2020 The book provides an overview of some of
the recent techniques that have been applied to
an understanding of the structure of regional
and interregional exchange within national
economies. The issues range from an evaluation
of NAFTA, comparisons of regional economies,
structural change over time and issues related to
measurement and interpretation. Many of the
contributions address the problems using

network structures.

Regional Economic Development and History

Oct 15 2021 Regional Studies is inextricably

intertwined with history. Cultural and

institutional legacies inform choices between

different policy options, meaning that the past

plays a crucial role in how we think about regional economic development, planning and policy. Through a selection of accessible theoretical, methodological and empirical chapters, this book explores the connections between regional development and history. Drawing on the expertise of scholars in several disciplines, it links history to topics such as behavioural geography, interdependence, divergence and regional and urban policy. This innovative book will be of interest to researchers across regional studies, planning, economic geography and economic history.

Routledge Library Editions: Urban and Regional

Economics Feb 16 2022 Reissuing works

originally published between 1952 and 1991,

this collection presents a wide-ranging set of

excellent texts across economics, geography,

urban studies, planning, politics and industrial

studies. Addressing problems and policy,

development and demographics, these books

together form a wealth of research and debate.

Some volumes address specific areas such as industrialization, housing, property, city-systems, de-centralization, employment or rural resources. Other volumes present case studies in Australia, Britain, underdeveloped countries, South Africa and the USA while some are fully international in representation. Given the recent economic shifts around the world, this timely collection is an incredibly useful resource.

The Economic Development of Europe's Regions Aug 01 2020 This book is the first quantitative description of Europe's economic development at a regional level over the entire twentieth century. Based on a new and comprehensive set of data, it brings together a group of leading economic historians in order to describe and analyze the development of European regions, both for nation states and for Europe as a whole. This provides a new transnational perspective on Europe's quantitative development, offering for the first time a systematic long-run analysis of national

policies independent from the use of national statistical units. The new transnational dimension of data allows for the analysis of national policies in a more thorough way than ever before. The book provides a comprehensive database at the level of modern NUTS 2 regions for the period 1900–2010 in 10-year intervals, and a panoramic view of economic development both below and above the national level. It will be of great interest to economic historians, economic geographers, development economists and those with an interest in economic growth.

Knowledge-Based Services, Internationalization and Regional Development May 10 2021 The acquisition and management of information is central to the operation and marketing of many service-providing firms and other organizations. Their varied knowledge requirements influence approaches to organizational structure, relationships to other organizations, the location

of operations, and entry into new markets. In this book, an international and interdisciplinary team of leading scholars examines the attributes of knowledge acquisition and diffusion within and across service-providing organizations. Using a variety of case examples, they pay particular attention to the processes of internationalization and the ways in which service-providing organizations affect regional economic development.

An Introduction to Regional Economics Dec 29 2022

Introduction to Regional Economic

Development Nov 03 2020 This is a relatively simple and easy to read introduction of major regional and local economic development theories, their theoretical evolution and other relevant topics such as governance, institutions and local leadership within the globalization context. It also discusses some basic analytical tools and provides a template for them in an easy to use MS Excel spreadsheet application. It

introduces conflict management procedures into regional development process and provides a regional decision support framework.

Regional Economic Development Apr 20 2022

Regional economic development has attracted the interest of economists, geographers, planners and regional scientists for a long time. And, of course, it is a field that has developed a large practitioner cohort in government and business agencies from the national down to the state and local levels. In planning for cities and regions, both large and small, economic development issues now tend to be integrated into strategic planning processes. For at least the last 50 years, scholars from various disciplines have theorised about the nature of regional economic development, developing a range of models seeking to explain the process of regional economic development, and why it is that regions vary so much in their economic structure and performance and how these aspects of a region can change dramatically over

time. Regional scientists in particular have developed a comprehensive tool-kit of methodologies to measure and monitor regional economic characteristics such as industry sectors, employment, income, value of production, investment, and the like, using both quantitative and qualitative methods of analysis, and focusing on both static and dynamic analysis. The 'father of regional science', Walter Isard, was the first to put together a comprehensive volume on techniques of regional analysis (Isard 1960), and since then a huge literature has emerged, including the many titles in the series published by Springer in which this book is published.

Regional Economic Cooperation Among SAARC Countries Jan 06 2021

Regional Economics: Fundamental Concepts, Policies, And Institutions Nov 27 2022 Regional Economics: Fundamental Concepts, Policies, and Institutions is a unique and unconventional economics textbook which emphasizes the role

of 'space' in economics and highlights the importance of non-economic factors particularly the role of institutions in regional development. It also presents the approach on how to evaluate regional development performance based on economic, social, and environmental considerations, which is the organizing principle for meeting people-oriented development and sustainable development goals. Other essential concepts such as 'regional science' and 'spatial economics' are also explored in this book. Why activities tend to be spatially concentrated and can get more intensified despite efforts to disperse them toward other regions? Why infrastructure development intended to increase activities and improve the population's welfare can produce the opposite outcome of greater interregional inequality? What is the role of regional and national policies in affecting growth incentives, and how non-economic factors such as institutions and the quality of local leaders can make a difference in welfare achievement?

Addressing these questions allows readers to better understand the various phenomena in the actual development process.

Modeling in Urban and Regional Economics Aug 25 2022 This title provides a comprehensive, critical coverage of the progress and development of mathematical modelling within urban and regional economics over four decades.

The Regional Economics of Knowledge and Talent Oct 27 2022 'The Regional Economics of Knowledge and Talent, edited by Charlie Karlsson, Börje Johansson and Roger R. Stough brings together a wide range of cutting-edge studies and research on the role of talent in regional development. It is an important addition to our understanding of how knowledge, human capital, and talent shape the development of cities and regions across the globe.' - Richard Florida, University of Toronto, Canada

Regional Economic Impact Analysis and Project Evaluation Dec 17 2021 This book

provides a non-technical introduction to the fundamental principles and techniques of regional impact and evaluation analysis. The book is written for readers who have a minimal background in mathematics and economics and so the materials listed in the bibliographies have been chosen for their accessibility to such readers. References to relevant papers of a more technical nature are indicated in notes in each reference. Unlike existing texts, which usually concentrate on regional impact or evaluation analysis, *Regional Economic Impact Analysis and Project Evaluation* offers an extensive introduction to both these subjects, since both are critical to the study and practice of regional economic analysis. Two case studies, intended as illustrations of practical applications, are included in each of the six chapters that deal with specific principles or techniques. While many of the case studies and much of the literature cited in the bibliographies is Canadian, a substantial portion is from the United States

and Great Britain, demonstrating that the principles and techniques discussed in this book are universally applicable.

The Regional Economics of Technological Transformations

Nov 15 2021 The Regional Economics of Technological Transformations provides a comprehensive overview of 4.0 technological transformations in Europe and their socio-economic impact, with a particular emphasis on the regional dimension of the phenomena. The authors employ extensive original data and robust quantitative methods to analyse technological change in all regions of the 27 EU countries plus the UK and shed light on this trend for Europe and beyond. Structured in four parts, the book first looks at conceptual definitions, empirical measurements and expected impacts on both the economic performance (GDP and productivity growth) and the labour market, and then moves on to analyse where 4.0 technological transformation actually takes place in Europe and the reasons for this.

Next, it offers original empirical evidence on the impacts of the different transformations, and of their intertwined effects, on both the economy and the society. Finally, the book explores the policy implications of this technological transformation. This book will be valuable reading for advanced students, researchers and policymakers working across regional economics, industrial economics and innovation policy. It will be of primary interest to regional scientists interested in the field, who may enjoy the conceptual and empirical solutions to the study of a very complex, timely and still largely unexplored theme. Sociologists, engineers and political economists can benefit from the book's analysis, noting the urgency of the development of new ethical rules governing the new digital and labour markets. Finally, the book may appeal to policymakers interested in opportunities to increase regional competitiveness and sustainability goals through the advent of 4.0 technologies.

The Economics of Small Businesses Apr 28 2020

Is small still beautiful? The recent economic and financial crisis has shown that developed countries in which firms are smaller suffered the biggest GDP plunges. Today, economic growth depends more than in the past on sound and well-organized firms, which means more innovation, a better educated labor force, higher likelihood of access to financial resources and efficient investments. This does not mean the end of small-sized firms, but that they need to be different from the way they were in the past. This book provides an international perspective on analyses and policy recommendations for how small businesses can reinforce their role in modern economies.

Regional Economics And Regional Planning

Sep 25 2022 This is the first comprehensive book written on the Theory of Regional Economics in India. Most other books discuss the 'theory', policies' and planning, and present the case studies or analyze the regional

disparities all at one place resulting in the sketchy analysis of all. Development of the sectors should also have a regional dimension and should also provide benefits to the depressed economic/ethnic groups.

Applied Analysis of Growth, Trade, and Public Policy Jun 30 2020 This book analyzes the various problems of growth, trade and public policy from the perspective of applied economics, based on research in areas such as public policies, trade and regulation, and development economics. Part 1 investigates the broad problems of growth and regional economy, focusing on economic developments in Japan and Korea. Part 2 discusses trade and foreign investment in Japan, mainly on an empirical basis. Part 3 then examines various public economic policies using applied analysis tools. The papers in this volume have been collected to commemorate ten years of academic exchange between the Japan Association for

Applied Economics (JAAE) and the Korean Economics and Business Association (KEBA), and include an applied economic analysis of growth and trade in Korea and Japan.

New Urban Strategies in Advanced Regional Economies Jan 18 2022

Regional Economic History of Thailand Dec 25 2019 This book presents an economic history of Bangkok, the Central Region, the North, the South, and Northeastern Regions from the signing of the Bowring Treaty in 1855 to the present. Most research has focused on Bangkok as the centre of change affecting other regions and has neglected other regions that had an influence on Bangkok. This book however looks at the changes not only in Bangkok, but also in the other regions, and emphasizes the ways in which Bangkok had an impact on the other regions, and how changes in the other regions affected Bangkok. It also looks, in turn, at each of the principal regions, and concentrate on the long-term economic and social changes and the

various forces which promoted the changes.

Handbook on Regional Economic Resilience

Jan 24 2020 This Handbook provides a collection of high quality contributions on the state of the art in current debates around the concept of regional economic resilience. It provides critical contributions from leading authors in the field, and captures both key theoretical debates around the meaning of resilience, its conceptual framing and utility, as well as empirical interrogation of its key determinants in different international contexts.

Big Data for Regional Science Mar 20 2022

Recent technological advancements and other related factors and trends are contributing to the production of an astoundingly large and rapidly accelerating collection of data, or 'Big Data'. This data now allows us to examine urban and regional phenomena in ways that were previously not possible. Despite the tremendous potential of big data for regional science, its use and application in this context is fraught with

issues and challenges. This book brings together leading contributors to present an interdisciplinary, agenda-setting and action-oriented platform for research and practice in the urban and regional community. This book provides a comprehensive, multidisciplinary and cutting-edge perspective on big data for regional science. Chapters contain a collection of research notes contributed by experts from all over the world with a wide array of disciplinary backgrounds. The content is organized along four themes: sources of big data; integration, processing and management of big data; analytics for big data; and, higher level policy and programmatic considerations. As well as concisely and comprehensively synthesising work done to date, the book also considers future challenges and prospects for the use of big data in regional science. Big Data for Regional Science provides a seminal contribution to the field of regional science and will appeal to a broad audience, including those

at all levels of academia, industry, and government.

Transitions in Regional Economic

Development Mar 08 2021 At a time of extraordinary challenges confronting the world, this book analyses some of the profound changes occurring in the development of cities and regions. It discusses the uncertainties associated with the stalling of hyper-globalization and asks whether this creates opportunities for resurgent regional economies driven by local capabilities, resource efficiencies and domestic production. Theory and evidence on socio-economic and environmental transitions underway in many regions are brought together. Implications of the shifting balance of global power towards emerging economies in the East are explored, along with the consequences of urbanization in the global South for politics and democracy. Dilemmas surrounding migration are also discussed, including whether incomers displace

local workers and depress wages, or bring benefits in the form of know-how, new technology and investment. More integrative concepts of the region and theories of regional development are analysed, recognising the role of human capital, knowledge, innovation, finance, infrastructure and institutions. This was originally published as a special issue of *Regional Studies*.

Handbook of Regional and Urban Economics

Dec 05 2020 The new Handbook of Regional and Urban Economics: Cities and Geography reviews, synthesizes and extends the key developments in urban and regional economics and their strong connection to other recent developments in modern economics. Of particular interest is the development of the new economic geography and its incorporation along with innovations in industrial organization, endogenous growth, network theory and applied econometrics into urban and regional economics. The chapters cover theoretical

developments concerning the forces of agglomeration, the nature of neighborhoods and human capital externalities, the foundations of systems of cities, the development of local political institutions, regional agglomerations and regional growth. Such massive progress in understanding the theory behind urban and regional phenomenon is consistent with on-going progress in the field since the late 1960's. What is unprecedented are the developments on the empirical side: the development of a wide body of knowledge concerning the nature of urban externalities, city size distributions, urban sprawl, urban and regional trade, and regional convergence, as well as a body of knowledge on specific regions of the world-Europe, Asia and North America, both current and historical. The Handbook is a key reference piece for anyone wishing to understand the developments in the field.

Geography, Institutions and Regional

Economic Performance Jun 22 2022 The book

aims to present “traditional features” of regional science (as geographical concepts and institutions), as well as relatively new topics such as innovation and agglomeration economies. In particular it demonstrates that, contrary to what has been argued by recent economics literature, both geography and institutions (or culture) are relevant for local development. In fact, these phenomena, along with the movement of goods and workers, are among the main reasons for persisting development differentials. These intriguing relationships are at the heart of the analysis presented in this book and form the conceptual basis for a promising institutional approach to economic geography.

The Spatial Economy Feb 04 2021 The authors show how a common approach that emphasizes the three-way interaction among increasing returns, transportation costs, and the movement of productive factors can be applied to a wide range of issues in urban, regional, and

international economics. Since 1990 there has been a renaissance of theoretical and empirical work on the spatial aspects of the economy—that is, where economic activity occurs and why. Using new tools—in particular, modeling techniques developed to analyze industrial organization, international trade, and economic growth—this “new economic geography” has emerged as one of the most exciting areas of contemporary economics. The authors show how seemingly disparate models reflect a few basic themes, and in so doing they develop a common “grammar” for discussing a variety of issues. They show how a common approach that emphasizes the three-way interaction among increasing returns, transportation costs, and the movement of productive factors can be applied to a wide range of issues in urban, regional, and international economics. This book is the first to provide a sound and unified explanation of the existence of large economic agglomerations at various spatial scales.

Regional Perspectives on Policy Evaluation

Mar 27 2020 The evaluation of public policies is of paramount importance for modern policy making, especially in a period of severe budget constraints. The literature has proposed several methods to deal with the issue of causality and counterfactual evaluation in a variety of contexts, with an increasing attention to the local dimension. The book aims to present the state-of-the-art of evaluation techniques with a special focus on the consideration of geographical and spatial effects into existing methodologies (such as propensity score matching, regression discontinuity, difference-in-difference). Furthermore, the volume highlights how strict the identification conditions for models with spatial effects are and proposes instrumental variables as a technique able to circumvent the issue. Finally, some insights into the emerging literature on ex ante evaluation are offered with respect to EU Cohesion Policy.

Empirical Regional Economics Jan 30 2023 This textbook offers an introduction to empirical regional economics, including a comprehensive and systematic overview of the fundamentals, history, development, and applications of economic base models. It not only provides a sound basis for regional economics and regional economic analysis, but it also includes numerous applications of the underlying theory. The book has an empirical orientation, highlighting the value of observation and testing in order to explain regional economic behavior. Theory plays an important role in this study, but it is only a starting point. The book is divided into three parts: the first discusses the economic base theory of regional growth and the empirical evidence supporting it, while the second part covers the specification and application of four increasingly complex regional economic models: the economic base model, the input-output model, the interindustry econometric model, and the structural time-series model. Lastly, the

third part presents forty-eight regional economic case studies organized under seven headings, including economic cycles, economic policy, and regional forecasting. Given its scope, the book appeals to upper-undergraduate and graduate students majoring in economics, economic geography, and business, as well as to anyone in the private or public sector interested in gaining a better understanding of practical methods of regional economic forecasting and analysis.

Regional and Urban Economics and Economic Development Sep 13 2021

Thorough and authoritative, *Regional and Urban Economics and Economic Development: Theory and Methods* provides students with a sound approach to analyzing the economic progress of a region or urban area. The textbook is divided into four sections for ease of reference. The first section, *Market Areas and Firm Location Analysis* introduces spatial economics and location theory, while the next section, *Regional Growth and Development* analyzes regional

growth and development models and policy. Introducing the foundations of urban economics, *Urban Land Use and Urban Form* examines land rent, land use patterns, and the effects of attempts to control land uses. The final section, *Urban Problems and Policy*, investigates local public finance and introduces the policy analysis involved in countering urban problems.

Addressing these topics from the perspectives of how they affect the population at large and how they become established within public policy, *Regional and Urban Economics and Economic Development: Theory and Methods* provides students with an essential foundation not only to understand but also to contemplate the dynamics of varying economic factors as they relate to an area's growth.

Return Migration and Regional Economic Problems Sep 01 2020 This book, originally published in 1986, based on extensive original research, presents many findings on the phenomenon of return migration and on its

impact on regional economic development. It remains the only study of its kind. International in scope, the book includes chapters on return migration in Italy, Portugal, Greece, Ireland, Jordan, Canada, Jamaica, Algeria and the Middle East.

The New Regional Economies May 02 2023

The politics and economics of the United States are wedded in the political economy of the nation state and the nationalist economic policies. This 'nationalist paradigm' is, however, showing the following signs of fatigue: the role of the nation state is diminishing as the economy globalizes; US national accounting systems are less effective, technology forces change; trading blocs are emerging; there is less control of exchange rates; regional economies are restructuring; and competitive environments are changing. This book proposes that political jurisdictions are not economies but polities, and explores the complex and important economic implications of this thesis.

Regional Economic Development Feb 25

2020 First published in 1970, *Regional Economic Development: The Federal Role* examines the economic viability of depressed areas and regions. This book questions whether there is adequate justification, on national economic grounds, for Federal involvement with distressed area revitalisation and looks at the main guidelines for intervention in relation to typology of distressed areas. This title is an ideal resource for students interested in politics, macroeconomics, and federal policies concerning the revitalisation of distressed areas and economies.

Understanding and Interpreting Economic

Structure Apr 08 2021 This book explores new approaches to the measurement and interpretation of the linkages between economic activity flows and income flows in urban and regional economies and new ways to explore the importance of regional economic structure in development. The book combines theoretical

contributions, chapters that focus on the construction and interpretation of new social accounting systems and a variety of empirical applications. These applications encompass community-level income distribution impacts, assessments of income distribution problems in Brazil, interregional impacts of unexpected events in Japan, welfare reform in the US and structural change in Chinese metropolitan economies. One of the special features of the book is the use and application of a wide variety of models - demo-economic, social accounting, interregional computable general equilibrium - employed at a variety of spatial scales.
