Social Terrains of Mine Closure in the Philippines Sep 30 2020 The current discourse on mine closure is informed predominantly by industry and corporate perspectives and predicated by experiences of mainly mining companies that are based in developed countries where necessary planning frameworks and regulatory requirements are well-established. Mine closure planning, well promoted and accepted as good business practice in the global minerals industry, has been primarily technical and precautionary both in approach and focus. Planning, modelling and monitoring strategies incorporate comprehensive and detailed elements such as properties inherent in landforms, climate, geology, flora and fauna, among others. However, locality-based concerns that revolve around resource access and tenure, rights and entitlements tied to locality and indigeneity, labour recruitment, and other non-bio-physical elements are hardly examined. Any mine closure program that omits these elements is deficient and therefore ineffective. *Social Terrains of Mine Closure in the Philippines*, based on ethnographic research and archival materials, presents the varying experiences of three mines to demonstrate that the mine closure process is an intense locus for competition and compromises among various social actors. This book offers key messages for understanding the complex socio-cultural, economic, political, and business realities that make up the social terrains of mine closure, and will be of great interest to students and researchers in development studies, community development, business studies, anthropology, and sociology. It will also appeal to those working in the global minerals sectors and NGOs that engage in development work and advocacy for responsible mining.

Impact of Closure of Reserve Mining Company, Problems Identified, Strategies and Proposals to Address Needs of Citizens and Local Units of Government in Northeastern Minnesota Jan 15 2022

Closing Maintenance Depots Oct 12 2021 Assesses the reliability of the Department of Defense's depot closure cost and savings estimates; and information on the policies and programs used to provide employment and training opportunities to employees at closing depots. Determines if the military services can increase savings by using competition between DoD depots (public-private competitions) and the private sector. Determines if the military services adequately consider other service depots when using methods other than competition. Charts, tables and graphs.

HC 928 - Impact of the Closure of City Link on Employment Aug 22 2022 There will always be those who lose out when a company goes into administration and cannot cover all of its debts. However, the current system does not represent the appropriate balance, since those who have given secure credit to a company are cushioned from the full impact of an insolvency, because the losses are borne by those who work for a company on a self-employed basis, or as contractors or suppliers. Under the current rules it is clearly in the financial interest of a company to break the law, and ignore the statutory redundancy consultation period, if the fine for doing so is less than the cost of continuing to trade, especially since this fine will anyway be paid by the taxpayer. However, while the financial calculation is simple, ignoring the consultation period has a high human cost that appears not to have featured in the decision making process at City Link. Employees were denied a reasonable notice period in which to seek alternative employment and instead, at a time of financial uncertainty, have to pursue a court claim for lack of consultation if they wish to be compensated. While there were differences of opinion as to whether or not City Link could be made viable, and the desired level of return could be achieved, the Committees regret that Better Capital felt its investors' interests could only be protected at the expense of the future of

City Link and continued employment for its workers

Annual Report ... Jul 09 2021

Role of Clean Air Act Requirements in Anaconda Copper Company's Closure of Its Montana Smelter and Refinery Feb 16 2022 The U.S. Environmental Protection Agency (EPA) was introduced on December 2, 1970 by President Richard Nixon. The agency is charged with protecting human health and the environment, by writing and enforcing regulations based on laws passed by Congress. The EPA's struggle to protect health and the environment is seen through each of its official publications. These publications outline new policies, detail problems with enforcing laws, document the need for new legislation, and describe new tactics to use to solve these issues. This collection of publications ranges from historic documents to reports released in the new millennium, and features works like: Bicycle for a Better Environment, Health Effects of Increasing Sulfur Oxides Emissions Draft, and Women and Environmental Health.

The Closure of MG Rover Nov 13 2021 MG Rover went into administration in April 2005 when its proposed deal with a Chinese company (SAIC) collapsed and it did not have sufficient cash to continue trading. The subsequent closure of MG Rover's plant at Longbridge in the West Midlands resulted in the direct loss of almost 6,000 jobs and with potentially serious consequences for the local economy. This NAO report examines the support provided to MG Rover by the DTI and other public bodies before and during the Company's collapse in 2005, and on the effectiveness of plans to deal with and mitigate the consequences of the firm's closure. Amongst the conclusions drawn, the report identifies weaknesses in the DTI's contingency planning and questions the cost-effectiveness of the DTI's loan of £6.5 million designed to sustain the business for a week while the administrators sought to sell the Company as a going concern. The report goes on to make a number of recommendations to improve future decision-making, contingency planning, and the delivery of training and support in the event of a large-scale company failure.

Failing Banks Apr 06 2021 Addresses why the FDIC Board of Directors decided to resolve First City's financial difficulties in 1988 by providing financial assistance instead of using other available resolution alternatives and what lessons does the First City experience offer relevant to the assistance, closure and resolution processes?

The Social Impacts of Mine Closure in South Africa Aug 10 2021 This book investigates the relationship between mining, mine closure and housing policy in post-apartheid South Africa, using concepts from new institutional economics and evolutionary governance theory. Mine closures present a major challenge to the mining industry and governments, with this being particularly noticeable in the Global South. This book argues that the dependencies created by the mining industry and mine housing policies while a mine is operational cause serious societal problems when it closes. To demonstrate this, the book applies the concepts of place attachment, asset-based development and social disruption. Conceptually, the book challenges the view that place attachment and asset-based development are the most appropriate and often the only policy responses in mining areas. In South Africa, the mining industry and the government have created comprehensive housing programmes linked to homeownership to promote place attachment, stability and wealth among mine workers. These programmes do not consider the disruption that mine closure might bring. The book challenges the blind application, during boom periods, of policies which create long-term dependencies that are difficult to manage when a mine closes. This book will be of interest to students and scholars researching the social impacts of mining and the extractive industries, social geography and sustainable development, as well as policymakers and practitioners working with mine closure or social impact assessments.

Defense Base Closure and Realignment Commission May 07 2021 Contains all military bases within each branch of the armed services. Examines the Commission's findings, discusses current activities at specific bases, and makes recommendations.

Considers community concerns about base closures and realignments. Analyzes the history of base closures and the procedures for decision-making. Note: this is the last report by the Commission.

Retreat from the Regions Nov 25 2022 Multi-plant companies are the dominant component of most regional economies. For much of the post-war period such companies enjoyed unprecedented expansion, but for more than a decade now they have been involved in major restructuring, leading to the closure of factories and to redundancy for thousands of workers. As a result, some localities have been plunged into a recession from which they have not recovered.

Closure of Underground Copper Mines Mar 25 2020

Historic Bottle and Jar Closures Jul 29 2020 This book presents a much-needed review of commercial closures for bottles and jars used in America prior to World War II. Archaeological attention to commercial closures has been rather limited. This is surprising given that data derived from bottles and jars pertain to a wide range of studies, including chronological control, trade, site functions, and methods of manufacture. Closures are an integral part of these studies, becoming particularly important after a spectacular variety of metal and glass caps in the late nineteenth and early twentieth centuries. This volume-provides a comprehensive review, including detailed closure definitions, as well as glass finishes;-discusses the history of the development and impact of the hermetic seal in commercial closures;-will appeal to students, professionals, and collectors studying this common historic artifact class.

Tight Closure and Its Applications Sep 23 2022 This monograph deals with the theory of tight closure and its applications. The contents are based on ten talks given at a CBMS conference held at North Dakota State University in June 1995. Tight closure is a method to study rings of equicharacteristic by using reduction to positive characteristic. In this book, the basic properties of tight closure are covered, including various types of singularities, e.g. F-regular and F-rational singularities. Basic theorems in the theory are presented including versions of the Briançon-Skoda theorem, various homological conjectures, and the Hochster-Roberts/Boutot theorems on invariants of reductive groups. Several applications of the theory are given. These include the existence of big Cohen-Macaulay algebras and various uniform Artin-Rees theorems. It features: the existence of test elements; a study of F-rational rings and rational singularities; basic information concerning the Hilbert-Kunz function, phantom homology, and regular base change for tight closure; and, numerous exercises with solutions.

Closure Mar 29 2023 For over 2000 years our culture has believed in the possibility of a single true account of the world. Now this age is coming to a close. As a result there is a deep unease. We are lost both as individuals, and as a culture. In the new relativistic, post-modern era, we have no history, no right or moral action, and no body of knowledge. In their place is a plethora of alternative, and sometimes incompatible theories from 'fuzzy logic' to 'consilience' proposing a theory of everything. Closure is a response to this crisis. It is a radically new story about the nature of ourselves and of the world. Closure exposes the central questions of contemporary philosophy: language and meaning, of the individual and identity, of truth and reality, but it is also philosophical in the broader everyday sense that it enables us to make sense of where and who we are. A central principle, the process of closure, is shown to be at the heart of experience and language. As a theory of knowledge it has dramatic consequences for our understanding of the sciences, involving a reinterpretation of what science does and how it is able to do it. It similarly proposes a profound shift in the role of art and religion. But, above all, it reshapes our understanding of ourselves and the organisation of society, our goals and our capacity to achieve them. A superb new account of how order is created out of disorder, Closure is an exhilarating work of conceptual geography.
