LTE Advanced Pro Feb 15 2022 This book presents LTE evolution towards 5G mobile communication and the emergence of new requirements for MBB, MTC and LLC services. As LTE technologies evolve, LTE Advanced Pro dramatically increases cell capacity and user data rates for the MBB unicast service. Such requirements are obtained using full-dimension MIMO, carrier aggregation (on either licensed or unlicensed frequency bands) and dual connectivity. To improve the efficiency of same-content delivery to multiple users, 3GPP proposes a group communications service over LTE and defines mission critical push-to-talk (MCPTT) for dedicated public safety services.

Complementary low-cost and low-power modems with enhanced coverage and massive connectivity are emerging. Thus, this book also discusses the need for LTE to support low-rate transmission and high-latency communication for MTC services.

Active Networks and Active Network Management Mar 26 2020 Active networking is an exciting new paradigm in digital networking that has the potential to revolutionize the manner in which communication takes place. It is an emerging technology, one in which

new ideas are constantly being formulated and new topics of research are springing up even as this book is being written. This technology is very likely to appeal to a broad spectrum of users from academia and industry. Therefore, this book was written in a way that enables all these groups to understand the impact of active networking in their sphere of interest.

Information services managers, network administrators, and e-commerce developers would like to know the potential benefits of the new technology to their businesses, networks, and applications. The book introduces the basic active networking paradigm and its potential impacts on the future of information handling in general and on communications in particular. This is useful for forward-looking businesses that wish to actively participate in the development of active networks and ensure a head start in the integration of the technology in their future products, be they applications or networks. Areas in which active networking is likely to make significant impact are identified, and the reader is pointed to any related ongoing research efforts in the area. The book also provides a deeper insight into the active networking model for students and researchers, who seek challenging topics that define or extend frontiers of the technology. It describes basic components of the model, explains some of the terms used by the active networking community, and provides the reader with taxonomy of the research being conducted at the time this book was written. Current efforts are classified

based on typical research areas such as mobility, security, and management. The intent is to introduce the serious reader to the background regarding some of the models adopted by the community, to outline outstanding issues concerning active networking, and to provide a snapshot of the fast-changing landscape in active networking research. Management is a very important issue in active networks because of its open nature. The latter half of the book explains the architectural concepts of a model for managing active networks and the motivation for a reference model that addresses limitations of the current network management framework by leveraging the powerful features of active networking to develop an integrated framework. It also describes a novel application enabled by active network technology called the Active Virtual Network Management Prediction (AVNMP) algorithm. AVNMP is a pro-active management system; in other words, it provides the ability to solve a potential problem before it impacts the system by modeling network devices within the network itself and running that model ahead of real time.

The One-Minute Presentation Aug 31 2020 Where do I start? What do I say? I don't want to sound like a salesman. How can I relax my prospects? When we are untrained, giving presentations can be difficult. We don't know the real questions in the minds of our prospects. We don't know what triggers a "yes" or "no" decision. Many times, we don't even know where to start. Our fascination with information holds us back. We can't see the big picture because we are drowning in facts. And, what actually is the big picture? It is simply this: Does the prospect want to join our business or not? But what would happen if we changed our entire business presentation model? First, we learn

to get presentation appointments with almost 100% of the people we talk to. Next, we learn to give our entire business presentation in less than one minute. If we could do this, how do we think our prospects will feel? Thrilled! When we can give our entire business presentation in less than one minute, many good things happen. We save time, not only for ourselves, but for our prospect. That makes two people happy. Plus, this gives us the flexibility to give our presentation anywhere, at any time, in any circumstances. And finally, all the sales tension disappears from our prospects when they know our presentation will take only one minute. Learn to make your business grow with this efficient, focused business presentation technique.
