Krampus: Shadow of Saint Nicholas Jul 18 2022 YOU BETTER WATCH OUT... KRAMPUS IS COMING TO TOWN. Ancient folklore warns of a mythical counterpart to Santa Claus, who punishes naughty children every Christmas... his name is KRAMPUS. Michael Dougherty presents the official graphic novel based on his festive horror comedy, which expands the mythology of this iconic terror with an anthology of three deliciously twisted morality tales that will leave you praying you are not on the naughty list. At the most wonderful time of the year, a drunken mall Santa comes under siege from some very mischievous Christmas spirits, a dysfunctional cop becomes trapped with the man who ruined his life and the wealthy town "scrooge" must face the shadows from his past as his home comes under invasion from the homeless. This Christmas, Krampus will make sure they all get what they deserve. Michael Dougherty, the writer/director behind cult horror hit *Trick 'r Treat*, is joined by a fantastic team of creators, uniting Krampus co-screenwriters Zach Shields and Todd Casey and artists Fiona Staples (*Saga*), Christian Dibari (*Hoax Hunters*), Maan House (*Witchblade*), and Stuart Sayger (*Bram Stoker's Death Ship*) to deliver a twisted gift for the holiday season.

Cognitive and Working Memory Training Jul 26 2020 Cognitive and Working Memory Training assembles an interdisciplinary group of distinguished authors--all experts in the field--who have been testing the efficacy of cognitive and working memory training using a combination of behavioral, neuroimaging, meta-analytic, and computational modelling methods. This edited volume is a defining resource on the practicality and utility of the field of cognitive training research in general, and working memory training in particular. Importantly, one focus of the book is on the notion of transfer--namely, the extent to which cognitive training--be it through music, video-game play, or working memory demanding interventions at school--generalizes to learning and performance measures that were decidedly not part of the training regimen. As most cognitive scientists (and perhaps many casual observers) recognize, the notions of cognitive training and transfer have been widely controversial for many reasons, including disagreement over the reliability of outcomes and consensus on methodological "best practices," and even the ecological validity of laboratory-based tests. This collection does not resolve these debates of course; but its contribution is to address them directly by creating an exchange in a single compendium among scientists who, in separate research publications, do not always reach the same conclusions. The book is organized around comprehensive overview chapters from different disciplinary perspectives--Cognitive Psychology (by Hicks and Engle), Neuroscience (by Kuchinsky and Haarmann), and Development (by Ling and Diamond)--that define major issues, terms, and themes in the field, with a pointed set of challenge questions to which other scientists respond in subsequent chapters. The goal of this volume is to educate. It is designed for students and researchers, and perhaps the armchair psychologist. Crucially, the contributors recognize that it is good for science to persistently confront our understanding of an area: Debate and alternative viewpoints, backed by theory, data, and inferences drawn from the evidence, is what advances scientific knowledge. This book probes established paradigms in cognitive training research, and the long-form of these chapters (not found in scientific journals) allows detailed exploration of the current state of the science. Such breadth intends to invite novel ways of thinking about the nature of cognitive and perceptual plasticity, which may enlighten either new efforts at training, new inferences about prior results, or both.
