This volume includes the transcript of the U.S. Congress subcommittee hearing held in June 2003 that discussed the status of the compound methyl bromide as it pertains to the Montreal Protocol and the Clean Air Act. The Montreal Protocol on Substances that Deplete the Ozone Layer is an international treaty designed to protect the ozone layer by phasing out the production of numerous substances believed to be responsible for ozone depletion. The Clean Air Act is a U.S. federal law designed to control air pollution on a national level. Methyl bromide (MeBr) is an odorless, colorless gas that has been used as a soil fumigant and structural fumigant to control pests across a wide range of sectors. Because MeBr depletes the stratospheric ozone layer, the amount of MeBr produced and imported in the U.S. was reduced incrementally until it was phased out completely by January 1, 2005, pursuant to the U.S.'s obligation under the Montreal Protocol and the Clean Air Act. Each book explains how young students can use simple tools to explore the world around them. With simple sentences and colorful photographs, this series corresponds directly to science standards. Red tape, like "politics" or "public interest," is one of those terms everyone knows, but for which there is surprisingly little shared meaning. Is red tape perceptual or objective? Is it neutral, or negative, or can red tape even be positive? Does it necessarily entail delays? Does red tape equate with bad management? Does it flow from rules or are rules themselves red tape? Barry Bozeman, author of the classic *Bureaucracy and red tape*, and Mary Feeney re-examine these questions and more with a new focus on their application to public management. --Publisher description.

Hundreds of hazardous waste sites are on the Superfund National Priority List in the United States, and thousands more could become eligible. The Superfund has spent or ordered the spending of billions of dollars, with little apparent impact on human health risks. While public perception of the real or imagined hazardous nature of consumer and industrial substances has resulted in widespread attention to the issue, lawsuits have proliferated with liability aimed at "deep pockets" instead of individual agents who may be responsible. Contributors to *Cutting Green Tape* carefully examine the existence and severity of the toxic harms and liability problem, the erosion

of a clear tort legal system to settle disputes, and whether a clearly defined system of property rights could be developed to reduce the dangers from toxic substances. Cutting Green Tape rethinks the nature and impact of today's environmental bureaucracy. Rather than continue unworkable, cumbersome, and often contradictory regulations, Cutting Green Tape prescribes a clearer tort legal system to settle disputes and demonstrates that clearly defined environmental property rights would reduce the threat of toxic substances. Among the many topics addressed are: air toxins policy; pollution, damages, and tort law; risk assessment, insurance, and public information; protecting groundwater; regulation of carcinogens; contracting for health and safety; and toxin torts by government. The book converges on a central theme: when common law remedies, with their burden of proof and standards of evidence, are replaced by the legislatively mandated regulatory regimes described, a problem emerges. The bureaucratic "tunnel vision" described by Justice Stephen Breyer, tends to take over. The police powers of the state are given to bureaucratic decision makers who are limited only by the blunt instrument of political influence, rather than by the need to show harm or wrongdoing in an unbiased court (as the police are), or by a budget on expenditures set by the Congress (as most bureaus are). The excesses described in the chapters thus result not from incompetence in the bureaus, but from the expansive powers granted to decision makers who are tightly focused on the narrow mission they see before them.
