The new memoir tracing story of cycling since the 1980s, through the eyes of Jonathan Vaughters, founder of team Education First and one of the sport's most towering figures. Jonathan Vaughters' story is the story of modern cycling. From his early years as a keen cyclist in his hometown in Colorado to his unflinching rite of passage as a professional rider with US Postal to his elevation as one of cycling's most resilient, ethical and intelligent team bosses, the highs and lows of his career have mirrored those of the sport itself. Vaughters has had a front-row seat for most of the major events in cycling over the past three decades. He was both a former teammate of Lance and a leading witness against him. And he went on to renounce doping and start the first pro cycling team to dedicate itself to clean riding, which has grown into one of the most successful teams competing today and started a movement that has swept across the sport. This is also not simply a story of races won and lost: Vaughters shows readers how he navigated the complex, international business of building Slipstream into a world-class cycling team. Over the past decade, he has led the sport out of the scandal-plagued Armstrong era. By presenting the world with a team made of talented racers built around a rigorous approach to clean racing, he set a new standard within cycling that has since spread across the peloton. Written from the unique perspective of both a racer and a team manager, One-Way Ticket gives the complete story of what it takes to build a winning team and repair the reputation of a sport. This book constitutes the proceedings of the 8th International Conference on Rigorous State-Based Methods, ABZ 2021, which was planned to take place in Ulm, Germany, during June 6-11, 2021. The conference changed to an online format due to the COVID-19 pandemic. The 6 full and 8 short papers included in this volume were carefully reviewed and selected from 18 submissions. The proceedings also include 3 PhD symposium contributions. They deal with state-based and machine-based formal methods, mainly Abstract State Machines (ASM), Alloy, B, TLA+, VDM, and Z. The two parts of the present volume contain extended conference abstracts corresponding to selected talks given by participants at the "Conference on Geometric Analysis" (thirteen abstracts) and at the "Conference on Type Theory, Homotopy Theory and Univalent Foundations" (seven abstracts), both held at the Centre de Recerca Matemàtica (CRM) in Barcelona from July 1st to 5th, 2013, and from September 23th to 27th, 2013, respectively. Most of them are brief articles, containing preliminary presentations of new results not yet published in regular research journals. The articles are the result of a direct collaboration between active researchers in the area after working in a dynamic and productive atmosphere. The first part is about Geometric Analysis and Conformal Geometry; this modern field lies at the intersection of many branches of mathematics (Riemannian, Conformal, Complex or Algebraic Geometry, Calculus of Variations, PDE's, etc) and relates directly to the physical world, since many natural phenomena possess an intrinsic geometric content. The second part is about Type Theory, Homotopy Theory and Univalent Foundations. The book is intended for established researchers, as well as for PhD and postdoctoral students who want to learn more about the latest advances in these highly active areas of research.
