An exhaustive and generally balanced account of why the US and other industrial powers became dangerously dependent on foreign oil. A college professor who served thirteen years as chief economist of the Senate Subcommittee on Antitrust and Monopoly, Blair chronicles how seven major international petroleum producers--integrated from well to gas pump--began operating in restraint of trade with the usually eager complicity of Mideast rulers around the turn of the century "to avoid the rigors of price rivalry." Even as control of concessions passes to host nations through nationalization or preemptive participation agreements, he maintains, Big Oil retains its hold. Although crude quotas have quadrupled since 1973, OPEC still dances to the majors' tune in fear that oversupply could break prices in the West's volume markets. Having documented both the causes and consequences of monopolistic control of oil resources, Blair suggests several remedies, chiefly utility-style federal regulation of large crude suppliers and vigorous enforcement of antitrust statutes. The book touches on petroleum alternatives as well as supplements (synthetics, electric cars, fuel cells). While Blair's style must be characterized as academic-graceless, he provides damning detail for the upcoming debate on the extent to which oil-industry concentration represents an abuse of economic power overdue for redress. His work is as important and valuable as it is disturbing. The Directory in print includes the mining companies: metal ores mining, coal and peat mining, oil and gas extraction, mining nonmetallic materials. The Directory in print has two indexes which allow any company to be found immediately. *Perspectives of Oil and Gas: The Road to Interdependence* is an up-to-date analysis of the dynamics of petroleum resources. It covers such subjects as oil reserves, depletion policy, pricing strategy, technological factors, and

consumer trends. Likewise, it addresses the constraints faced by oil industry planners, from production to third party sales and refining. In addition to in-depth analysis, this book proposes practical solutions to complex problems: for example, how the different objectives and interests of international oil companies and oil producing countries can be reconciled to their mutual advantage. Attention is also focused on development through cooperation between producers, importers, and multinationals. Perspectives of Oil and Gas ends by addressing the main challenges confronting interdependent economies in the near future. Audience: Decision-makers, policy planners, and academics concerned with the business and technical aspects of the petroleum economy and industry. Investigates alleged misuse of games of chance as a marketing strategy by major oil companies and the impact on retail oil dealers, small business competitors, and consumers. A turn-of-the-century examination of the ruthless business practices of John D. Rockefeller and his associates in the Standard Oil Company This book examines the relationship between foreign companies and government within the Indonesian oil industry. It is concerned in particular to identify those factors which determine the balance between central regulation and untrammelled company activity, in order to evaluate the choices which the government has to make in the creation of its policies. Given the extent of foreign investment in the mineral extractive industries of many of the less-developed countries, such policies are of major importance. From his study of the operation of Indonesian oil contracts, Dr Khong concludes that the formal terms of an agreement may well give a misleading impression of the actual allocation of the benefits from petroleum extraction. The common perception that a basic shift in favour of host governments has occurred is shown to be largely misplaced, whatever relative advances they may have achieved. The Directory in Print includes mining companies: metal ores mining, coal and peat mining, oil and gas extraction, mining nonmetallic materials. Directories in Print have two indexes that allow any company to be found immediately. In response to a congressional request, GAO provided information on the Department of Justice's (DOJ) and the Federal Trade Commission's (FTC) efforts to: (1) expand antitrust and breach-of-contract defenses to protect U.S. oil companies from possible legal suits for participating in the International Energy Agency's (IEA) Emergency Oil Sharing System (ESS); and (2) resolve the problem of foreign blockage of information important to the U.S. government's antitrust review of oil transactions with U.S. oil companies' foreign affiliates. GAO found that: (1) an early DOJ and Department of Energy (DOE) draft plan provided protection for certain type 1 transactions, in which companies rearrange their schedules as they choose to meet a crisis; (2) problems arose in trying to ensure that companies reported to agencies so that they could fulfill their antitrust monitoring responsibilities; (3) IEA approved an alternative plan, which supported changing ESS to permit certain type 2 transactions, in which companies interact with IEA, to occur at any time; (4) the alternative plan would protect companies for type 2 transactions only; and (5) under the alternative plan, companies would have to try to get foreign countries to remove their foreign blocking statutes, which prohibit them from providing information on their foreign affiliates. GAO also found that, although DOE and DOJ approved the plan, it cannot go into effect unless the President finds that an international energy supply emergency exists. This book is a descriptive analysis of current influences in the world oil trade. It is concerned with a central unchanged paradox of the industry SH its preoccupation with maximising the production of high-cost rather than low-cost oil. It follows the rise and decline of OPEC monopoly power in the crude market, and shows how growth in the international oil business has almost ceased since the late seventies, exploring the reasons behind this slow-down. The author has had twenty-five years of practical consultancy in petroleum economics. Ninety percent of the world's oil reserves are entrusted to state-owned companies. Originally created as political instruments, these so-called national oil companies (NOCs) face new demands amid today's dwindling oil reserves and simmering social pressures. Increasingly, state-owned oil firms —particularly in the Middle East —are having to balance the political demands of their governments with the need to be commercially competitive. In this ground-breaking new volume, Valerie Marcel draws on unprecedented access to the politicians, engineers; and businessmen directing five Middle Eastern state oil companies to shed light on one of the most secretive segments of the international oil industry. The author tells the stories of Saudi Aramco, Kuwait Petroleum Corp., the National Iranian Oil Co., Sonatrach of Algeria, and the Abu Dhabi National Oil Co. —oil titans which together produce one quarter of the world's oil and hold half of the world's known oil and gas reserves. Dr. Marcel explains the complex bond between each state and its oil company, tracing the relationship's evolution from the politically charged days of foreign concessions to today's world of profit-driven decisionmaking. Drawn from over 120 interviews with company executives, middle managers, and oil-ministry officials, the author identifies a number of surprising new trends in these companies' strategy, and she paints a picture of their nascent sense of corporate identity. The book provides rare, up-to-date insight into how state-owned companies are striking a balance between their national mission and their commercial needs. The book also provides an insider's guide to these companies' unique culture. Executives and researchers in the region —both inside and outside the oil industry —will find it a valuable tool for understanding business in the Middle East. After looking briefly at the reasons for the oil fraternity's choice of Venezuela, the book examines the relationship between Gómez's government and the oil companies during this period. It deals with the government's initial encouragement, legislation, and unsuccessful attempts to increase production from the small number of companies operating before 1919. The important local links between the oil companies and vested interests, including Gómez's family and entourage, are examined to determine the level of interaction between the two groups. The socio-economic effects of the companies are looked at in detail to ascertain their impact, both regionally and nationally, on agriculture, trade, currency fluctuations, industry and politics. Finally, the government's reaction to this and the degree of control exercised over the exploitation of its natural resources are examined.
