Green Diesel: An Alternative to Biodiesel and Petrodiesel Oct 30 2022 This book covers the entire spectrum of green diesel and their applications in existing CI engines. This book discusses how a green diesel is a better fuel than biodiesel and petrodiesel and more suitable fuels for sustainable future development. The book begins with a concise overview of the fundamentals of the green diesel properties, preparation, and characterization of green diesel using hydroprocessing technology. The book covers recent developments in the domain of green diesel derived particularly from the second-/third-generation feedstocks. Various topics covered in this book include the catalysts involved in the processing of green diesel, characterization of the products as per ASTM/EN protocols. In addition, the book also illustrates characteristic features of green diesel and how it is different from biodiesel and petrodiesel. Other chapters cover performance and emission characteristics of green diesel in CI engines and techno-economic analysis. Moreover, the current status of green diesel industries is also incorporated. This book is of particular interest to graduate students and academic or industrial researchers/professionals working in the area of green diesel/green energy, bioenergy and mechanical, automobile, and chemical engineering. This book makes a forceful foundation for the establishment of green diesel refineries/biorefineries for a sustainable, cleaner, and greener future.

Modern Diesel Technology: Light Duty Diesels Oct 06 2020 MODERN DIESEL TECHNOLOGY: LIGHT DUTY DIESELS, Second Edition, provides a thorough introduction to the light-duty diesel engine, the engine of choice to optimize fuel efficiency and longevity in workhorse pickup trucks, refrigeration units, agricultural equipment and generators. While the major emphasis is on highway usage, best-selling author Sean Bennett also addresses current and legacy, small stationary and mobile off-highway diesels. Using a modularized structure, Bennett helps readers achieve a strong conceptual grounding in diesel engine technology while emphasizing hands-on technical competency. The text explores current diesel engine subsystems and management electronics in detail, while also providing a solid foundation in mechanical engine systems. All generations of CAN-bus technology are covered, including the basics of network bus troubleshooting. The author uses simple language to make even complex concepts easier to master and focuses on helping readers gain the knowledge and expertise they need for career success as diesel technicians, including addressing ASE A9 task learning objectives in detail. Alternative Diesel Fuels Jun 01 2020 A key topic of many technical discussions has been the development of alternative fuels to power the compression ignition engine. Reasons for this include the desire to reduce the dependency on petroleum-based fuel and, at the same time, to reduce the particulate matter (PM) and NOx emissions. Also, there has been interest generated in the diesel engine because of the reduction in greenhouse gases that has been proposed during the 2008-2012 time frame in Europe and the regulations that affect diesel engines in the United States.

The B T H and North British Type 1 Bo-Bo Diesel-Electric Locomotives - British Railways Classes 15 and 16 May 05 2023 The British Railways 'Pilot Scheme' orders of 1955 included ten BTH and ten NBL Type 1 locomotives, these being introduced during 1957-61 for use in East London, and on the Great Eastern and London, Tilbury & Southend lines. The BTH fleet subsequently expanded to forty-four, as a consequence of their light axle-loading and the availability of spare manufacturing capacity which BR chose to exploit in their quest to eliminate steam traction. Further construction of these two classes ceased after the fifty-four units, with preference being given to the highly reliable English Electric product which by mid-1962 had proliferated to 128 examples. The NBL fleet survived until 1968, being withdrawn after ten years of indifferent performance. The BTH locomotives followed by 1971, although four lingered on as carriage pre-heating units. Dramatic reductions in goods traffic during the 1960s/70s particularly impacted local trip and transfer freight duties, the 'bread and butter' work for the Type 1s, and it was inevitable that the less successful classes were retired from traffic first. This book looks at the short history of these two classes, making extensive use of archive sources, combined with the primary observations of numerous enthusiasts. Previously unpublished information, covering the introduction, appearance design and performance issues of the locomotives, form a central focus, and, allocations, works histories, storage and disposals, liveries and detail differences are covered in the same level of detail as previous volumes in the 'Locomotive Portfolio' series.
