, Maine. Tracking their experiences as "secondary migrants" who grapple with the struggles of xenophobia, neoliberalism, and grief, Besteman asks what humanitarianism feels like to those who are its objects and what happens when refugees move in next door. As Lewiston's refugees and locals negotiate coresidence and find that assimilation goes both ways, their story demonstrates the efforts of diverse people to find ways to live together and create community. Besteman's account illuminates the

contemporary debates about economic and moral responsibility, security, and community that immigration provokes. An illustrated encyclopedia containing articles about ancient civilizations from 6,500 BCE to 500 CE, biographies of people, legendary figures and deities, places, philosophies, religions and mythology, and more. Garvey and Universal Negro Improvement Association Papers. Derek Nurse looks at variations in the form and function of tense and aspect in Bantu, a branch of Niger-Congo, the world's largest language phylum. Bantu languages are spoken in central, eastern, and southern sub-Saharan Africa south of a line between Nigeria and Somalia. By current estimates there are between 250 and 600 of them, as yet neither adequately classified nor fully described. Professor Nurse's account is based on data from more than 200 Bantu languages and varieties, a representative sample of which is freely available on the

publisher's website. He devotes substantial chapters to the analysis and comparison of the different tense and aspect systems found in Bantu. He also examines the verbal categories with which they interact, including negation and focus. Synchronic and diachronic perspectives are interwoven throughout the book. Following a brief history of Bantu over the last five thousand years, the final two chapters look systematically at the history of tense and aspect in Bantu. The first deals with the reconstruction of the earlier forms from which contemporary structures, morphemes, and categories are derived, and the second with

the processes of change, including grammaticalization, by means of which older analytical structures and independent lexical items moved as they became incorporated as grammatical inflections and categories. Dr Crabb's 1965 study of the Ekoid Bantu languages of Ogoja examines these related languages as a basis of comparative historical research. He chose fourteen of these Ekoid languages as representative of a number of languages in the north-west area of Nigeria bordering on the Bantu language area, whose status as Bantu languages has been open to question. This study is based

on extensive field work and presents comparatively the phonologies and selected vocabularies of the languages. First published in 1919, this volume provides a detailed linguistic breakdown of the Bantu language family of Central and Southern Africa. Its author held in-situ expertise in Nanja, Swahili, Zulu, Giryama and Pokomo. A professor of Swahili and Bantu languages, she was the author of several books on Bantu languages and African peoples. The volume aims to depict the broad principles underlying the structure of the Bantu language family and attempts a classification of those languages. Contemporaneous

with the colonization of Tanzania, many of the areas to which this volume was relevant were under British control at the time of publication. Bantu Holomisa is one of South Africa's most respected and popular political figures. Born in the Transkei in 1955, he attended an elite school for the sons of chiefs and headmen. While other men his age were joining Umkhonto weSizwe, Holomisa enrolled in the Transkeian Defence Force and rose rapidly through the ranks. As head of the Transkeian Defence Force, Holomisa led successive coups against the homeland regimes and then became the head of its military government. He turned the

Transkei into a 'liberated space', giving shelter to ANC and PAC activists, and declared his intention of holding a referendum on the reincorporation of the Transkei into South Africa. These actions brought him immense popularity and the military dictator became a liberation hero for many South Africans. When the unbanned ANC held its first election for its national executive in 1994, Holomisa, who had by now joined the party, received the most votes, beating long-time veterans and party stalwarts. He and Mandela developed a close relationship, and Holomisa served in Mandela's cabinet as deputy minister for

environmental affairs and tourism. As this biography reveals, the relationship with both Mandela and the ANC broke down after Holomisa testified before the Truth and Reconciliation Commission, among other issues, that Stella Sigcau and her cabinet colleagues had accepted a bribe from Sol Kerzner. After being expelled from the ANC, Holomisa formed his own party, the United Democratic Movement, with Roelf Meyer. As leader of the UDM, Holomisa has played a prominent role in building coalitions among opposition parties and in leading important challenges to the dominant party. This

biography, written in collaboration with Holomisa, presents an engaging and revealing account of a man who has made his mark as a game changer in South African politics. This book provides a detailed description

of the verb in this language. The topics covered include the complex morphophonological and morphological processes as well as verb-to-verb derivation, copula verbs and grammaticalized verbs of motion. The main body of the book consists of a detailed description of tense, aspect and modality constructions, which includes not only an in-depth discussion of their sentence level semantics, but also of their patterns of employment in discourse. Imperialism, Race and Resistance marks an important new development in the study of British and imperial interwar history. Focusing on Britain, West Africa and South Africa,

Imperialism, Race and Resistance charts the growth of anti-colonial resistance and opposition to racism in the prelude to the 'post-colonial' era. The complex nature of imperial power is explored, as well as its impact on the lives and struggles of black men and women in Africa and the African diaspora. Barbara Bush argues that tensions between white dreams of power and black dreams of freedom were seminal in transforming Britain's relationship with Africa in an era bounded by global war and shaped by ideological conflict.
