Renewable resources are rapidly gaining importance as alternative raw materials for industrial production. Supply planning with agricultural raw materials poses several challenges to processors. These challenges include seasonal availability, uncertain harvest quality and quantity as well as uncertain commodity market prices. In this work, decision support based on stochastic programming is developed to optimize supply planning of processors of agricultural raw materials given industrial requirements for material use. The approach depicts uncertain parameter values with probability distributions and maximizes the expected profit. Two examples are used to illustrate possible applications: supply planning for a processor of linseed and for a seed company. As stochastic programs can be adapted quickly, this approach can be applied to other supply planning decisions in bio-based supply chains.

"Survey organizations should make this handbook an integral part of their training of telephone interviewers. Johnson, professor of sociology, human development and family studies, and demography and former director of the Survey Research Center, Penn State University and the Bureau of Sociological Research, University of Nebraska-Lincoln

The book focusses on the grammatical feature definiteness in German, visible in the inflection of adjectives (ein schön-es Kind vs. das schön-e Kind). It argues for an analysis of this effect that draws a connection to the visible categories of number and gender on nouns and related words rather than an abstract property. This conclusion rests on the conflation of the established grammatical categories into a single one, number-gender, which explains a vast body of grammatical phenomena in German and principles of language in general. 25 Practice Sets for New Pattern SBI Clerk Preliminary Exam is written exclusively for the New pattern Prelim Exam being conducted by SBI.
