Hard Questions on Global Educational Change Jan 24 2023 This new book, from internationally renowned education scholar Pasi Sahlberg and his colleagues, focuses on some of the most controversial issues in contemporary education reform around the world. The authors devote a chapter to each of these “hard questions”: Does parental choice improve education systems?Is there a future for teacher unions?What is the right answer to the standardized testing questionCan schools prepare children for the 21st-century workplace?Will technology save

schools? Can anyone be a teacher? Should higher education be for the public good? What knowledge and skills should an educator have? Each educational change question sheds much-needed light on today's large-scale education policies and related reforms around the world. The authors focus on what makes each question globally significant, what we know from international research, and what can be inferred from benchmark evidence. The final chapter offers a model for policymakers with implications for teaching, learning, and schooling overall. "This is an impressive and engaging book. If you care about the impacts of technology, testing, and teacher education designs, then this book will stretch your thinking and challenge your assumptions." —Andy Hargreaves, Boston College "Fascinating case studies open up our imaginations and provide clues for the most sustainable pathways forward for educators in the years to come." —Dennis Shirley, Boston College "Features enlightening chapters with an international perspective for educators and teacher educators alike. Highly recommended." —David C. Berliner, Arizona State University

Justice, Crime, and Citizenship in Eurasia May 04 2021 What role does law play in post-communist societies? This book examines the law as a social institution in Eurasia, exploring how it is shaped in everyday interactions between state and society, organisations and individuals, and between law enforcement and other government entities. It bridges the gap between theoretically rich work on law-in-action and the empirical reality of Eurasia. The contributions in this volume include research on policing, the legal profession, public attitudes towards law, regime support and oppositional mobilisation, crime policy, and property rights, among others. The studies shift away from the common perception that, in Eurasia, the law exists only as a tool for the state to enforce order and suppress dissent. Instead, they show, through empirical analyses, that citizens evade, use, reinterpret and shape the law even in authoritarian contexts—sometimes containing state violence and challenging the regime, and other times reinforcing state capture from below. The chapters in this book were originally published as a special issue of the journal *Europe-Asia Studies*.

Support Not Surveillance: How to solve the teacher retention crisis Jan 12 2022 Why are so many teachers leaving the profession increasingly early in their careers? What harm is being done to pupils' educational prospects by persistent teacher shortages? Why are teachers held uniquely responsible for the effects of poverty on children's progress and attainment? What are the unintended consequences of rushed government education policy-making? And what can be done about all of the above? Supported by the latest international and national evidence, Support Not Surveillance seeks to address these important questions. Laying bare how the inadequacy of Westminster policies is compounded by an unfair Ofsted inspection regime, Dr Mary Bousted draws on her years of expertise and access to decision-makers to expose the gap between ministerial rhetoric and the daily reality encountered by teachers in their classrooms across England. Ending on a set of proposals to move beyond the seemingly perennial crisis in teacher recruitment and retention, Support Not Surveillance is an unflinching call to end the failed experiment of government interventionism in classrooms.

Although organized A-to-Z, front matter includes a Reader's Guide grouping entries thematically to help students interested in a specific aspect of education research, measurement, and evaluation to more easily locate directly related entries. Back matter includes a Chronology of the development of the field; a Resource Guide to

classic books, journals, and associations; and a detailed Index. Entries conclude with References/Further Readings and Cross References to related entries. The Index, Reader's Guide themes, and Cross References will combine to provide robust search-and-browse in the e-version.

The WholeWorld is Texting Nov 10 2021 The authors of this volume address multiple questions involving the nature of youth protest in the twenty-first century. Through their use of a case study approach, they comment upon the ways in which youth protest has been influenced by the electronic and social media and evaluate the effectiveness of protest activities, many of which were framed in reaction to neo-liberalism and state authoritarianism. A number of the authors further comment upon the utility of employing social movement theory to analyze the nature and character of protest actions, while others situate such events within specific political, social and cultural contexts. The case studies focus upon protest activities in Bahrain, Turkey, Iran, Cambodia, South Africa, China, Russia, Chile, Spain, and the U.S., and together, they offer a comparative analysis of an important global phenomenon. In so doing, the authors further address issues involving the changing nature of globalized protest participation, its immediate and long-term consequences, and the ways in which protests have encouraged a re-evaluation of the nature of inequality, as constructed within educational, social, and political spheres.

The Education Invasion Feb 13 2022 Most Americans had no idea what Common Core was in 2013, according to polls. But it had been

creeping into schools nationwide over the previous three years, and children were feeling its effects. They cried over math homework so mystifying their parents could not help them, even in elementary school. They read motley assortments of “informational text” instead of classic literature. They dreaded the high-stakes tests, in unfamiliar formats, that were increasingly controlling their classrooms. How did this latest and most sweeping “reform” of American education come in mostly under the radar? Joy Pullmann started tugging on a thread of reports from worried parents and frustrated teachers, and it led to a big tangle of history and politics, intrigue and arrogance. She unwound it to discover how a cabal of private foundation honchos and unelected public officials cooked up a set of rules for what American children must learn in core K–12 classes, and how the Obama administration pressured states to adopt them. Thus a federalized education scheme took root, despite legal prohibitions against federal involvement in curriculum. Common Core and its testing regime were touted as “an absolute game-changer in public education,” yet the evidence so far suggests that kids are actually learning less under it. Why, then, was such a costly and disruptive agenda imposed on the nation’s schools? Who benefits? And how can citizens regain local self-governance in education, so their children’s minds will be fed a more nourishing intellectual diet and be protected from the experiments of emboldened bureaucrats? *The Education Invasion* offers answers and remedies.

Statistics Using Technology, Second Edition Oct 29 2020 *Statistics With Technology, Second Edition*, is an introductory statistics textbook. It uses the TI-83/84 calculator and R, an open source statistical software, for all calculations. Other technology can also be used besides the TI-83/84 calculator and the software R, but these are the ones that are presented in the text. This book presents probability and statistics from a more conceptual approach, and focuses less on computation. Analysis and interpretation of data is more important than how to compute basic statistical values.

Technology and Testing Mar 26 2023 From early answer sheets filled in with number 2 pencils, to tests administered by mainframe computers, to assessments wholly constructed by computers, it is clear that technology is changing the field of educational and psychological measurement. The numerous and rapid advances have immediate impact on test creators, assessment professionals, and those who implement and analyze assessments. This comprehensive new volume brings together leading experts on the issues posed by technological applications in testing, with chapters on game-based assessment, testing with simulations, video assessment, computerized test development, large-scale test delivery, model choice, validity, and error issues. Including an overview of existing literature and ground-breaking research, each chapter considers the technological, practical, and ethical considerations of this rapidly-changing area. Ideal for researchers and professionals in testing and assessment, *Technology and Testing* provides a critical and in-depth look at one of the most pressing topics in educational testing today.

Who Gets In? Jun 24 2020 On the disputed topic of U.S. college admissions, everyone agrees that this high-stakes competition is unfair. But few agree on what a fair process would be.
