Retrieval Medicine Feb 26 2023 Retrieval Medicine is a core, concise and practical text covering the complex clinical and logistical problems experienced in the retrieval environment. Focusing on evidence-based management and clear clinical guidance, this easily portable handbook provides a comprehensive and accessible guide to this growing field for all health professionals involved in the retrieval and transfer of critically ill patients. Covering the practice of acute, emergency and critical care medicine in the transport environment, this handbook provides the practical guidance and clinical knowledge to enable medical practitioners to function independently in highly variable and resource limited environments with acutely unwell, unstable and often clinically undifferentiated patients over long durations. Closely mapped to the Royal College of Surgeons syllabus on retrieval and transfer medicine, this title comprehensively covers all aspects of retrieval medicine, from basic flight physiology to more complex retrievals and common pitfalls. Authored by an authoritative, international team of expert editors and specialist authors, this clinically focused text is complemented by a range of checklists and reference tools for practical and accessible use in the field. These deliver core information for use in the primary retrieval setting, allowing the retriever to structure their approach to a crisis and correct the problem with suggested interventions. Topics include retrieval systems and coordination, crisis resource management, shock, and a range of chapters focusing on responding to specific areas of medicine when encountered in the retrieval environment, such as cardiology and obstetrics and gynaecology.

Language Use and Language Learning in CLIL Classrooms Jan 01 2021 This volume explores a highly topical issue in second and foreign language education: the spreading practice in mainstream education to teach content subjects through a foreign language. CLIL has been enthusiastically embraced as a language enrichment measure in many contexts and finally research can offer principled insights into its dynamics and potentials. The editors' introductory and concluding chapters offer a synthesis of current CLIL research as well as a critical discussion of unresolved issues relating both to theoretical concerns and research practice. The individual contributions by authors from a range of European contexts report on current empirical research in this dynamic field. The focus of these chapters ranges from theoretical to empirical, from learning outcomes to classroom talk, examining both the written and spoken mode across secondary and tertiary educational contexts. This volume is a valuable resource not only for researchers and teachers but also for policy makers.

Perception in Multimodal Dialogue Systems Nov 11 2021 The IEEE Tutorial and Research Workshop on Perception and Interactive Technologies for Multimodal Dialogue Systems (PIT 2008) is the continuation of a successful series of workshops that started with an ISCA Tutorial and Research Workshop on Multimodal Dialogue Systems in 1999. This workshop was followed by a second one focusing on mobile dialogue systems (IDS 2002), a third one exploring the role of affect in dialogue (ADS 2004), and a fourth one focusing on perceptive interfaces (PIT 2006). Like its predecessors, PIT 2008 took place at Kloster Irsee in Bavaria. Due to the increasing interest in perceptive interfaces, we decided to hold a follow-up workshop on the themes discussed at PIT 2006, but encouraged above all papers with a focus on perception in multimodal dialogue systems. PIT 2008 received 37 papers covering the following topics (1) multimodal and spoken dialogue systems, (2) classification of dialogue acts and sound, (3) recognition of eye gaze, head poses, mimics and speech as well as combinations of modalities, (4) vocal emotion recognition, (5) human-like and social dialogue systems and (6) evaluation methods for multimodal dialogue systems. Noteworthy was the strong participation from industry at PIT 2008. Indeed, 17 of the accepted 37 papers come from industrial organizations or were written in collaboration with them. We would like to thank all authors for the effort they made with their submissions, and the Program Committee – nearly 50 distinguished researchers from industry and academia – who worked very hard to meet tight deadlines and selected the best contributions for the final program. Special thanks goes to our invited speaker, Anton Batliner from Friedrich-Alexander-Universität Erlangen-Nürnberg.

Laboratory Design, Construction, and Renovation Apr 23 2020 Laboratory facilities are complex, technically sophisticated, and mechanically intensive structures that are expensive to build and to maintain. Hundreds of decisions must be made before and during new construction or renovation that will determine how successfully the facility will function when completed and how successfully it can be maintained once put into service. This book provides guidance on effective approaches for building laboratory facilities in the chemical and biochemical sciences. It contains both basic and laboratory-specific information addressed to the user community—the scientists and administrators who contract with design and construction experts. The book will also be important to the design and construction communities—the architects, laboratory designers, and engineers who will design the facility and the construction personnel who will build it—to help them communicate with the scientific community for whom they build laboratory facilities.
