Peking Jun 27 2020 The central character in Susan Naquin's extraordinary new book is the city of Peking during the Ming and Qing periods. Using the city's temples as her point of entry, Naquin carefully excavates Peking's varied public arenas, the city's transformation over five centuries, its human engagements, and its rich cultural imprint. This study shows how modern Beijing's glittering image as China's great and ancient capital came into being and reveals the shifting identities of a much more complex past, one whose rich social and cultural history Naquin splendidly evokes. Temples, by providing a place where diverse groups could gather without the imprimatur of family or state, made possible a surprising assortment of community-building and identity-defining activities. By revealing how religious establishments of all kinds were used for fairs, markets, charity, tourism, politics, and leisured sociability, Naquin shows their decisive impact on Peking and, at the same time, illuminates their little-appreciated role in Chinese cities generally. Lacking most of the conventional sources for urban history, she has relied particularly on a trove of commemorative inscriptions that express ideas about the relationship between human beings and gods, about community service and public responsibility, about remembering and being remembered. The result is a book that will be essential reading in the field of Chinese studies for years to come.

Documenting Software Architectures Nov 25 2022 Architecture is crucial to the success of any large software system -- but even a superb architecture will fail if it isn't communicated well. Now, there's a language- and notation-independent guide to capturing architecture so it can be used successfully by every analyst, software designer, and developer. The authors review the diverse goals and uses of software architecture documentation, providing documentation strategies for several common scenarios. They identify the basic unit of software architecture documentation: the viewtype, which specifies the type of information to be provided in an architectural view. For each viewtype -- Modules, Component-and-Connectors, and Allocation -- they offer detailed guidance on documenting what really matters. Next, they demonstrate how to

package architecture documentation in coherent, usable form: augmenting architectural views with documentation of interfaces and behavior; accounting for architectural variability and dynamic systems; and more.

Dynamic Documents with R and knitr Mar 05 2021 The cut-and-paste approach to writing statistical reports is not only tedious and laborious, but also can be harmful to scientific research, because it is inconvenient to reproduce the results. Dynamic Documents with R and knitr introduces a new approach via dynamic documents, i.e. integrating computing directly with reporting. A comprehensive guide to the R package knitr, the book covers examples, document editors, basic usage, detailed explanations of a wide range of options, tricks and solutions, extensions, and complete applications of this package. The book provides an overview of dynamic documents, introducing the idea of literate programming. It then explains the importance of dynamic documents to scientific research and its impact on reproducible research. Building on this, the author covers basic concepts, common text editors that support knitr, and the syntax for different document formats such as LaTeX, HTML, and Markdown before going on to discuss core functionality, how to control text and graphics output, caching mechanisms that can reduce computation time, and reuse of source code. He then explores advanced topics such as chunk hooks, integrating other languages such as Python and awk into one report in the knitr framework, and useful tricks that make it easier to write documents with knitr. Discussions of how to publish reports in a variety of formats, applications, and other tools complete the coverage. Suitable for both beginners and advanced users, this book shows you how to write reports in simple languages such as Markdown. The reports range from homework, projects, exams, books, blogs, and web pages to any documents related to statistical graphics, computing, and data analysis. While familiarity with LaTeX and HTML is helpful, the book requires no prior experience with advanced programs or languages. For beginners, the text provides enough features to get started on basic applications. For power users, the last several chapters enable an understanding of the extensibility of the knitr package.

R Packages May 27 2020 Turn your R code into packages that others can easily download and use. This practical book shows you how to bundle reusable R functions, sample data, and documentation together by applying author Hadley Wickham's package development philosophy. In the process, you'll work with devtools, roxygen, and testthat, a set of R packages that automate common development tasks. Devtools encapsulates best practices that Hadley has learned from years of working with this programming language. Ideal for developers, data scientists, and programmers with various backgrounds, this book starts you with the basics and shows you how to improve your package writing over time. You'll learn to focus on what you want your package to do, rather than think about package structure. Mormonism and Evolution May 19 2022 The Church of Jesus Christ of Latter-day Saints (the Mormon Church) has generally been viewed by the public as anti-evolutionary in its doctrine and teachings. But official statements on the subject by the Church ' s highest governing quorum and/or president have been considerably more open and diverse than is popularly believed. This book compiles in full all known authoritative statements (either authored or formally approved for publication) by the Church ' s highest leaders on the topics of evolution and the origin of human beings. The editors provide historical context for these statements that allows the reader to see what stimulated the issuing of each particular document and how they stand in relation to one another.
