Originally emanating from presentations at an international conference, this text brings together research and practice development from three perspectives: practice, management and education. Within these three sections the book presents a series of chapters written mainly by practitioners, but some in collaboration with academics. At the end of each section there is a commentary by a practitioner, manager or researcher, which aims to offer a helpful critique on the papers in their section, guiding the reader to consider other areas of research and practice development. At a time when practitioners are being called to produce and use evidence in their practice, this book should offer a valuable contribution to that evidence base. Pediatric oncology is a considerably complex discipline requiring frequent need for reference material. Emergencies in Pediatric Oncology meets this objective by serving as a concise, practical resource for the hurried physician. Replete with diagrams and written in a clear, succinct style, this title offers an easy-to-read guide especially

useful for residents, fellows, and nurses. Providing an overview of the epidemiology of childhood cancer and the history of its treatment, this title also addresses a range of key problems in the pediatric oncologic setting, covering the most common emergencies and providing short, practical guidelines on how to handle them. Written by authorities from an array of disciplines, this helpful resource provides answers and concrete guidance and is a valuable contribution to the literature in pediatric oncology. This is the third edition of a well-received compendium of information and guidance on the diagnosis and management of the various oncological diseases that are encountered in children and adolescents. In the new edition a chapter on Rare Tumors was added. For each disease entity, fundamental facts are provided that will be relevant for a range of professionals - hospital physicians, specialist nurses, psycho-oncologists, physiotherapists, family doctors and pediatricians. Compared with the first edition all chapters have been updated. Throughout, rapid orientation is ensured by the clear, consistent layout and the concise, lucid style. Pediatric Oncology: A Comprehensive Guide is an excellent, easy-to-use reference that belongs on the shelf of every practitioner who encounters or treats malignancies in the pediatric age group. Pediatric Oncology is teamwork! Fundamental facts for all those involved in diagnosis and management - even social worker, pedagogic teachers, religious care persons. In 16 thoughtful meditations, David Metzger, a father and a pediatric oncology nurse, describes the difficult, beautiful, and profound experience of caring for both his patients and his own young children. Metzger brings in the voices of seasoned nurses, young patients, and his patients' parents, each adding a perspective that helps guide him throughout his career. Equally powerful, he invites readers deep into his days, both the joyful and the painful. These experiences plus the familiar struggles and comic blunders of early parenthood result in a moving, sometimes hysterical, often sad, but always honest look at what it truly means to be a caregiver. A unique perspective on the ins-and-outs of working in the medical field, Nurse Papa is not just a book for parents but for anyone who ponders life's big questions. Study faster, learn better, and get top grades Modified to conform to the current curriculum, Schaum's Outline of Pediatric Nursing complements these courses in scope and sequence to help you understand its basic concepts. The book offers extra practice on topics such as health promotion and health problems of children in infancy, early childhood, middle childhood, and adolescence. You'll also get coverage on chronic illnesses and disabilities in children and dysfunctions of the various systems of the body in children. Features: Professional case studies and 122 review questions Comprehensive review of specialized topics such as impact of cognitive or

A variety of frequently encountered situations is covered, including infections, metabolic, cardiopulmonary and neurologic emergencies, tumor lysis syndrome, pain, emesis, mucositis, thrombotic disorders, nutritional problems, hyperleukocytosis and acute abdomen. Throughout the emphasis is firmly on evidenced-based guidance developed from the relevant literature. Information is presented in a manner that will enable readers quickly to locate advice when confronted by a supportive care problem in one of their patients. Helpful algorithms are provided and important "take home points" are highlighted in figures and tables. Supportive Care in Pediatric Oncology will be an invaluable source of assistance for a wide range of health professionals involved in pediatric cancer care. ABSTRACT: A primary function of the pediatric oncology nurse is to provide symptom management to children with cancer. Symptom management strategies have been published, but there is scarce literature examining neither the actual use of these nursing interventions, nor the effects of using these interventions on the nurses' perceived work environment. The purpose of this study was to examine the nursing interventions used in treating pediatric oncology patients' symptoms, as well as the emotional sequelae from providing this care. Phase One of this study examined the content validity of the newly developed Nurses Distress and Interventions for Symptoms Survey (NDISS) utilizing content experts. Phase Two of this study involved both the reliability testing of the NDISS by test-retest and served as a pilot for Phase Three. In Phase Three, a national sample of pediatric oncology nurses was surveyed about their patients' symptoms, the nurses' distress from the symptoms, the nursing interventions used to treat the symptoms, the perceived efficacy of the nursing interventions, and their job satisfaction. The

response rate was 53%, and analysis of study hypotheses were evaluated using Pearson's correlation and multiple regression analyses. The main study variables were not related in the hypothesized direction; therefore four of the six hypotheses were not supported. However, quantity and perceived effectiveness of nursing interventions were both found to act as mediators in the study model, and as a result, these two hypotheses were retained. The results of the survey demonstrated a high frequency of distressing patient symptoms as perceived by nurses (mean 6, range 0-7); nurses rated their distress from these symptoms as moderate (mean 2.9, range 0-4); nurses used an average of 12.7 nursing interventions per symptom (range 0-38); nurses found the nursing interventions moderately effective (mean 2.5, range 0-4); and nurses had moderately high overall job satisfaction (mean 3.9, range 1-5). Although many of the hypotheses were not supported, interesting trends in the data were found. In addition, the findings provided elucidation of specific nursing interventions used by pediatric oncology nurses as well as a description of the effects of providing patients' symptom management, including nurses' distress, perceived effectiveness of nursing interventions, and job satisfaction. Pediatric oncology nurses face many challenges when caring for terminally ill children, supporting parents, dealing with work related stress, and grief. Carroll-Johnson (2006), editor of the Nursing Oncology Forum stated the present need to understand the development of oncology nurses of this generation. This qualitative study examines the phenomena of new pediatric oncology nurses to better understand their experiences. It presents a closer look into their lives by sharing a qualitative insight into the work they do. This study utilized Parse's human becoming theory to create meaning in the lived experience of being a new pediatric oncology nurse. In doing so, the following themes were identified: (a) Stressed and Overwhelmed, (b) Not Knowing, (c) Boundaries, (d) Tasks, (e) Support System, (f) Not Understood, (g) Relationship with Peers, (h) Balance, (i) Hurting Children, (j) Keeping Parents in the Know, (k) Positive Perceptions. This new edition of Handbook of Pediatric Hematology and Oncology: Children's Hospital & Research Center Oakland features practical guidance on how to handle common inpatient and outpatient challenges seen in pediatric hematology and oncology. Designed as a rapid reference to the latest diagnostic and therapeutic protocols, the text is short and didactic and supplemented with practical algorithms and case studies throughout. Completely revised and updated, there are brand-new chapters on subjects including bone marrow transplantation, pain management and palliative care. Comprehensive, yet concise, the handbook presents essential guidelines on the diagnosis and management of the most common pediatric blood disorders and malignancies, in addition to chemotherapeutic drug information and transfusion protocols. Designed for medical students, residents, and fellows, this user-friendly portable reference is also the perfect companion on the ward for pediatric hematology and oncology nurses. This book is a comprehensive guide that will help medical professionals - pediatric oncologists,

nurses, pediatricians, family practitioners, internists, radiation oncologists, surgeons - to understand and manage the long-term effects of treatment for childhood and adolescent cancer. The consequences of treatment are described for each organ system, with explanation of pathophysiology, clinical manifestations, detection and screening and management. Disease- and organ-based algorithms of care and tables designed to facilitate the assessment of late effects are highlights of the book and will assist in the provision of hands-on care that is up to date and geared to clinical need. Among the other topics addressed are stem cell transplantation, psychological care, legal issues, transition to adulthood and methodological issues in the study of survivorship care. Pediatric Oncology Nurse Oncologist Nursing Pediatric Nurse Notebook P: Pediatric Nursing Care: A Concept-Based Approach teaches undergraduate nursing students the need to know information for working in a pediatric nursing environment. Content specific to cancer in adolescents has been interspersed into this edition, highlighting the differences in child and adolescent cancer and treatment. In addition to discussing common and rare diseases chapter-by-chapter, this text addresses professional practice issues such as interdisciplinary collaboration, research, and ethics, as well. Actual case studies and accompanying patient photographs highlight the personal approach that is needed in child and adolescent cancer nursing. This book presents the current state of the nursing science in topics relevant to the care of pediatric oncology patients and their families across the treatment trajectory and is framed within a precision health framework. The spectrum of topics covered is wide, including, for example, symptom management, self-care management, exercise and physical activity, family-centered care, palliative care, the role of the nurse in treatment decision making, patient and nurse resiliency, survivorship, and genetic counseling. Throughout, there is a focus on the implications of research for nursing practice, highlighting which elements of the available evidence are ready for translation into practice and which are not. In addition, careful attention is paid to the role that nursing can play in further advancing science through clinical research. The authors are leading experts from across the globe. The book will be of special interest for pediatric oncology nurses, including direct care nurses, research nurses, and nursing leaders, and will also be a stimulating source for researchers and non-oncology nurses. This 21st volume of the Annual Review synthesizes nursing research to date on child health and illness, including family issues. Ages range from pre-term babies to adolescents, with a focus on chronic illness. A special final chapter reviews the highlights of the past 10 volumes of the Annual Review of Nursing Research, to mark the 20th anniversary of the Review. This is the second edition of a well-received compendium of information and guidance on the diagnosis and management of the various oncological diseases that are encountered in children and adolescents. For each disease entity, fundamental facts are provided that will be relevant for a range of professionals - hospital physicians, specialist

nurses, psycho-oncologists, physiotherapists, family doctors, and pediatricians. Compared with the first edition, all chapters have been updated and entirely new chapters are included on rare disorders, genetic aspects, and palliative care. Throughout, rapid orientation is ensured by the clear, consistent layout and the concise, lucid style.
