Integrating Substance Abuse Treatment and Vocational Services - TIP 38            Oct 26 2022  
Unemployment and substance abuse may be intertwined long before an individual seeks treatment. Although the average educational level of individuals with substance abuse disorders is comparable to that of the general U.S. population, people who use substances are far more likely to be unemployed or underemployed than people who do not use substances. According to the U.S. Census Bureau, employment rates for the non- substance-using population ranged from 72.3 percent in 1980 to 76.8 percent in 1991. However, employment rates of the population with substance abuse problems before admission or at admission to treatment have remained at relatively stable, low levels since 1970, ranging from 15 to 30 percent. Most of the research on the employment rates of persons with substance abuse disorders has focused on opiate-dependent persons (usually heroin), and employment rates for other substance users may vary. The data clearly indicate the need for interventions to improve employment rates...

Medication Reconciliation \_\_\_\_\_ May 28 2020 Tired of  
medication reconciliation headaches? Your remedy is

Cancer Caregiving in the United States

Jun 29 2020

Despite advances in detection and treatment, cancer remains a source of pain and distress to patients and of complex challenges to the loved ones caring for them. The trend toward shorter hospital stays in particular has increased the physical, psychological, and financial burden on caregivers, often leading to adverse effects on patients. Cancer Caregiving in the United States illuminates these

complex concerns with authoritative detail. This wide-ranging volume provides a comprehensive survey of cancer-related issues, including those affecting the care triad (patients-family members-professionals) and quality of care as well as the numerous physical, emotional, and financial challenges that caregivers may need to confront. Sources of caregiver difficulty at each stage of the disease, from diagnosis to end of life, are explored. Each chapter analyzes its topic in terms of practice, research, education, and policy, providing a wealth of literature reviews, assessment and care models, interventions, and recommendations for future study and practice. Coverage includes: Caregiving issues for cancer patients with long-term, short-term, and intermittent needs. Family caregivers as members of the treatment team. The impact of health disparities on caregivers. Cancer care policy and advocacy. End-of-life issues for cancer caregivers. Legal, financial, and ethical issues. Cancer Caregiving in the United States is a core reference for researchers, professionals/scientist-practitioners, and graduate students in such caregiving fields as clinical psychology, social work, nursing, public health and medicine, social policy, and educational policy.

Dental Care for Everyone      Dec 24 2019 In the mid-1970s when this book was published, dental care in America below the crisis level was confined almost exclusively to the upper and upper-middle classes. With perhaps the highest standards in the world for dental care, this country has done an unnecessarily poor job of distributing that care widely and efficiently. Why? In this book, Dr.

Dunning examines not only the organization of dental care private practice, clinics, health centers, and the use of auxiliary personnel but also payment systems such as voluntary insurance plans that are widening the market for dental care. He proposes improvements ranging from an increased use of portable dental equipment to large-scale reorganizations of dental practice. This would make dental care, appropriate to need, available to everyone. When he wrote this book, Dr. Dunning was Professor of Ecological Dentistry, Emeritus, and Harvard University.

Design for Critical Care Aug 31 2020 It is now widely recognized that the physical environment has an impact on the physiology, psychology, and sociology of those who experience it. When designing a critical care unit, the demands on the architect or designer working together with the interdisciplinary team of clinicians are highly specialized. Good design can have a hugely positive impact in terms of the recovery of patients and their hospital experience as a whole. Good design can also contribute to productivity and quality of the work experience for the staff. 'Design for Critical Care' presents a thorough and insightful guide to the very best practice in intensive care design, focusing on design that has been successful and beneficial to both hospital staff and hospital patients. By making the connection between research evidence and design practice, Hamilton and Shepley

present an holistic approach that outlines the future for successful design for critical care settings.

Retooling for an Aging America Dec 04 2020 As the first of the nation's 78 million baby boomers begin reaching age 65 in 2011, they will face a health care workforce that is too small and woefully unprepared to meet their specific health needs. Retooling for an Aging America calls for bold initiatives starting immediately to train all health care providers in the basics of geriatric care and to prepare family members and other informal caregivers, who currently receive little or no training in how to tend to their aging loved ones. The book also recommends that Medicare, Medicaid, and other health plans pay higher rates to boost recruitment and retention of geriatric specialists and care aides. Educators and health professional

groups can use Retooling for an Aging America to institute or increase formal education and training in geriatrics. Consumer groups can use the book to advocate for improving the care for older adults. Health care professional and occupational groups can use it to improve the quality of health care jobs.

Quality Impact of Home Care for the Elderly  
2023 A milestone in the evolution of home health care for the elderly Focusing on one of our society's most pressing concerns--home health care for the elderly--this important new book examines the implications for consumers of long term care and reports on the efforts to use survey research to measure the consequences of home care for recipients and informal caregivers. Long-term care is a serious issue in the 1980s as the entire health system is being shaken by rapid changes in financing, technology, and patient and professional expectations; there are more people than ever before who require some home health care for long periods of time beyond that available from conventional medical systems. The far-reaching studies explored in this book provide a substantial intellectual, factual, and conceptual foundation to further the evolution of home care in directions that permit it to match the medical system on more even terms. Conducted by the Community Service Society of New York, this timely research combines field observation with quantitative analyses to answer questions; of special significance is the development of both the concept and the techniques for applying measures of quality of circumstances in health and social provision.
