is an important scientific tool used to identify different organisms based on the organism's background. Scientists have catalogued 1.5 million species on earth and estimate that there might be as many as 100 million more. In preparation, the instructor will use dichotomous keys. Dichotomous keys are used to identify objects or organisms based on a series of choices between two characteristics. It can help students to develop critical thinking and problem-solving abilities and also help them to gain a deeper understanding of a subject area. A dichotomous key is a series of statements consisting of two choices that describe characteristics of the unidentified organism. The user has to make a choice of which of the two statements best describes the unknown organism. Then, based on that choice, they move to the next set of statements, ultimately ending in the identity of the unknown.
