Over the next few years, smart city technologies will be rolled out, and the IoT devices and AI-centric systems will provide even more far-reaching connectivity. This book presents various concepts in the design and development of a smart city and methodologies and solutions involved in designing contemporary infrastructure for building smart cities around the world. The book will focus mainly on six areas of smart city infrastructures: smart city entities, IoT-based solutions, AI-centric control systems, smart systems, cybersecurity mechanisms, data science, and cloud computing for the deployment of the smart ecosystem. AI-Centric Smart City Ecosystem: Technologies, Design, and Implementation will discuss the role of AI-centric innovative systems and beyond intelligent solutions in the smart city framework. Readers will discover how to apply design principles and technologies for operating intelligent cities and develop an understanding of how to integrate AI-based control systems to make systems smarter. The book will present various concepts in the design and development of smart cities and methodologies and solutions involved in designing modern infrastructure. Also, readers can discover how to develop applications and connect the IoT devices for collecting and mining real-time data and uncover the challenges and techniques for improving the automatic operation in the smart city by using high-tech solutions. This book is intended to serve the needs of the industry, engineers, professionals, researchers, and master's and doctoral students studying emerging technologies in smart city ecosystems. Applications of Space Developments covers the proceedings of the 31st Annual Congress of the International Astronautical Federation on Applications of Space Developments, held in Tokyo, Japan. The contributors consider the significant achievements and activities in Japan in the main areas of space applications, such as telecommunications, earth and ocean observation, materials sciences, and space processes. This book is organized into 22 chapters, which reflect the four main areas covered in the Annual Congress, including Earth-Oriented Applications of Space Technology, Earth Observations, Low-Gravity Environment, and Communication Satellites. The first chapters deal with the monitoring of earth and ocean energy resources, earth satellite

power stations, energy conversion and transfer, structure technology, system fabrication and assembly of large space structures, and, nuclear waste disposal in space. The succeeding chapters are devoted to weather satellites, earth and ocean dynamics, earth and atmosphere pollution, payloads for earth and ocean observations, data analysis. These topics are followed by discussions on the theoretical and experimental aspects of microgravity materials, fluid and life sciences, the simulation of microgravity environment on earth, the effects of weightlessness on man, and the earth applications of space experiments. The concluding chapters survey the operational, experimental, and communication satellites systems, with emphasis on economic aspects and on the prospects of TV satellites. This book will prove useful to space scientists and technologists, astronomers, and satellite and communications engineers. Paolo Ulivi provides a well-paced, rapidly moving, balanced, even-handed account of lunar exploration as a popular history. He covers the unmanned programmes, e.g. Ranger, and other American probes in the late '50s and in the later chapters he looks at recent lunar exploration and future plans for the same. It's a book that will be perfect for an enthusiast or someone coming to the story for the first time, as it does not include excessive technical depth. Uniquely drawing on recently declassified documents, detail of Chinese lunar exploration projects is provided, as well as nuclear lunar weapons of the '50s developed by the super powers, Soviet Russia and the United States. Reprint of the original, first published in 1871. V. 1. [no special title] -- v. 2. Creating a rocket industry -- v. 3 Hot days of the Cold War -- v. 4. The moon race. Volume XII of the High Speed Aerodynamics and Jet Propulsion series. Partial Contents: Historical development of jet propulsion; basic principles of jet propulsion; analyses of the various types of jet propulsion engines including the turbojet, the turboprop, the ramjet, and intermittent jets, as well as solid and liquid propellant rocket engines and the ramrocket. Another section deals with jet driven rotors. The final sections discuss the use of atomic energy in jet propulsion and the future prospects of jet propulsion. Originally published in 1959. 類才能穩穩地站在地表。在地球上，物質粒子皆受地球的引力所主宰。在海平面所承受的重力為1G，即每平方秒9.8公尺，相當於人的體重。當物體加、減速時，作用於其上的G力亦不同，分為正G力或負G力。加速度越大，正G力就越強。同理，噴射機在空中轉向時，加速度遽增，飛行員便得承受更強的G力。若飛行員在飛行中承受了正3G的重力，施加於身上的力就相當於自身體重的3倍。減速時亦然：物體的減速度越高，負G力越高。對噴射機飛行員而言，以上情況會在進行翻滾或半外筋斗（bunt，即自旋加上半圈外筋斗）時發生。正是這些問題促成了人體離心機等精密訓練機器的發明，讓飛行員得以在實際飛行前逐步提升抗G力的能耐。 The Soviet / Russian space program was in the hands of three industrial empires: those of Serguei Korolev, the Soviet von Braun who launched Sputnik-1 and Yuri Gagarin, Vladimir Tchelomei, his main competitor, and Mikhail Yangel, Many launchers and satellites in Ukraine. In 2011, we published a first book on the history of the Soyuz launcher that was developed by Korolev and launched more than 1,800 copies. This time, we tell the story of the Proton, the main competitor of the European launcher Ariane, which was developed by Chelomei and launched more than 400 copies. Finally, the last book of the trilogy will deal with the many developments of Yangel. In the three books, the first part deals with the history of rockets in the USSR / Russia (East) and the second part on the history of their commercialization in the West. Theory of Aerospace Propulsion, Second Edition, teaches engineering students how to utilize the fundamental principles of fluid mechanics and thermodynamics to analyze aircraft engines, understand the common gas turbine aircraft propulsion systems, be able to determine the applicability of each, perform system studies of aircraft engine systems for specified flight conditions and preliminary aerothermal design of turbomachinery components, and conceive, analyze, and optimize competing preliminary designs for conventional and unconventional missions. This updated edition has been fully revised, with new content, new examples and problems, and improved illustrations to better facilitate learning of key concepts. Includes broader coverage than that found in most other books, including coverage of propellers, nuclear rockets, and space propulsion to allows analysis and design of more types of propulsion systems Provides in-depth, quantitative treatments of the components of jet propulsion engines, including the tools for evaluation and component matching for optimal system performance Contains additional worked examples and progressively challenging end-of- chapter exercises that provide practice for analysis, preliminary design, and systems integration There is no available information at this time. Author will provide once available. 一般英語學習者在翻譯時常會犯下「望文生義」的錯誤，有時是誤解單字，有時是誤解片語，有時是誤解慣用語，有時是誤解複雜的文法句型，進而誤解英文，翻譯成錯誤的中文，作者蒐集長期從英文教學、翻譯教學、報社與出版社改稿所發現的錯誤，以淺顯易懂的文字解說正確的用法，不僅是準備各類考試翻譯寫作的最佳自修工具書，可增進你的英文翻譯、寫作能力，更進而讓你成為翻譯高手！ 本書共分5回，每回100題，每題後附上評分，讓讀者檢測自己的翻譯程度。 Foothold in the Heavens, the second volume in the A History of Human Space Exploration series, focuses upon the 1970s, the decade in which humanity established real, longterm foothold in the heavens with the construction and operation of the first space stations. It marked a transitional phase between the heady, race-to-the-Moon days of the Sixties and efforts to make space travel more economical, more frequent and more 'routine.' Space exploration in the Seventies, although dominated by Soviet achievement, saw the first efforts of mankind to really 'live' and work in space, producing results of direct benefit to humans on Earth. The emphasis changed from the gung-ho, 'strap-it-on-and-go' pioneers of the Sixties to the more practical exploitation of space for science, medicine, and technology. This book focuses on each mission launched between April 1971 and April 1981: from the launch of the

world's first space station to the end of operations of Salyut 6, and from the expanded, lengthy exploration of the Moon on Apollo 15 to the first flight of the Shuttle.
