Eye movements are a vital part of our interaction with the world. They play a pivotal role in perception, cognition, and education. Research in this field is now proceeding at a considerable pace and casting new light on how the eyes move and what information we can derive during the frequent and brief periods of fixation. However, the origins of this work are less well known, even though much of our knowledge was derived from this research with far more primitive equipment. This book is unique in tracing the history of eye movement research. It shows how great strides were made in this area before modern recording devices were available, especially in the measurement of nystagmus. When photographic techniques were adapted to measure discontinuous eye movements, from about 1900, many of the issues that are now basic to modern research were then investigated. One of the earliest cognitive tasks examined was reading, and it remains in the vanguard of contemporary research.

Modern researchers in this field will be astonished at the subtleties of these early experimental studies and the ingenuity of interpretations that were advanced one and even two centuries ago. Though physicians often carried out the original eye movement research, later on it was pursued by psychologists - it is within contemporary neuroscience that we find these two strands reunited. Anyone interested in the origins of psychology and neuroscience will find much to stimulate and surprise them in this valuable new work. This book represents the culmination of the efforts of a group of outstanding experts in vasculitis from all over the world, who have endeavored to draw themselves into this volume by keeping both the text and the accompanying figures and tables lucid and memorable. The book provides practical information about the screening approach to vasculitis by laboratory analysis, histopathology and advanced image techniques, current standard treatment along with new and more specific interventions including biologic agents, reparative surgery and experimental therapies, as well as miscellaneous issues such as the extra temporal manifestations of "temporal arteritis" or the diffuse alveolar hemorrhage syndrome. The editor and each of the authors invite you to share this journey by one of the most exciting fields of the medicine, the world of Vasculitis. This book contains pedagogical lectures on both theoretical and experimental particle physics, cosmology, and atomic trap physics. Numerous additional contributions provide up-to-date information on new experimental results from accelerators, underground laboratories, and nuclear astrophysics. This combination of pedagogical talks and topical short discussions presents a comprehensive amount of information and latest developments to researchers. Optimization of Pharmaceutical Processes presents contributions from leading authorities in the fields of optimization and pharmaceutical manufacturing. Formulated within structured frameworks, practical examples and applications are given as guidance to apply optimization techniques to most aspects of pharmaceutical processes from design, to lab and pilot scale, and finally to manufacturing. The increasing demand for better quality, higher yield, more efficient-optimized and green pharmaceutical processes, indicates that optimal conditions for production must be applied to achieve simplicity, lower costs and superior yield. The application of such methods in the pharmaceutical industry is not trivial. Quality of the final product is of major importance to human health and the need for deep knowledge of the process parameters and the optimization of the processes are imperative.

The volume, which includes new methods as well as review contributions will benefit a wide readership including engineers in pharmaceuticals, chemical, biological, to name just a few. 17 original compositions written and performed by the modern fingerstyle guitar master. The Early Masters of American Blues series provides the unique opportunity to study the true roots of modern blues. Stefan Grossman, noted roots-blues guitarist and musicologist, has compiled this fascinating collection of 13 songs, transcribed exactly as performed by legendary blues master Rev. Gary Davis. In addition to Stefan's expert transcriptions, the book includes online audio containing the original recordings of Rev. Gary Davis so you can hear the music as he performed it. Reverend Gary Davis, also known as Blind Gary Davis, was a master musician who felt comfortable playing in a wide variety of styles and techniques. He could freely improvise on ragtime, religious and blues themes, and was an exciting and vibrant performer. An ordained minister, Rev. Davis often expressed a preference for gospel music, sometimes refusing to play the blues. In addition to transcribing all the songs in this collection, Stefan Grossman was also a student of Rev. Davis. 106092-106094, 106106-106111 See it \* Hear it \* Play it! A DVD is included with every book in Alfred's MAX[T] series, offering maximum instruction at a minimum price. Now you won't just hear the music, you'll also see how it's done-making it very easy to learn to play. Learn to Play TAB Guitar Complete combines Levels 1 and 2, and the book and DVD work together for lessons you can see and hear. You'll start with the basics like holding the guitar, reading music & TAB, and playing chords, then move on to specific techniques for several guitar-playing styles and genres. Styles covered include blues, rock, jazz, classical, and folk, and you'll hear every example performed by a live guitarist. This is an excellent way to get started playing guitar and advance to an intermediate skill level! 152 pages.
