Medical History and Physical Examination in Companion Animals Feb 27 2023 The medical history and physical examination are the most important cornerstones of clinical diagnosis, but there has been no single book devoted to a description of methods applicable to companion animals. This book is intended to fulfil the need. It describes the methods used in the veterinary schools of the University of Utrecht in the

Netherlands and the University of Ghent in Belgium. The effectiveness of these methods is recognized by many visiting staff members and students from other veterinary schools in Europe and North America. Central to this book is the concept that the examination should be as efficient as possible. To achieve this purpose, a short initial examination is used to define the problems presented by the owner. The clinician is then guided in making choices, which focuses the attention on the essential problems and makes more of the examination time available for problem solving. The methods of examination, which are described system by system, are based on this selective approach. Many of the chapters close with a medical history form, which facilitates rapid orientation to the medical problem, and throughout the book photographs and original drawings illustrate both concepts and methods.

Records and Briefs Jan 23 2020 Small Animal Emergency and Critical Care Sep 12 2021 Small Animal Emergency and Critical Care: Case Studies in Client Communication, Morbidity and Mortality provides a unique opportunity to learn from real-life case examples. Presented as a collection of short case studies, the book examines a wide

range of situations likely to arise in emergency practice. The approach is modeled on the Morbidity and Mortality Conferences which were first established as a training and educational tool for medical doctors. They have now been successfully adopted in veterinary medicine as a forum for case review and learning opportunities, encouraging thorough review from different perspectives. Each chapter presents a real case, and highlights the pitfalls that both novice and experienced veterinarians can encounter. A key theme of the book is on communication issues. Owner perspectives are discussed, as well as how communications between clinicians and owners can be optimized to allow veterinarians to better meet owner expectations. The cases were provided by a variety of experienced veterinarians, primarily specialists in veterinary emergency and critical care, as well as other specialties, general practice, universities, and private institutions. This highly

readable book is suitable either to absorb from cover to cover, or for reference to a specific case or situation. It highlights a number of common clinical problems and communication issues that either did or may lead to difficulties in case management, helping you to avoid these situations.
