**Access by Design** Feb 20 2022 In just over a decade, the Web has evolved from an experimental tool for a limited community of technically inclined people into a day-to-day necessity for millions upon millions of users. Today's Web designers must consider not only the content needs of the sites they create, but also the wide range of additional needs their users may have: for example, those with physical or cognitive disabilities, those with slow modems or small screens, and those with limited education or familiarity with the Web. Bestselling author Sarah Horton argues that simply meeting the official standards and guidelines for Web accessibility is not enough. Her goal is universal usability, and in *Access by Design: A Guide to Universal Usability for Web Designers*, Sarah describes a design

methodology that addresses accessibility requirements but then goes beyond. As a result, designers learn how to optimize page designs to work more effectively for more users, disabled or not. Working through each of the main functional features of Web sites, she provides clear principles for using HTML and CSS to deal with elements such as text, forms, images, and tables, illustrating each with an example drawn from the real world. Through these guidelines, Sarah makes a convincing case that good design principles benefit all users of the Web. In this book you will find: Clear principles for using HTML and CSS to design functional and accessible Web sites Best practices for each of the main elements of Web pages—text, forms, images, tables, frames, links, interactivity, and page layout Seasoned advice for using style sheets that provide flexibility to both designer and user without compromising usability Illustrations of actual Web sites, from which designers can model their own pages Instructions for providing keyboard accessibility, flexible layouts, and user-controlled environments Practical tips on markup, and resources

*Access to Health Care in America* Mar 04 2023 Americans are accustomed to anecdotal evidence of the health care crisis. Yet, personal or local stories do not provide a comprehensive nationwide picture of our access to health care. Now, this book offers the long-awaited health equivalent of national economic indicators. This useful volume defines a set of national

objectives and identifies indicators that measure of utilization and outcome that can "sense" when and where problems occur in accessing specific health care services. Using the indicators, the committee presents significant conclusions about the situation today, examining the relationships between access to care and factors such as income, race, ethnic origin, and location. The committee offers recommendations to federal, state, and local agencies for improving data collection and monitoring. This highly readable and well-organized volume will be essential for policymakers, public health officials, insurance companies, hospitals, physicians and nurses, and interested individuals. *Amendments to Access and Privacy Legislation Welcomed by Information and Privacy Commissioner* May 26 2022

**Access to Higher Education** Aug 29 2022 How do we understand and explain who has access to higher education? How do we make sense of persisting and new forms of inequality? How can global, national and institutional policymakers and practitioners make higher education more inclusive? *Access to Higher Education: Theoretical perspectives and contemporary challenges* seeks to update thinking on these questions, combining new voices and emerging perspectives with established writers in the field. This pioneering text highlights the contribution of social theory to issues of access to education, with chapters introducing and drawing on the works of key interdisciplinary thinkers including Pierre Bourdieu, Margaret Archer, Amartya Sen and Herbert Simon. It then moves to examine how theoretical perspectives can be applied to the contemporary challenges of forging more equal access, with examples drawn from a wide range of contexts, including the UK, the US, Australia, South Africa and Japan. Global in scope, this book documents the shared nature of the access challenge in a period when higher education is growing rapidly, but inequalities continue to be stark. It concludes by proposing a new direction for research and a reassertion of the role of the researcher as a social activist for disconnected and disadvantaged groups, equipped with the thinking tools needed to move the agenda forward. *Access to Higher Education* is a rigorous text for the global research community, with relevance to policymakers, practitioners and postgraduate students interested in social justice and social policy. It provides those with an academic interest in access and a commitment to enhancing policy with theoretical and practical ideas for moving the access agenda forward in their institutional, regional or national contexts.

### **Access and Control in Digital Humanities**

Jul 04 2020 Access and Control in Digital Humanities explores a range of important questions about who controls data, who is permitted to reproduce or manipulate data, and what sorts of challenges digital humanists face in making their work accessible and useful. Contributors to this volume present case studies and theoretical approaches from their experience with applications for digital technology in classrooms, museums, archives, in the field and with the general public. Offering potential answers to the issues of access and control from a variety of perspectives, the volume acknowledges that access is subject to competing interests of a variety of stakeholders. Museums, universities, archives, and some communities all place claims on how data can or cannot be shared through digital initiatives and, given the collaborative nature of most digital humanities projects, those in the field need to be cognizant of the various and often competing interests and rights that shape the nature of access and how it is controlled. Access and Control in Digital Humanities will be of interest to researchers, academics and graduate students working in a variety of fields, including digital humanities, library and information science, history, museum and heritage studies, conservation, English literature, geography and legal studies.

Digital Libraries: Universal and Ubiquitous Access to Information Jun 14 2021 This book constitutes the refereed proceedings of the 11th International Conference on Asian Digital Libraries (ICADL 2008) held in Bali, Indonesia, in December 2008. The objective of this conference series is to provide a forum for presentation of high-quality research in the field of digital libraries. ICADL 2008 provided an opportunity for digital libraries researchers and practitioners in the Asia Pacific area and beyond to gather to explore ideas, exchange and share experiences, and further build the

research network in this region. ICADL 2008 was a truly international event, with presenters from 21 countries. A total of 63 papers were accepted for inclusion in the proceedings: 30 full papers, 20 short papers, and extended abstracts of 13 posters. Submissions were subject to a rigorous, blind peer-review process. The research topics cover the spectrum of digital libraries, including multimedia digital libraries, usability and evaluation, information retrieval, ontologies, social tagging, metadata issues, multi- and cross-language retrieval, digital preservation, scholarly publishing and communities, and more. Additionally, three tutorials were offered in association with the conference by Andreas Rauber (Vienna University of Technology), David Bainbridge (University of Waikato), and George Buchanan (Swansea University).
