Making Decisions That Matter Jun 11 2021 Researchers studying decision making have traditionally studied the phenomenon in the laboratory, with hypothetical decisions that may or may not involve the decision maker's values, passions, or areas of expertise. The assumption is that the findings of these well-controlled laboratory studies will shed light on the important decisions people make in their everyday lives. This book examines that assumption. The volume begins by covering four basic phases of decision making: setting or clarifying goals, gathering information, structuring the decision, and making a final choice. Comprehensive reviews of existing literature on each of these topics is provided. Next, the author examines differences in decision making as a function of several factors not typically discussed in the literature: the type of decision being made (e.g., legal, medical, moral) and the existence of individual differences in the decision maker (developmental differences, individual differences in style or temperament, differences as a function of expertise). The author then examines the topic of group decision making, contrasting it with individual decision making. The volume concludes with some observations and suggestions for improving peoples' everyday decision making. This book is intended for use as a core textbook or supplement for courses in psychology, education, or allied disciplines. It will also be an invaluable resource for people who work with people making decisions in various applied settings, such as schools, universities, and health care centers.

Social Psychology Feb 17 2022 Combining the efforts of sociologists and psychologists, this work, originally published in 1952 and revised in 1966, embraces these two disciplines to show how social-psychological problems must be viewed in individual as well as general terms. Human interaction is, therefore, the main theme of this authoritative and rewarding volume, which offers a more comprehensive viewpoint than texts written from with a strictly psychological or a strictly sociological approach. Whenever it can be shown that interaction intervenes between individual and group variables, the authors carefully note the manner in which this occurs. Well written yet succinct, the chapters are closely integrated to present continuously developing concepts of the time. Research illustrations are set off typographically but skilfully woven into the related text. Three appendixes, one on the measurement of individual attitudes, a second on survey research, and a third on Bale's interaction process analysis, may be consulted without interrupting the flow of the other chapters.

Self-Regulated Learning and Academic Achievement Mar 28 2020 This volume brings together internationally known researchers representing different theoretical perspectives on students' self-regulation of learning. Diverse theories on how students become self-regulated learners are compared in terms of their conceptual origins, scientific form, research productivity, and pedagogical effectiveness. This is the only comprehensive comparison of diverse classical theories of self-regulated learning in print. The first edition of this text, published in 1989, presented descriptions of such differing perspectives as operant, phenomenological, social learning, volitional, Vygotskian, and constructivist theories. In this new edition, the same prominent editors and authors reassess these classic models in light of a decade of very productive research. In addition, an information processing perspective is included, reflecting its growing prominence. Self-regulation models have proven especially appealing to teachers, coaches, and tutors looking for specific recommendations regarding how students activate, alter, and sustain their learning practices. Techniques for enhancing these processes have been studied with considerable success in tutoring sessions, computer learning programs, coaching sessions, and self-directed practice sessions. The results of these applications are discussed in this new edition. The introductory chapter presents a historical overview of research and a theoretical framework for comparing and contrasting the theories described in the following chapters, all of which follow a common organizational format. This parallel format enables the book to function like an authored textbook rather than a typical edited volume. The final chapter offers an historical assessment of changes in theory and trends for future research. This volume is especially relevant for students and professionals in educational psychology, school psychology, guidance and counseling, developmental psychology, child and family development, as well as for students in general teacher education.
