This practical volume covers the current pedagogic principles of stroke disease and care, including the acute hospital phase, public health issues, prevention, long-term management, and silent vascular disease. This complete guide helps caregivers, family

members, and stroke survivors understand the day-to-day issues faced by care providers. It guides readers through every stage of care, from explaining different kinds of strokes to understanding personality changes brought on by the illness. Other topics covered include how to prevent strokes from recurring, making the home safe and comfortable, returning to work after a stroke, and preventing caregiver burnout. Cardiovascular, respiratory, and related conditions cause more than 40 percent of all deaths globally, and their substantial burden is rising, particularly in low- and middle-income countries (LMICs). Their burden extends well beyond health effects to include significant economic and societal consequences. Most of these conditions are related, share risk factors, and have common control measures at the clinical, population, and policy levels. Lives can be extended and improved when these diseases are prevented, detected, and managed. This volume summarizes current knowledge and presents evidence-based interventions that are effective, cost-effective, and scalable in LMICs. This explains the various team members needed for the rehabilitation of stroke patients - nurse, physiotherapist, occupational therapist, speech therapist. At the age of 43, Jennifer Gordon suffered a debilitating stroke that robbed her of the power of speech. What was it like for an intelligent, articulate, imaginative woman to find herself in a world where she could no longer communicate? Speechless tells this

story. It describes the often puzzling symptoms leading to the stroke; the shock, then denial, then acceptance of the stroke itself; the periods of hospitalisation and rehabilitation and the long journey back to a 'normal' life. The author experiences despair at being dependent on others; resentment at being judged because she is different; frustration at the need for intense concentration to do even simple things; grief as she becomes aware of a loss of personality; and joy at each small step towards regaining what she has lost. Speechless is written with dignity, honesty and humour in a way that evokes empathy but never pity. Anyone who has ever been a patient will feel they can relate in some small way to Jennifer Gordon's feelings of helplessness, anger, fear and gratitude as doctors, nurses, orderlies, therapists and hospital workers cross her path. Because of this, the book is enlightening reading for all health care professionals as well as relatives and friends and the patients themselves. "Transformative...[Taylor's] experience...will shatter [your] own perception of the world."—ABC News The astonishing New York Times bestseller that chronicles how a brain scientist's own stroke led to enlightenment On December 10, 1996, Jill Bolte Taylor, a thirty-seven-year-old Harvard-trained brain scientist experienced a massive stroke in the left hemisphere of her brain. As she observed her mind deteriorate to the point that she could not walk, talk, read, write, or recall any of her life—all within four hours—Taylor alternated between

the euphoria of the intuitive and kinesthetic right brain, in which she felt a sense of complete well-being and peace, and the logical, sequential left brain, which recognized she was having a stroke and enabled her to seek help before she was completely lost. It would take her eight years to fully recover. For Taylor, her stroke was a blessing and a revelation. It taught her that by "stepping to the right" of our left brains, we can uncover feelings of well-being that are often sidelined by "brain chatter."

Reaching wide audiences through her talk at the Technology, Entertainment, Design (TED) conference and her appearance on Oprah's online Soul Series, Taylor provides a valuable recovery guide for those touched by brain injury and an inspiring testimony that inner peace is accessible to anyone. Risk Factors for Cerebrovascular Disease and Stroke address the relationship of a wide variety of vascular risk factors in the spectrum of cerebrovascular diseases. An international group of professionals at the forefront of research and education, provide their expertise about environmental and genetic determinants for cerebrovascular disease and stroke. The authors aim to provide information on developments of genetic, environmental and lifestyle-related risk factors of various subtypes of stroke, and MRI-markers of cerebrovascular disease. One in two men, and one in three women after the age of 40, will develop a stroke in their lifetime. The burden of cerebrovascular disease extends far beyond that of acute clinical

events such as stroke, with "covert" vascular injury on brain MRI being highly prevalent in older community-dwelling persons. Therefore, improving our understanding of the risk factors for stroke and cerebrovascular disease is of paramount importance for improving prevention strategies. Secular trends in stroke epidemiology, risk factors, and intermediate markers (including carotid ultrasound, brain MRI and circulating biomarkers) are presented. Cutting edge information on genetic, environmental and lifestyle-related risk factors of various subtypes of stroke and MRI-markers of cerebrovascular diseases are displayed. "It comes as a great shock when the active and very articulate man you have shared your life with for sixty odd years has a stroke and loses all his speech." Mick Sutton knew his wife, but could not speak her name. He could not write his own, could hardly make sense of the hospital menu, let alone read his paper or a book. His frustration was palpable. Then he met Fiona, his Speech Therapist, whose guidance worked wonders. Gradually she built up Mick's speech and his ability to write grammatically. "I think if I had to describe Mick's approach to rehabilitation it was that he saw it as a new job," Fiona explains. "He was very disciplined and motivated, and I have no doubt that his letters and postcards sent to me during a world cruise, reproduced in this volume with very few language or stylistic corrections, will indicate his progress." The letters and postcards written by Mick while on a world cruise is a saga of recovery and an inspiration for others who have to overcome the challenges of a stroke or similar unexpected changes or hurdles in their lives. Dr. Mike Dow is a best-selling author, psychotherapist, and relationship expert. So why is he writing a book about stroke? Well, what you probably don't know about Dr. Mike is that his younger brother, David, is a stroke survivor. What's more, David's stroke happened

when he only 10 years old. This means most of Dr. Mike's teenage years were spent witnessing what his family was dealing with trying to find the best treatments for David. He struggled to know what to do to help his brother. He watched helplessly as his brother wrestled with depression, trying to find the motivation to recover on top of the challenges of adolescence. He mourned the loss of what could have been—and he was angry. How his family would have loved to sit down with top experts in stroke to find out what they should be doing and have their questions answered. Now Dr. Mike has the ability to do just that, and he's doing it so that others in his family's position don't have the same struggle. Armed with questions from stroke survivors and their loved ones, Dr. Mike talks with the best clinicians across the country to get over 100 answers you need to know to maximize your recovery. An essential companion for busy professionals seeking to navigate stroke-related clinical situations successfully and make quick informed treatment decisions. Up-to-date discussion of the etiology, diagnosis, treatment, and prevention of this common cause of stroke and cognitive impairment. This is a revised edition of the guide to home care of patients who have suffered from stroke. The book is designed for both health care practitioners and carers. Accessible handbook covering the investigation, diagnosis and management of transient ischemic attacks and minor strokes. Stroke is the most common cause of adult mortality in

the United States. Antithrombotic agents form the mainstay of stroke prevention. Aspirin produces a modest reduction in the risk of second stroke and transient ischemic attack (TIA, mini-stroke) and is widely recommended for initial therapy. The thienopyridines (Ticlid) and clopidogrel (Plavix) are alternatives for secondary prevention in patients who do not respond to or cannot take aspirin. They are no more effective than aspirin and have been associated with thrombotic thrombocytopenic purpura. The combination of aspirin and extended-release dipyridamole (Aggrenox) has several mechanisms of action and an additive effect on reducing stroke risk compared with either agent alone. A 2-fold increase in risk reduction and favorable safety profile suggest that the combination can serve as first-line prophylaxis against a second stroke. This volume, as part of the Oxford American Pocket Note series, provides the clinician with up-to-date information on the guidelines, and therapeutic options in recurrent stroke/TIA prevention. Useful features include treatment algorithms, illustrations, medication tables, charts and figures to enable both the specialist and the primary provider to ensure the best options to their patients in order to prevent the recurrence of stroke/TIA. Print version of the book includes free access to the app (web, iOS, and Android), which offers interactive Q&A review plus the entire text of the print book! Please note the app is included with print purchase only. Promotes optimal test
