Insights for today's hot stocks, and winning strategies for tomorrow's, from Wall Street's #1 Tech Analyst This is not your grandpa's Wall Street. Stocks are more volatile now than ever. Even with all their potential for meteoric success, high tech investments are synonymous with high risk. This entertaining primer, by one of the leading tech analysts on Wall Street, offers a practical step-by-step guide for identifying tomorrow's hot stocks today. Why do certain technology companies succeed while others falter and disappear? Which businesses will rule the post-PC era? Kwatinetz discusses what's coming down the pike in the next few years and who the key players will be. He shows how to filter out the noise, and come up with an independent assessment of how much a stock is worth, and reveals ten rules of thumb that will help investors build a powerful portfolio. When Mohamed Noorani writes, he uses the nom de plume of Sandy Parr. Sandy Parr writes mostly on golf. He loves golf, but he is not the typical, ardent, or fanatic golfer who habitually watches the World Golf Ranking. Instead, Sandy spends his time writhing and agonising just to understand why the incorrigible weekend golfers (including him) find it so hard to shave off their handicap. He never pretends that he has the answer, or is even near to it. Nonetheless, he knows from observation that the touring pros are way ahead of the weekend golf nuts, simply because of their prowess in reaching the greens in regulation, their superiority in the delicate chipping and pitching shots, and their confidence in putting. In other words, the pros are superior in everything. This book is a compilation of what Sandy Parr had noted about golf as seen from the eyes of a weekend golfer. Sandy would advise that the easiest shots to shave off your score are found in the short game. Chipping, pitching, and putting don't require tremendous swing speed or physical ability. Plus, they can be practiced in your backyard or living room. Having a reliable tee shot that land in the fairway is important as well. Finding the short grass off the tee is much more important than distance, especially for high handicappers. The use of natural fibres as reinforcements in composites has grown in importance in recent years. Natural Fibre Composites summarises the wealth of significant recent research in this area. Chapters in part one introduce and explore the structure, properties, processing, and applications of natural fibre reinforcements, including those made from wood and cellulosic fibres. Part two describes and illustrates the processing of natural fibre composites. Chapters discuss ethical practices in the processing of green composites, manufacturing methods and

compression and injection molding techniques for natural fibre composites, and thermoset matrix natural fibre-reinforced composites. Part three highlights and interprets the testing and properties of natural fibre composites including, non-destructive and high strain rate testing. The performance of natural fibre composites is examined under dynamic loading, the response of natural fibre composites to impact damage is appraised, and the response of natural fibre composites in a marine environment is assessed. Natural Fibre Composites is a technical guide for professionals requiring an understanding of natural fibre composite materials. It offers reviews, applications and evaluations of the subject for researchers and engineers. 12%-15% per annum, it houses over 50,000 manufacturers and employees of over 40 lakh workers in the plastics industry. Polymers are chemical compounds whose molecules are very large, often resembling long chains made up of a seemingly endless series of interconnected links. The size of these molecules, as is explained in chemistry of industrial polymers, is extraordinary, ranging in the thousands and even millions of atomic mass units. Polymers have found uses in all spheres of life with demand for better materials, greater functional utility, more economical packaging and versatile and durable all-weather products. The per capita consumption of polymers in India is around 5.5 kg. The Government of India has prepared an ambitious plan to achieve a ten-fold increase in plastic exports (from \$ 25 mn to 250 mn) to the US. Polyethylene terephthalate is a thermoplastic polymer resin of the polyester family and is used in synthetic fibers; beverage, food and other liquid containers; thermoforming applications; and engineering resins often in combination with glass fiber. PET in its natural state is a colorless, semi-crystalline resin. Based on how it is processed, PET can be semi-rigid to rigid, and it is very lightweight. It makes a good gas and fair moisture barrier, as well as a good barrier to alcohol and solvents. Poly (vinyl chloride), is the third-most widely produced polymer, after polyethylene and polypropylene. PVC comes in two basic forms: rigid (sometimes abbreviated as RPVC) and flexible. The rigid form of PVC is used in construction for pipe and in profile applications such as doors and windows. It is also used for bottles, other non-food packaging, and cards (such as bank or membership cards). It can be made softer and more flexible by the addition of plasticizers, the most widely used being phthalates. Around 1.1 Million Metric Tons, out of which, Polyvinyl chloride (PVC) accounts for 0.36 Million Metric Tons, Polypropylene (PP) 0.27 Million Metric Tons and Polyethylene (PE) 0.46 Million Metric Tons. The quantum of imports increased further to 1.8 MMT with imports of Polyvinyl chloride (PVC), Polypropylene (PP) and Polyethylene (PE) rising to 0.70, 0.43 and 0.62 MMT. Replicating the growth in gross domestic product, polymer demand in India grew from 3.459 Million Metric ton per annum (MMtpa) in 2000 to 9.013 MMtpa in 2011 at a Compound Annual Growth Rate (CAGR) of 9.1%. Strong growth in the packaging sectors will drive the demand further to 14.315 MMtpa in 2016. To meet this growing demand, India increased its polymer production from 3.568 MMtpa in 2000 to 7.377 MMtpa in 2016. With an increase in demand the polymer consumption is expected to double by 2020, to about 20 million metric tons. Disposable is the ability of something to be disposed of or thrown away after use. A disposable (also called disposable product) is a product designed for a single use after which it is recycled or is disposed as solid waste. The term often implies cheapness and short-term convenience rather than medium to long-term durability. Polystyrene is a synthetic aromatic polymer made from the monomer styrene. Polystyrene can be solid or foamed. General purpose polystyrene is clear, hard, and rather brittle. It is an inexpensive resin per unit weight. It is a rather poor barrier to oxygen and water vapor and has a relatively low melting point. Polystyrene is one of the most widely used plastics, the scale of its production being several billion kilograms per year. India is growing at an average annual rate of 7.6% for the past five years and it is expected to continue growing at an equal if not faster rate. The rapid economic growth is increasing and enhancing employment and business opportunities and in turn increasing disposable incomes. As households with disposable incomes from Rs 200,000 to 1,000,000 a year comprises about 50 million people, roughly 5% of the population at present. By 2025 the size of middle class will increase to about 583 million people, or 41% of the population. The size of the Indian medical device industry will jump to INR 761 billion by 2017 registering a CAGR of 20% during 2012-17. The content of the book includes information about plastic. The major contents of this book are project profiles of projects like Plastics and Polymers Industry in India, Disposable Plastic Syringes, Flexible Polyurethane Foam, PVC Wires & Cables, Disposable Dishes, Knife, Fork & Cutlery Items (Spoon)Thermacol Cups, Glass and Plates, Pet Bottle from Pet Resin, PVC Flex Banner (Front Lit, Backlit & Vinyl),Wood Plastic Composite (WPC),HDPE/PP Woven Sacks, Pet Bottle Recycling, Plastic Injection, Moulded Products (Buckets, Tumblers, Tubs & Toilet Bowl Cleaning Brush),Disposable Plastic Cups, Plates & Glasses. A lifeless newborn baby is found discarded in a motel Dumpster. Authorities quickly arrest the infant's teenage parents, charging them with murder. Did Amy Grossberg and Brian Peterson, in fact, murder their own baby? Tammy Wynette died suddenly at a relatively young age, and yet no autopsy was performed? Was someone trying to hide the real cause of death? Did Sam Sheppard (later dubbed "The Fugitive" based on a television series) really kill his wife? And if not, who committed the murder? Things are not always as they appear, as world-renowned forensic pathologist Dr. Cyril Wecht shows in this riveting behind-the-scenes look at nine famous cases. In the nationally known baby case involving Amy Grossberg and Brian Peterson, Dr. Wecht reviews the evidence and comes to a startling conclusion. In fascinating detail, he demonstrates how the tools of forensic pathology often uncover murky, long-hidden secrets that crack seemingly unsolvable crimes. Writing in the first-person Dr. Wecht leads you into the heart of the investigation, focusing each chapter on a single engrossing drama. He reveals the most startling evidence that shows why JonBenet Ramsey's killer most likely came from within her home, why O.J. Simpson probably had an accomplice in the murder of Nicole Simpson and Ron Goldman, shocking revelations about Robert Berdella's grisly torture and sex-abuse crimes against young men, and many intriguing facts about other infamous cases. If you find the fictional plots of such dramas as C.S.I. exciting, you will be amazed by the true stories told by Dr. Wecht, with the help of two top-flight veteran reporters, Greg Saitz and Mark Curriden, in this amazing real-life thriller. As this intriguing page-turner proves, the science of forensic pathology has changed the face of detective work forever.

NIIR had identified some Hi-Tech Projects for the entrepreneurs and published a book on that projects which titled "Detailed Projects Profile on Selected Hi-Tech Projects". These Hi-tech projects are Aluminium Beverages cans, Beer industry, Compact Disc, Lap Top computers, Optical fibre cables, plastic I. V. Bottles, Solar Power Plant, Telephone Cables and XLPE cables. All the above projects are based on latest technologies. Each project present with uses and application, market position, manufacturing process, flow diagram. Suppliers of machineries and raw material along with cost estimation. These hi-tech projects have bright market potential and demand would be increased. This book is very informative and useful for relevant entrepreneurs. What does AT&T, MCI, Sprint, PageNet, MobileCom, GTE, Cellular One, Skytel, Mototola, Compaq, and Dell Computers have in common? They were all victims of America's largest Hi-Tech criminal organization that call themselves Hi-Tech Hustlers. This organization that is responsible for over \$500 million dollars in theft, corporate losses and damages in the 12 year span. It was not until one of the founders of the organization, Gregory Evans was caught and indicted by the U.S. Attorney's Office for hacking and defrauding AT&T, MCI, Sprint and many others for more than \$24 million in a 6 month Hi-Tech crime spree. While behind bars, Gregory Evans had written some personal memoirs about his Hi-Tech organizations and the Hi-Tech capers that cost companies and consumers millions of dollars. This book has words misspelled and bad grammar because it was originally typed on a jailhouse type writer, and later typed word for word for the entire world to read. This exciting book reads like a blockbuster movie, even though names, dates and places have been changed to protect the guilty you will find yourself mesmerized, dazzled and entertained. This title familiarizes the non-specialist with alternative sources of energy, pointing out their advantages and disadvantages. The appropriate principles of physics and

chemistry involved in each alternative is presented in an easily digestible manner.
