User manuals, reference guides, project documentation, equipment specifications and other technical documents are increasingly subjected to high quality standards. However, it is not clear whether research efforts are keeping pace with this increasing importance of documentation quality. This volume includes studies from researchers as well as practitioners, exemplifying three approaches towards document quality: - Product-orientation, with an eye for usability in various manifestations such as tutorials, concept definitions, tools for users of documentation to find information, methods of eliciting user feedback, and cultural differences; - Process-orientation, in which the quality of technical documentation is regarded as an outgrowth of a process involving sub-steps such as storyboarding, pre-testing and use of automation tools in writing and producing documents; - Professional orientation, in which attention is focused on those who create technical documentation. The volume will be of interest to a broad audience of writers, managers and trainers with technical and non-technical backgrounds, such as: quality managers; communication managers; technical communicators; trainers in computer usage; teachers, researchers and students of (technical) communication. Since the internet speeds went above the 500kbps mark, the number of things people can do with their interconnected devices skyrocketed. Automated homes, connected cars, and internet enabled TVs. The latter is what threatens to revolutionize the entertainment world as we know it, do away with cable TV and abolish the need for expensive blue-ray players. Even though smart TVs are so lucrative, most people find them either too costly, or limiting. The alternative would be going for a TV with an HDMI port, a USB port and purchasing a dongle to bring in the power of internet TV. Chromecast is one of the best and cheapest such tools in the market.

Why should you consider purchasing one? What makes the Amazon Tap different from other Amazon Alexa-enable products? If you have read the other manuals written on this subject, you know that the Amazon Echo and Amazon Echo Dot are both devices that stay in one place while you are using them. You can take them to a new place and use them there; however, they need to be connected to Wi-fi in order to access Alexa and other features. You will need to find a nearby plug; the Echo and Echo Dot are not devices that can be used on-the-go. The Tap is powered by its battery, meaning that if it is charged, you don't need to have it plugged in. Because the Tap does not need to be plugged in and you can connect it to mobile hotspots, you can virtually transport this device to any place you can get cellphone signal. You can turn on your cellphone's mobile hotspot feature and connect your Tap to the hotspot. This means that you can stream music on an excellent speaker when you are outside- at the park, at the beach, at a picnic. Your imagination is your limit. Additionally, because the Tap is built with Dolby, the music does not get fuzzy when you turn it up. Many speakers can become fuzzy and unclear the louder you turn up the volume. The Tap keeps streaming your music clearly no matter how high you turn it. If you specifically want to have Alexa in your devices, but you also want to have a great speaker, then you are left with the Amazon Echo and the Tap. The Tap is the cheaper of those options, giving you both a great speaker and the Alexa feature. The Echo Dot gives you the Alexa feature, but it does not have a music built for streaming music.
