AND IF YOU DO FALL IN LOVE, WATCH YOUR MOUTH. Few books about life inside the Central Intelligence Agency have been written by women, and none have the wit, suspense, and authenticity of Loose Lips, Claire Berlinski's dazzling first novel about a love affair between intelligence officers. New Yorker Selena Keller has just completed a doctorate in Oriental studies. Unemployed and dismayed by her dull job prospects, she sends her résumé to the CIA on a whim. Within weeks, she is contacted by an Agency recruiter, who asks her how she would feel about convincing another human being to commit treason. Despite her checkered past, Selena passes the background investigation, the polygraph, and a battery of bizarre CIA aptitude tests. Living under cover as a government budget analyst, she begins her education in espionage at the Farm, the CIA's covert facility. All CIA officers must survive a demanding training program, and it is there that Selena becomes romantically involved with Stan, a brilliant but darkly paranoid fellow student with presidential ambitions. What happens next is a fascinating inside portrait of the Agency—how spies are recruited, how they are trained, who they meet, where they go, and most important . . . what happens when they fall in love, and begin spying on one another. A wonderful, pitch-perfect roman à clef that blends satire, romance, and suspense, Loose Lips offers a unique insight into the culture of the CIA. THE EARTHQUAKE "Tom, we're having a problem with the gyro-stabilizer," said Mark Faber, gray-haired president of the Faber Electronics Company. "Hope you can find out what's wrong." The eighteen-year-old inventor accepted the challenge with a smile. "I'll be glad to try, sir," he replied. Bud Barclay, a dark-haired young flier and Tom Swift Jr.'s closest friend, chuckled. "If anyone can get the bugs out of your new invention, genius boy here will do it!" The two boys followed Mr. Faber and his engineers to a wooden building which was tightly guarded. Inside, a secret rocket-telemetering device was mounted on its test stand. "As you know, Tom," Mr. Faber began, "the usual conditions of rocket flight will be-" He broke off with a gasp of astonishment as the whole building suddenly began to shake. "Good grief!" Bud exclaimed. "This isn't part of your testing routine, is it?" His question was drowned out by cries of alarm and the sound of cracking glass. The walls and roof were shuddering and creaking, and the concrete floor was heaving under their feet. "Look out! The test stand's breaking loose!" Tom warned. Mr. Faber and two of his men tried frantically to brace the heavy test stand which held the telemetering device. Another engineer rushed toward the door to see what was happening outside. Before he reached it, another shock knocked all of them off their feet. Electronic equipment cascaded from the wall shelves, and a heavy-duty chain hoist came loose from its overhead track, plunging to the floor with a terrifying crash. "An earthquake!" Tom gasped. Bud, meanwhile, clawed a handhold on a wire screen enclosing an air compressor and pulled himself to his feet. But the next moment a third, more violent tremor rocked the building, knocking him over. "The roof! It's caving in!" he heard someone scream. As his eyes flashed upward in panic, Bud caught a brief glimpse of the ponderous test stand with the priceless telemeter tilting to one side. An instant later it crashed over, pinning Mark Faber beneath it! Bud threw up his arms to protect himself, but too late! A falling beam caught him on the back of the head and the young flier blacked out. For minutes, no one stirred among the wreckage. Then Tom, who had been stunned by some falling debris, raised himself to a sitting position. "Good night!" Tom's eyes focused in horror on the wreckage enveloped by still-billowing dust. The sky was visible through several gaping holes in the roof, which was sagging

dangerously on its supporting trusses. Only two thirds of the walls were still standing. Suddenly Tom stiffened in fear. "Bud!" The young inventor had just noticed his friend lying pinned beneath a heavy beam nearby. Was he still breathing? Disregarding his own injuries, Tom hastily freed himself from the debris and groped his way to Bud's side. With a desperate heave, he shoved the beam away, then cradled Bud's head in his arm. His friend's eyelids flickered. "Are you all right?" Tom asked fearfully. The answer came in a groan....

Protecting 18 million United States health care workers from infectious agents - known and unknown - involves a range of occupational safety and health measures that include identifying and using appropriate protective equipment. The 2009 H1N1 influenza pandemic and the 2014 Ebola virus outbreak in West Africa have called raised questions about how best to ensure appropriate and effective use of different kinds of personal protective equipment such as respirators, not only to promote occupational safety but also to reduce disease transmission. The Use and Effectiveness of Powered Air Purifying Respirators in Health Care is the summary of a workshop convened by the Institute of Medicine Standing Committee on Personal Protective Equipment for Workplace Safety and Health to explore the current state of practices and research related to powered air purifying respirator (PAPRs) and potential updates to performance requirements. Presentations and discussions highlighted current health care practices using PAPRs and outlined the research to date on the use and effectiveness of PAPRs in health care settings with a focus on the performance requirements. The Use and Effectiveness of Powered Air Purifying Respirators in Health Care focuses on efficacy, current training, maintenance, supplies, and possible enhancements and barriers to use in inpatient, clinic, nursing home, and community (home) settings. This report also explores the strengths and weaknesses of using various approaches to health care PAPER standards. The Boys' Adventure Megapack collects 20 great adventure stories for boys, from classics like "The Call of the Wild" to war stories like the adventures of Dave Dawson, from science fiction like Tom Swift, Jr. to historical fiction like Tarzan of the Apes and The Count of Monte Cristo. Rollicking adventure stories for the young and young at heart! Included are: THE CALL OF THE WILD, by Jack London TREASURE ISLAND, by Robert Louis Stevenson KIDNAPPED, by Robert Louis Stevenson THE SWISS FAMILY ROBINSON, by Johann David Wyss FIVE CHILDREN AND IT, by E. Nesbit TOM SWIFT AND THE VISITOR FROM PLANET X, by Victor Appleton II TOM SWIFT AND THE ELECTRONIC HYDROLUNG, by Victor Appleton II TARZAN OF THE APES, by Edgar Rice Burroughs THE RETURN OF TARZAN, by Edgar Rice Burroughs DAVE DAWSON AT DUNKIRK, by R. Sidney Bowen DAVE DAWSON WITH THE R.A.F., by R. Sidney Bowen DAVE DAWSON ON THE RUSSIAN FRONT, by R. Sidney Bowen DAVE DAWSON ON GUADALCANAL, by R. Sidney Bowen DAVE DAWSON AT CASABLANCA, by R. Sidney Bowen DAVE DAWSON AT TRUK, by R. Sidney Bowen DAVE DASHAWAY AND HIS HYDROPLANE, by Roy Rockwood ADRIFT IN THE WILDS: THE ADVENTURES OF TWO SHIPWRECKED BOYS, by Edward S. Ellis AMONG MALAY PIRATES, by G. A. Paints and their allied products like varnishes, enamels, pigments, printing inks and synthetic resins protect assets from corrosion. These are increasingly being used in automotive, engineering and consumer durable sectors. Paint testing can be done in a number of different ways. The fact of the matter is that many industries use several different paint testing methods in order to ensure accurate results. Paint should be tested in a wet form for particular properties but also in the dry form. Testing of paints generally falls into three categories: testing of the raw materials, testing of the finished product and performance testing using accelerated weathering and other simulation type methods of evaluation. Coatings technologists deal with interfaces of all classes gas liquid as in an aerosol spray liquid liquid, as in an emulsion gas solid, as in a dry pigment before its immersion in a vehicle liquid solid, as in a pigment dispersion and solid solid, as when the crystal faces of two different pigment particles are in tight contact. Paint scientists are particularly interested in the formation of liquid solid interfaces that are stable in the package, that is, in the permanent replacement of the air at the air solid interface of the pigment by the

vehicle to give the liquid solid interface of the dispersion. In coatings and similar products, the criteria for best performance particulate ingredients; inorganic, organic, extender and metallic flake pigments and dispersed phase of latexes depends on the size and shape of particles composing the particulate materials. The purpose of paint testing is to help and ensure that the minimum requirements for ingredients and material characterization are met by the manufacturer on a batch basis, and to help ensure that the formulated product will provide satisfactory performance in the environment. Handbook on Paint Testing Methods explains about aspect of gloss, specular glass, sheen, contrast gloss, absence of bloom gloss, distinctness of image gloss, specular gloss evaluation, specular reflectance, geometric considerations, instrumentation, goniophotometers, specular glossmeters, basic factors producing hiding power, refractive indexes of white pigments, refractive indexes of organic pigments, films for testing preparation of films for test, pigments and extenders, metallic flake pigments, latexes, methods for determining particle, treatment of data, particle size with light microscope etc. This handbook elaborates the different testing methods of paints with an understanding of the various tests that can be performed on product performance. This handbook will be very helpful to its readers who are related to this field and will also find useful for upcoming entrepreneurs, existing industries, technical institution, etc.
