**best textbooks. To solve this problem, every book in the Step-By-Step series contains hundreds of problems with both answers and detailed, worked solutions. In this volume, Step-By-Step: Calculus, each of the major concepts in a standard Calculus course is given its own section and problems. After a list of the problems for a concept, the answers are given so that students can compare their answers to the correct ones. Following the answers are detailed, worked solutions to each problem. The answers are given first because many students do not want to see a worked solution immediately upon finding that their answer is not the correct one. At the end of the book are two Final Exams that test whether or not the student has grasped all of the concepts in the book. Because students must be able to solve problems regardless of the order that they appear on their college/high school exams, the Finals are not in the same order as that given in the Table of Contents. The first Final Exam groups concepts that are similar (although not in the same order as presented in the book) and the second Final Exam completely randomizes the concepts and problems. As with every other problem in the Step-By-Step series, both answers and solutions to all Final Exam questions are included in the book.**

**Relationship Between Students' Formative Exam-Taking Strategies and Summative Exam Scores Mar 18**

**2022 This study explored graduate students' formative exam-taking strategies in an online classroom. Research questions were: (1) What formative test-taking strategies did students use? (2) Were the strategies related to the students' final exam scores? Students (N=50) in a semester-long measurement class took weekly formative 20-item, multiple-choice exams. Students' options were: (1) using a printable copy to guide their reading then entering their answers in an identical answer sheet for scoring, and/or (2) using only the answer sheet interactively until reaching mastery. Data were the number of times students' entered answers to reach mastery and their final exam scores. Correlation between the number of times students took the exams (summed across 16 weeks) and their final exam scores was  $r_s = 0.68$ . (Contains 4 tables.).**
