"If it is beyond your power to control, let it go." "Do not wish that all things will go well with you, but that you will go well with all things." "In this way, you will overcome life's challenges, rather than be overcome by them." Epictetus (c. AD 50-135) was a former Roman slave who became a great teacher, deeply influencing the future emperor Marcus Aurelius among many others. His philosophy, Stoicism, was practical, not theoretical--aimed at relieving human suffering here and now. Epictetus knew suffering--besides being enslaved, he was lame in one leg and walked with a crutch. The Manual is a collection of Epictetus' essential teachings and pithy sayings, compiled by one of his students. It is the most accessible and actionable guide to Stoic philosophy, as relevant today as it was in the Roman Empire. This new edition, published by Ancient Renewal, is rendered in contemporary English by Sam Torode.

Increasingly, electroconvulsive therapy (ECT) is recognized as a proven, effective, and even life-saving intervention in certain mood and thought disorders when other treatments have had little or no effect. Despite the proven efficacy and safety of this standard treatment in psychiatry, its availability is variable. Part of this disparity in access is related to misunderstanding by laypersons regarding the treatment and its potential adverse effects. Adequate education and training of psychiatrists and their support staff are essential to ensuring patients' access to this vital treatment tool. The authors of Clinical Manual of Electroconvulsive Therapy offer this expansive yet reader-friendly volume to help psychiatrists successfully incorporate ECT into their clinical practices. Currently, it is estimated that more than 100,000 people receive ECT treatments each year in the U.S. Indications for use of ECT are for mood disorders such as major depressive disorder and mania, and thought disorders including schizophrenia and schizoaffective disorder. Indications for use in other psychiatric disorders and general medical disorders such as Parkinson's disease, which appears to respond especially well to ECT, are reviewed as well. For twenty years this book, now in its 5th edition, has provided information on adverse drug interactions that is unrivalled in coverage and scholarship. Adverse drug reactions, many of them ascribable to interactions with other drugs or with chemical substances in food or the environment, are thought to cause or complicate one in twenty of hospital admissions. The book is conveniently divided into two parts: Part 1 comments on drug interactions and their mechanisms, on a pharmacokinetic and pharmacodynamic level, while Part 2 consists of drug interaction tables, divided and subdivided into categories of disorders, and the drugs used in the treatment of these disorders. If safety in drugs is to improve, education of prescribers is vitally important. This book, with its up-to-date and coordinated approach, serves that purpose well. The real threat, as the authors remind us, is the ignorance of practitioners, not the drug itself. The volume is therefore an essential addition to the shelves of those responsible for the prescription of drugs, in order to prevent a potential backlash when used in combination with other drugs or chemical substances.
