This is a clinical neurology book for students and non neurologists, and for those who teach them. The book covers neuroanatomy, history taking and examination and then proceeds to discuss the clinical features of common problems as well as selected, less common neurological disorders, in a way that will demystify a part of medicine that many find complex and difficult to understand. The book is accompanied by a DVD explaining concepts, demonstrating techniques of performing the neurological examination and demonstration of abnormal neurological signs. The first chapter is devoted to neuroanatomy from a clinical viewpoint. The concept of localising problems by likening the nervous system to a map grid with vertical meridians of longitude (the ascending sensory pathways and the descending motor pathway) and horizontal parallels of latitude (cortical signs, brainstem cranial nerves, nerve roots and peripheral nerves) of the nervous system is developed. Subsequent chapters take the reader through the neurological examination and the common neurological presentations from a symptom oriented approach. Chapter 4 contains a very simple method of understanding the brainstem, the "rule of 4". Chapter 6 discusses the approach after the history and examination are completed. The final chapter is an overview of how to approach information gathering and keeping up-to-date using the complex information streams available. widely illustrated with case studies and illustrations key points clinical questions clinical orientation with comprehensive references CCM Certification Made Easy is the only book written by a case manager specifically to prepare case managers for taking the CCM Exam administered by the Commission for Case Management Certification. The central nervous system comprises the brain and spinal cord. Neurology is a branch of medicine dealing with disorders of the nervous system. It deals with the diagnosis and treatment of all categories of conditions and diseases involving the central and peripheral nervous system. The evaluation of a patient with neurological disorder involves history taking and the neurological examination: clinical evaluation. The information obtained from the clinical evaluation is important to determine where the problem exists in the nervous system: the key process in developing the differential diagnosis. The second part continues with the neurological examination dedicating a chapter to each aspect of the nervous system for clearer and easier assimilation. Certain examinations which are no longer popular are also described as they still give important information regarding the diagnosis. The challenge of evaluating the unconscious patient necessitates the dedication of a chapter to the unconscious patient in this book. In addition, there has been an overreliance in investigations in recent times to make a diagnosis irrespective of the fact that a great percentage of diagnosis in neurology can be made by good clinical acumen. Clinical Neurology Made Easy is therefore a reminder of the importance of a detailed methodical clinical evaluation. It also gives assurance to doctors and neurologists in poor resource settings that the diagnosis of neurological disorders is not impossible but rather, it is within reach with good clinical evaluation. Neurological clinical examinations are some of the most intimidating procedures medical students, junior doctors and residents have to perform. Paediatrics is much more than medicine miniaturised.' From reviews of the previous edition: 'All in all a very handy book for the student, the resident or other professionals working with children. I had a lot of fun reading it.' 'The book is full of wonderful illustrations, and funny and profound advice with quotations, like the words of Sir Dominic Corrigan (1853): "The trouble with many doctors is not that they do not know enough but that they do not see enough", or the advice to teach thy tongue to say "I do not know" (Rabbi Moses Maimonides or Rambam, 1135-1204). I have used this book for my final medical year paediatrics exams, the DCH and the MRCP and it has been a great help.
