Manual for police patrol officers on recognizing, preventing and handling auto thefts. Across the nation in 1972, one out of every 109

registered automobiles was stolen. Auto Theft Investigation was prepared to familiarize the officer on patrol with some of the problems caused by vehicle theft, alert him to indications of tampering, and acquaint him with applicable federal and state laws. Statistics, graphs, and charts are provided to demonstrate the magnitude of motor vehicle theft. Individual chapters discuss categories of auto thieves, modus operandi, completion of stolen vehicle reports, and dissemination of stolen vehicle information. Vehicle embezzlement techniques, such as selling a rented car, are described. Succeeding material covers victim, witness, and suspect

identification, and interview techniques. Stolen vehicle recognition, vehicle recovery, and vehicle identification numbers, including methods of affixing them and detecting alterations or tampering are covered. Body serial numbers, identification number plates, and engine numbers are described and illustrated. An extensive listing of manufacturer identification numbers for 1955-1971 vehicles, including motorcycles, trucks, and trailers is provided. Additional features include sample police record forms, dealer sales reports, registration certificates, and ownership documents. [After payment,

This SAE Recommended Practice establishes procedure for the issuance and assignment of a World Manufacturer Identifier (WMI) on a uniform basis to

vehicle manufacturers who may desire to incorporate it in their Vehicle Identification Numbers (VIN). This recommended practice is intended to be used in conjunction with the recommendations for VIN systems described in SAE J853a, J187, J272b, J273a, J1108, and other SAE reports for VIN systems. These procedures were developed to assist in identifying the vehicle as to its point of origin. It was felt that issuance of the WMI by a single organization would avoid duplication of manufacturer identifiers and assist in the identification of vehicles by agencies such as those concerned with motor vehicle titling and registration,

law enforcement, and theft recovery. Road vehicles, International identification numbers, Fixing, Position This recommended practice describes general characteristics of VIN systems. It includes certain specific requirements, supporting definitions, basic content, and examples. This SAE Recommended Practice has been established to provide direction for the design and installation of a vehicle identification number assigned to a truck or truck-tractor. In adhering to these standards, facility of application in factory production and appearance are matters for manufacturer control. J187 has since been

superseded and covered by US federal regulations. The federal regulations for J187 is 49CFR Part 565. There were Mustangs, and then there were Mustangs. Ford wanted its new little Pony Car to appeal to the masses, and in executing that plan, the Mustang could be had in anything from a plain-Jane version with an economical 6-cylinder engine (often referred to as a "secretary's car"), all the way up to the sporty GT models with optional 271-hp V-8s. Unfortunately, although road-going Mustangs were considered sporty, they were not officially sports cars, at least according to the Sports Car Club of America (SCCA). And Lee Iacocca knew that on-

track performance led to showroom performance, so he needed to go racing. Enter Carroll Shelby. Shelby worked with the SCCA to modify the Mustang to meet the SCCA's requirements and enter the racing arena. The result was the now-legendary Shelby Mustang. This volume of CarTech's In Detail series covers the 1968 Shelby GT350, GT500, and GT500KR. In 1968, Ford sought to take over much of the process of producing Shelby Mustangs and increased that production dramatically to meet anticipated sales demand, so it was a bit of a transition year. In an effort to appeal to muscle car fans rather than race fans, the cars were losing

their edgy race car feel and were becoming more high-end performance road cars with a long list of performance and comfort options including 428 Cobra Jet Engines, automatic transmissions, and air conditioning. They may have no longer been sports cars, but they were now fantastic muscle cars. As in all In Detail Series books, you get an introduction and historical overview, an explanation of the design and concepts involved in creating the car, a look at marketing and promotion, and an in-depth study of all hardware and available options, as well as an examination of where the car is on the market today. Also included is an appendix of

paint and option codes, VIN and build tag decoders, as well as production numbers. The Law Library presents the complete text of the Vehicle Identification Number Requirements (US National Highway Traffic Safety Administration Regulation) (NHTSA) (2018 Edition). Updated as of May 29, 2018 Based on concerns that the supply of unique available Vehicle Identification Numbers is diminishing, NHTSA is proposing to amend the agency's Vehicle Identification Number (VIN) regulation. The amendment would ensure that there will be a sufficient number of unique manufacturer identifiers and

VINs for the current 17-character VIN system to use for at least another 30 years. This NPRM also proposes other changes to the VIN requirements, such as proposing to require that certain vehicle characteristics of low speed vehicles (LSVs) must be reflected in the VIN of LSVs. This rulemaking also responds to a petition for rulemaking from SAE International (SAE). This practice supplements SAE J272c. It applies to characteristics of passenger car descriptive and identifying information which are to be set forth in a uniform

manner in the vehicle identification number. This Standard specifies the content and structure of a Vehicle Identification Number (VIN), so as to establish, on a world-wide basis, a uniform identification numbering system for road vehicles. This Standard also specifies the requirements for the location and marking of the Vehicle Identification Number on vehicles. This Standard applies to the motor vehicles, trailers, motorcycles and mopeds as defined in GB/T 3730.1-2001 and GB/T 5359.1-1996, and other vehicles necessary to have VIN label. This standard specifies the content and composition of world manufacturer identifier

(WMI). The world manufacturer identifier (WMI) is the first part of vehicle identification number (VIN) in GB 16735. This standard is applicable to automobiles as well as incomplete vehicles, trailers, motorcycles and mopeds. It may also serve as a reference for other vehicles to be marked with VINs.
