Author supplied keywords: Toilet training; Foucault; Discourse; Genealogy. Please note that the content of this book primarily consists of articles available from Wikipedia or other free sources online. Pages: 36. Chapters: Biopower, Carceral archipelago, Disciplinary institution, Dispositif, Foucauldian discourse analysis, Francois Ewald, Governmentality, Herculine Barbin: Being the Recently Discovered Memoirs of a Nineteenth-century French Hermaphrodite, Panopticism, What Is an Author?. Excerpt: "Biopower" is a term coined by French scholar, historian, and social theorist Michel Foucault. It relates to the practice of modern nation states and their regulation of their subjects through "an explosion of numerous and diverse techniques for achieving the subjugations of bodies and the control of populations." Foucault first used the term in his lecture courses

at the College de France, but the term first appeared in print in *The Will To Knowledge*, Foucault's first volume of *The History of Sexuality*. In Foucault's work, it has been used to refer to practices of public health, regulation of heredity, and risk regulation, among many other regulatory mechanisms often linked less directly with literal physical health. It is closely related to a term he uses much less frequently, but which subsequent thinkers have taken up independently, biopolitics. For Foucault, biopower is a technology of power, which is a way of managing people as a group. The distinctive quality of this political technology is that it allows for the control of entire populations. It is thus an integral feature and essential to the workings of—and makes possible—the emergence of the modern nation state and capitalism, etc. Biopower is literally having power over bodies; "an explosion of numerous and diverse techniques for achieving the subjugations of bodies and the control of populations." Foucault elaborates further in his lecture courses on Biopower entitled *Security, Territory, Population* delivered at the College de France between January and April 1978. It... Sara Mills offers an accessible and comprehensive analysis of the term 'discourse' and explores the theoretical assumptions underlying it. This handy, easy to follow pocket guidebook for students provides: straightforward working definitions historical developments of the term studied analysis of Michel Foucault discussion of the appropriation of the term 'discourse' by feminist, colonial and post-colonial discourse theorists examples of literary and non-literary texts to illustrate the use of 'discourse'. Using the work of Foucault, this study examines changing notions of the self and identity and how psychological and sociological discourses have conceptualized and constituted adolescence/youth as the primary client in school counseling. Case studies of mental hygiene films in the United States and a moral panic in New Zealand are used to examine how youth were morally constituted in the postwar period—a time when guidance counseling emerged in Western countries such as the United States, the United Kingdom, Australia, Canada, and New Zealand. The author uses Foucault's notion of governmentality to critically examine how counseling professionalized itself as a disciplinary body. The way in which the crowd is constructed has been shown to be the site of power struggles between the status quo and political change. However, there is little qualitative research on how crowd members construct their experiences of participation in crowd activity. This study examines how the crowd in the Tahrir square sit-in during the 2011 Egyptian revolution was constructed by crowd members themselves. Based on semi-structured interviews with five Egyptian demonstrators regarding their experiences of this sit-in, a Foucauldian discourse analysis indicated that crowd members were subject to a set of discourses that served to normalise or problematise the crowd by

constructing its processes as either compatible or problematic compared with the values of the neoliberal agenda respectively. Drawing on Foucault's ideas on governmentality, the discursive repertoires available to crowd members were shown to regulate the ways in which they constructed their subjectivity and social action, governing their conduct in line with the neoliberal ideal of the autonomous, responsible individual. It was shown that in constructing crowd self-regulatory practices, crowd members legitimised or resisted techniques of social control internal to the crowd that limited their ability to bring about political change. Possible recommendations for crowd activism and implications for research are discussed. This research explores the construction of professional identities and subjectivities of former international pharmacy graduates or IPGs. It is a study of the reprofessionalization of pharmacy practice in the Canadian context and the resocialization of IPGs into a profession that is in transition. My thesis adopts a bricolage approach in which I theorize professional identity construction through the theoretical lenses of Michel Foucault, Stuart Hall, Judith Butler and the race and space literature. These related theories facilitate the understanding of professional identity construction through the take up of professional discourses and the 'translation' experiences of internationally-trained professionals navigating discursive border crossings while integrating into the host country's labour market. A Foucauldian governmentality approach was employed to analyze an archive of professional journals to determine how the profession governs its members to become the 'right' type of pharmacist at this time in the profession's history. I also analyzed interview data from 17 participants examining the multiple discourses that former IPGs adopt to construct their professional subjectivities. The study reveals that former IPGs readily take up professional discourses in becoming a 'Canadian' pharmacist and that the process of identity construction for racialized professionals requires conducting oneself 'professionally' when managing racist encounters in the workplace. This case study introduces the reader to Foucauldian discourse analysis as applied to a cross-cultural project around young women's constructions of the human papillomavirus vaccine. We introduce common qualitative research approaches in psychology. We discuss two main types of Discourse Analysis in psychology and why a Foucauldian discourse analysis was adopted here. In this case, we examine examples of our data according to Carla Willig's approach to Foucauldian discourse analysis using six stages: discursive constructions, discourses, action orientation, positionings, practice, and subjectivity. Finally, we consider the main limits and strengths with a Foucauldian discourse analysis. The field of curriculum inquiry has grown rapidly over the last four decades resulting in many new forms of curriculum inquiry to be used as tools to answer unique

curriculum-related research questions. There are few texts available that include concise descriptions and elements of curriculum inquiry methodologies and directed at enabling researchers to wisely choose a form of curriculum inquiry most appropriate for their study. *Conceptual Analyses of Curriculum Inquiry Methodologies* presents chapters that are each devoted to a particular form of inquiry, with a conceptual analysis of the methodology, its purpose(s), its utilization, structure, and organization, all written by scholars with firsthand experience with the form of inquiry. These experts also take the liberty of citing examples of published studies that have utilized the methodology, share the types of relevant data collection instruments and forms of data produced, and also share research questions that can be answered via their form of inquiry. Covering topics such as quantitative methods of inquiry, glocalization, and educational criticism, this is an essential text for curriculum designers, doctoral students, doctoral researchers, university faculty, professors, researchers, and academicians. This case study is a reflection on the process and challenges of undertaking a Foucauldian discourse analysis for my professional doctorate in Counselling Psychology. The research explored how four general practitioners and counseling psychologists were constructing "medically unexplained symptoms" and what might be the possible implications. As part of the process of designing and structuring this research, I had to make many decisions along the way, such as decisions about what topic I would explore, what stance I would take, the method of analysis, the interview format, the structure of the chapters, and how to describe the discourses I identified. This case study reflects on this process and identifies several likely implicit influences on my decision-making that impacted significantly on the research, yet only became apparent toward the end of the research process. These include the influence of a traditional, positivist academic discourse, a personal need for structure and coherence, an avoidance of complexity and some parallels between researching, working with and experiencing medically unexplained symptoms. The complexity surrounding medically unexplained symptoms that motivated me to undertake this research was mirrored in many of the challenges faced as part of doing the research. Nevertheless, it became apparent that it was necessary to explore, rather than avoid or simplify, this complexity. Process-oriented supervision played a valuable role in understanding this. This study of Anglo-American legal discourse is the first comprehensive discourse analysis of American legal language in its prototypical setting, the trial by jury. With ethnographic data gathered in a civil jury trial, the book compares the discourse processing of the legal participants and the lay jurors in the trial. This study, examining an entire trial, finds that it is constraints at the level of a Foucauldian discursive

formation that prevent lay understanding. Those constraints include the allocation of narrative speaking roles primarily to legal speakers in genres in which no sworn evidence is given, the suppression of narrative in ordinary witnesses, a set of restraints on witnesses' use of certain categories of evidentials, the legal topic originating in textual authority unknown to the lay participants, specific distribution of verb forms by legal genre, and a linguistic "burden" accompanying the legal "burden of proof" in the requirement that the lawyer of the moving party also use and explain technical legal terms to the jury at the same time as he or she presents evidence. All of these factors contribute to the incomprehensibility of legal discourse to lay auditors, resulting in the jury making their decision based on a commonsense script of the events precipitating the trial. The study concludes by arguing for a Foucauldian discourse analysis of institutional languages, a social theory powerful enough to account for the power and tenacity of these languages, where traditional linguistic explanation has failed. This title was first published in 2000. Exploring issues surrounding the constitution of managerial knowledge, newer forms of organizational control, identity and gender, this book sheds light on the implications of the discursive construction of 'financial services' as a cohesive entity in the United Kingdom in the last 15 years. It develops a form of critical analysis which can bridge the gap between large-scale cultural and economic shifts and the conduct of managers, employees and consumers within these networks of power. Michel Foucault has become famous for a series of books that have permanently altered our understanding of many institutions of Western society. He analyzed mental institutions in the remarkable *Madness and Civilization*; hospitals in *The Birth of the Clinic*; prisons in *Discipline and Punish*; and schools and families in *The History of Sexuality*. But the general reader as well as the specialist is apt to miss the consistent purposes that lay behind these difficult individual studies, thus losing sight of the broad social vision and political aims that unified them. Now, in this superb set of essays and interviews, Foucault has provided a much-needed guide to Foucault. These pieces, ranging over the entire spectrum of his concerns, enabled Foucault, in his most intimate and accessible voice, to interpret the conclusions of his research in each area and to demonstrate the contribution of each to the magnificent -- and terrifying -- portrait of society that he was patiently compiling. For, as Foucault shows, what he was always describing was the nature of power in society; not the conventional treatment of power that concentrates on powerful individuals and repressive institutions, but the much more pervasive and insidious mechanisms by which power "reaches into the very grain of individuals, touches their bodies and inserts itself into their actions and attitudes, their discourses, learning processes and everyday lives"

Foucault's investigations of prisons, schools, barracks, hospitals, factories, cities, lodgings, families, and other organized forms of social life are each a segment of one of the most astonishing intellectual enterprises of all time -- and, as this book proves, one which possesses profound implications for understanding the social control of our bodies and our minds. Both 'discourse' and 'knowledge' are fundamental concepts, but they are often treated separately. The first book to adopt a multidisciplinary approach to studying the relationship between these concepts, *Discourse and Knowledge* introduces the new field of epistemic discourse analysis and uses a wide range of examples to illustrate the theory. Instructors - Electronic inspection copies are available or contact your local sales representative for an inspection copy of the print version. *Discursive Psychology* is a theoretical and analytical approach used by academics and practitioners alike, widely applied, though often lost within the complicated web of discourse analysis. Sally Wiggins combines her expertise in discursive psychology with her clear and demystifying pedagogical approach to produce a book that is committed to student success. This textbook shows students how to put the methodology into practice in a way that is simple, engaging and practical. A systematic introduction to discourse analysis as a body of theories and methods for social research. Introduces three approaches and explains the distinctive philosophical premises and theoretical perspectives of each approach. The institution of disability, as it is perceived in the United States and most of Western civilization, signifies a site of oppression that has been historically neglected if not actively rejected by the hegemonic population of nondisabled people. While disability studies has congregated as a concerted effort of academic inquiry, scholars have largely approached disability from cultural and sociological perspectives and have focused on physical rather than cognitive disabilities. The field of rhetoric, as the study of discourse and its relation to the production and reception of meaning, offers vital perspectives for better understanding the institution of disability and may serve as a framework for first illuminating and then disempowering the discursive structures that have heretofore suggested that people with disabilities are deviant and inferior. This exposition aims to trace how and in what contexts the concept of disability has been formed as a rhetorical object via Foucauldian discourse analysis. The findings of this research elucidate how the disabled person has come to be known as a subject of the domain of disability through discursive knowledge-power relations. Though a rhetorical analysis may not alleviate the physical, intellectual, or emotional obstacles that may occur from the phenomena of disability, this project represents one step toward reshaping the oppressive paradigm of cultural thought regarding disability and the unjust hierarchization of

human ability and worth. What is Discourse Analysis? is an accessible introduction to an empirical research approach which is widely used in the social sciences and related disciplines. This book explores the idea of how meaning is socially constructed and how 'talk' and text can be interpreted. The challenges of discourse analysis are outlined as well as helpful ways to approach them - from finding the right starting point, processing and interpreting data through to building an argument. Discourse analysts work with language data, including talk, documents and broadcast material. Researchers in different traditions study interactions and social practices, meaning-making and larger meaning systems, and contests and conflicts around collective identities, social norms and subjectification. What is Discourse Analysis? addresses new researchers and other academics interested in language and its associated practices. The book outlines the history of discourse analysis, its key concepts and theorists and its uses and challenges. Discussions of published studies illustrate the use of the approach to investigate a range of research topics, such as gender, health and national identities. The book also addresses the practical aspects of discourse analysis, providing clear guidance on data collection and data processing, including transcription and selection. Covering important topics, What is Discourse Analysis? draws from recent articles to show how discourse analysis works in action. Common questions about discourse analysis are presented in a lively and accessible Q&A format. This book will be an essential resource for all researchers working with discourse analysis. The way in which the crowd is constructed has been shown to be the site of power struggles between the status quo and political change. However, there is little qualitative research on how crowd members construct their experiences of participation in crowd activity. This study examines how the crowd in the Tahrir square sit-in during the 2011 Egyptian revolution was constructed by crowd members themselves. Based on semi-structured interviews with five Egyptian demonstrators regarding their experiences of this sit-in, a Foucauldian discourse analysis indicated that crowd members were subject to a set of discourses that served to normalise or problematise the crowd by constructing its processes as either compatible or problematic compared with the values of the neoliberal agenda respectively. Drawing on Foucault's ideas on governmentality, the discursive repertoires available to crowd members were shown to regulate the ways in which they constructed their subjectivity and social action, governing their conduct in line with the neoliberal ideal of the autonomous, responsible individual. It was shown that in constructing crowd self-regulatory practices, crowd members legitimised or resisted techniques of social control internal to the crowd that limited their ability to bring about political change. This major work from renowned scholars in the field,

analyzes the role of language and symbolic media and shows how this enables us to move to new levels of understanding of contemporary organizational issues. An introductory chapter examines the role and growing importance of discourse in the study of organizations. It critically evaluates the contributions of various disciplines and defines organizational discourse as a subject area. The chapters in the first section, Talk and Action, explore the relationship between discourse, action and interaction and their impact on organizational structure and behaviour. Stories and Sensemaking focuses on the analytical potential of the 'story' as a means of illuminating the ways in This book introduces and applies Foucault's key concepts and procedures, specifically for a psychology readership. Drawing on recently published Collège de France lectures, it is useful to those concerned with Foucault's engagement with the 'psy-disciplines' and those interested in the practical application of Foucault's critical research methods. 'This is one of those books that, researchers, students and teachers want to have on their desks, because it answers questions, clarifies confusing areas, and provides accessible overviews of sometimes technical work - and all in prose that is unpretentious and engaging' - British Journal of Sociology 'There is no doubt that conversation analysis (CA) is an impressive and valuable approach to studying discourse, and Wooffitt does an excellent job of demonstrating its analytical sophistication and rigour' - European Journal of Communication 'This is an excellent book: clear, engaging and authoritative. It treads a path through the many confusions and provides a map of the fields of conversation analysis, discourse analysis, critical discourse analysis and discursive psychology which is better than any currently available. It will be a valuable resource in teaching' - Professor Jonathan Potter, Loughborough University 'An excellent exposition: concepts are explained and put into context, and the reader is guided from introductory to advanced levels of discussion. Wooffitt sets out and answers the kinds of questions typically raised by students and others about relations and differences between discourse and conversation analysis... engaging and useful' - Professor Derek Edwards, Loughborough University This significant text by Robin Wooffitt is the first to systematically examine the complex relationship between conversation analysis and discourse analysis. It comes at a timely moment: despite the close connection between the two forms of analyses in academic research, no other existing text explains these links methodically, comprehensively and for the benefit of undergraduate and master's students. Key features of this text: - It takes students from first principles up to more advanced debates, and is therefore suitable for under grad and MA/PhD students. - Careful illustration of methodological approaches through detailed analysis of data. - Clarity of writing; lengthy chapter summaries; further readings;

glossary of CA/DA terminology as an appendix. Conversation Analysis and Discourse Analysis shows how the methods and findings of conversation and discourse analysis may inform the development of empirical research questions. It will therefore be an invaluable resource for social science students on courses which require them to undertake practical or empirical exercises. One of our bestselling handbooks, *The SAGE Handbook of Qualitative Research in Psychology* is back for a second edition, with updated chapters and three new chapters introduced on Thematic Analysis, Interpretation and Netnography. Who are we today? That deceptively simple question continued to be asked by the French historian and philosopher, Michel Foucault, who for the last three decades has had a profound influence on English-speaking scholars in the humanities and social sciences.; This text is designed for undergraduates and others who feel in need of some assistance when coming to grips with Foucault's voluminous and complex writings. Instead of dealing with them chronologically, however, this book concentrates on some of their central concepts, primarily Foucault's rethinking of the categories of "discourse", "power", and "the subject".; Foucault's writings contribute collectively to what he himself calls "an ontology of the present". His historical research was always geared towards showing how things could have been and still could be otherwise. This is especially the case with respect to the production of human subjects. Now in its third edition, this successful book introduces students to the area of social science theory and research known as social constructionism. Using a variety of examples from everyday experience and from existing research in areas such as personality, sexuality and health, it clearly explains the basic theoretical assumptions of social constructionism. Key debates, such as the nature and status of knowledge, truth, reality and the self are given in-depth analysis in an accessible style. Drawing on a range of empirical studies, the book clearly defines the various different approaches to social constructionist research and explores the theoretical and practical issues involved. While the text is broadly sympathetic to social constructionism, it also adopts a critical perspective to the material, addressing its weaknesses and, in the final chapter, subjecting the theory itself to a more extensive critique. New to this edition: Extended coverage of the relationship between 'mainstream' psychology and social constructionism and how the two fields can engage with each other. An exploration of the rise and popularity of neuroscience and the challenge it poses to social constructionism. New material on the field of psychosocial studies. Updated coverage of existing key issues such as age and sexuality, and inclusion of more recently emerging issues (e.g. status and role of affect). Updated discussion of key social constructionist contributors, with revised references. Updated chapter on research

methods, including more on narrative and critical narrative analysis, and personal construct methods. The third edition of Social Constructionism extends and updates the material covered in previous editions and will be an invaluable and informative resource for undergraduate and postgraduate students across the social and behavioural sciences.
