This volume collects original theoretical work on the syntax and morphology of Italian and a wide range of Italian dialects. It contains contributions by such leading figures as Cecilia Poletto, Guglielmo Cinque, and Richard Kayne, and examines topics such as the syntax of "ne", the internal structure of personal pronouns, the syntax/morphology interface, and functional projections at the clausal level. This book analyses the development of a number of English and French constructions involving various kinds of subject-verb inversion. The analysis is framed in terms of the principles-and-parameters approach to syntactic theory, and provides strong support for the adoption of this approach in the description and explanation of language change. The book falls into three parts. The first presents an overall framework for the analysis of inversion constructions and motivates, on the basis of synchronic data, several parameters which distinguish among the various Romance and Germanic languages. The second part shows how several near-simultaneous syntactic changes in the history of French can be explained as a change in one of the parameters introduced in Chapter One. A notable aspect of this analysis is the way in which the distribution of null subjects is shown to relate to verb-placement. The third part of the book treats verb-movement in the history of English, arguing in detail that the attested changes in this area are due to a change in the internal structure of 'Infl', a proposal which has important ramifications for the theory of functional heads. Throughout the book, emphasis is placed on the theoretical questions raised by language change. In this connection the two notions of diachronic reanalysis and parametric change are distinguished. *Verbs and Diachronic Syntax* will interest all theoretical linguists as well as specialists in the history of English, history of French, Germanic philology and Romance philology. This book investigates one concrete compounding pattern in present-day Italian within a larger overview of Italian compounding. Various accounts and classifications of Noun + Noun combinations in Italian are reviewed, with special focus on the status of the lexical integrity hypothesis. The author sets out to propose an integrated approach to the Noun + Noun compounding pattern, rigorously based on large representative data sets that were extracted from the Italian web corpus ItWaC as both automatically and manually post-processed frequency lists. On the basis of such data, it is aimed to show the behaviour of various subtypes of Noun + Noun compounds. Starting out with the Bisetto-Scalise classification, the author carefully examines the status of coordinate compounds, ATAP compounds (i.e., the group comprising attributive and appositive structures) and subordinate compounds (comprising verbal-nexus and grounding compounds), discussing both theoretical and empirical implications of this classification scheme. Moreover, the original Bisetto-Scalise model is supplemented with further classification levels in order to capture specific compounding types such as relational (i.e. inherently trinominal) compounds. A major merit of the present study lies in the quantitative dimension of the data it deals with. In light of this data, the author emphasizes the gradient nature of the traditional dichotomy between syntax and compounding. The book will thus appeal not only to the linguists interested specifically in Italian word-formation, but also to a larger community of scholars who seek a more general view of the word-formation phenomena. South Picene is the pre-Roman language spoken in the Adriatic sector of central Italy. This book presents a description of what we know about the structure of this language. South Picene is (together with Umbrian, Oscan, Latin, and Faliscan) one of the few members of the Italic branch of the Indo-European family and is also one of the European languages with the oldest existing texts (550 BCE). Besides a grammatical outline of the language, the book contains the linguistic (and often stylistic) analysis of all the 21 inscriptions that compose the South Picene epigraphic corpus and a word list. South Picene will be

of interest to students and scholars of Indo-European languages, Italic languages, and in general, ancient languages of the Italian peninsula.

### 1.0 INTRODUCTION

This book provides an encompassing analysis of Subject Clitics (SCLs) by giving a detailed description of these elements in two varieties of Piedmontese, a Northern Italian Dialect: Astigiano and Turinese spoken in the areas of Asti and Turin respectively. It accounts for the structural position and function of these elements inside the computational system and for their morphological and distributional properties. It also provides an empirical and theoretical comparison between Piedmontese SCLs and SCLs in other Northern Italian Dialects (NIDs). of SCLs types in the NIDs have been regarded as Since the 1980s, the majority elements of agreement, in that they contribute to the realisation of subject verb agreement by expressing features of the subject similar, in a way, to verbal inflection. Nonetheless, SCLs are not to be assimilated to verbal affixes as they exhibit different properties. Most distinctively, they can be separated from the verb by other clitic elements and, in the case of the varieties considered here, SCLs are optional in all contexts and may be omitted in coordination. A more refined identification of SCLs separates SCLs which encode agreement features from those which do not and are related to pragmatic factors, as originally observed by Beninca (1994) with respect to the clitic *a* in Paduano The different morphological and syntactic properties that characterise SCLs across the NIDs have justified numerous accounts which regard them as head of their own projection. This bibliography provides an alphabetical listing of over 1500 articles, books, and dissertations that treat in some way the topic of clitics and related matters, e.g. affixes, words, word order, movement, sandhi, etc. The beginning point for the bibliographic entries is 1892, taking Jacob Wackernagel's classic work as the point of departure, and the entries cover the subsequent 100-year period. Each entry is accompanied by a series of descriptors which give an indication of the content of the item. Nearly one-third of the book is a detailed analytic index, based on the descriptors, which can aid in topical searches for relevant material. Prefatory matter includes an essay "What is a Clitic?" by Arnold M. Zwicky, a brief consideration of Wackernagel's scholarly career by Brian D. Joseph, and information on the format and use of the book itself. The Routledge Introduction to Italian Linguistics offers a systematic and comprehensive overview of the linguistic structure of the Italian language, including phonetics and phonology, morphology and morphosyntax, syntax, semantics, and sociolinguistics. The manual includes a historical sketch of the Italian language, which outlines the central phases of its emergence and process of standardization. Written in clear, concise language and taking a descriptive, theory-neutral approach, this is the ideal companion for advanced students of the Italian language and those studying Italian and Romance linguistics. After sketching the most important phases of the process of standardization of Italian and introducing the main varieties of Italian as classified from a social and geographical perspective, this introductory text addresses the core topics of Italian linguistics as pertaining to the sound system and word and sentence structure. The text adopts a descriptive approach and requires no previous knowledge of linguistics since technical terms are carefully explained and illustrated by numerous examples. Thus, it can serve as a reference tool for instructors of Italian and anyone interested in advancing their knowledge of the Italian language or familiarizing themselves with Italian linguistics. This work investigates the syntax of the higher portion of the functional structure of the clause using comparative data from hundreds of Northern Italian dialects. The area contains dialects that are different in most ways yet homogenous syntactically, making it an ideal ground for analyzing micro-variations in syntax. The book sheds new light on debated problems such as subject-clitic inversion, verb movement and subject positions, and the structure of the higher functional phrases. The volume assembles about 50 contributions presented at the International Colloquium on Ancient Greek Linguistics, held in Rome, March 2015. This Colloquium opened a new series of international conferences that has replaced previous national meetings on this subject. They embrace essential topics of Ancient Greek Linguistics with different theoretical and methodological approaches: particles and their functional uses; phonology; tense, aspect, modality; syntax and thematic roles; lexicon and onomastics; Greek and other languages; speech acts and pragmatics. Relative clauses play a hugely important role in analysing the structure of sentences. This book provides the first evidence that a unified analysis of the different types of relative clauses is possible - a step forward in our understanding. Using careful analyses of a wide range of languages, Cinque argues that the relative clause types can all be derived from a single, double-headed, structure. He also presents evidence that restrictive, maximalizing, ('integrated') non-restrictive, kind-defining, infinitival and participial RCs merge at different heights of the nominal extended projection. This book provides an elegant generalization about the structure of all relatives. Theoretically profound and empirically rich, it promises to radically alter the way we think about this subject for years to come. This book explores the linguistic expression of identity, intended as the social positioning of self and others, by focusing mostly on a scenario of prolonged language contact, namely the ancient Mediterranean area. The volume includes studies on language contact and on identity strategies developed at different levels of analysis, from phonetics to pragmatics, in, among others, Latin, Greek, Coptic, Syriac, (Cypriot) Arabic, Medieval Sardinian. This book, by leading scholars, represents some of the main work in progress in biolinguistics. It offers fresh perspectives on language evolution and variation, new developments in theoretical linguistics, and insights on the relations between variation in language and variation in biology. The authors address the Darwinian questions on the origin and evolution of language from a minimalist perspective, and provide elegant solutions to the evolutionary gap between human language and communication in all other organisms. They consider language variation in the context of current biological approaches to species diversity - the 'evo-devo revolution' - which bring to light deep homologies between organisms. In dispensing with the classical notion of syntactic parameters, the authors argue that language variation, like biodiversity, is the result of experience and thus not a part of the language faculty in the narrow sense. They also examine the nature of this core language faculty, the primary categories with which it is concerned, the operations it performs, the syntactic constraints it poses on semantic interpretation and the role of phases in bridging the gap between brain and syntax. Written in language accessible to a wide audience, *The Biolinguistic Enterprise* will appeal to scholars and students of linguistics, cognitive science, biology, and natural language processing. The Principles-and-Parameters approach to linguistic theory has triggered an enormous amount of work in comparative syntax over the last decade or so. A natural consequence of the growth in synchronic

comparative work has been a renewed interest in questions of diachronic syntax, and this collection testifies to that trend. These papers focus on questions of clause structure which have become a central theme of theoretical work since the pioneering work in the late 1980s by Chomsky, Pollock, and others. The languages studied by an international roster of contributors include all the major Romance and Germanic languages. This volume is of central importance for anyone working in theoretical, comparative, or historical syntax. Asymmetry in Grammar: Syntax and Semantics brings to fore the centrality of asymmetry in DP, VP and CP. A finer grained articulation of the DP is proposed, and further functional projections for restrictive relatives, as well as a refined analyses of case identification and presumptive pronouns. The papers on VP discuss further asymmetries among arguments, and between arguments and adjuncts. Double-object constructions, specificational copula sentences, secondary predicates, and the scope properties of adjuncts are discussed in this perspective. The papers on CP propose a further articulation of the phrasal projection, justifications for Remnant IP movement, and an analysis of variation in clause structure asymmetries. The papers in semantics support the hypothesis that interpretation is a function of configurational asymmetry. The type/token information difference is further argued to correspond to the partition between the upper and lower level of the phrase. It is also proposed that Point of View Roles are not primitives of the pragmatic component, but are head-dependent categories. Configurationality is further argued to be required to distinguish contrastive from non-contrastive Topic. Compositionality is proposed to explain cross-linguistic variations in the selectional behavior of typologically different languages. The papers in syntax include contributions from Antonia Androutsopoulou and Manuel Español-Echevarría, Dana Isac, Edit Jakab, Cedric Boeckx, Julie Anne Legate, Maria Cristina Cuervo, Jacqueline Guéron, Niina Zhang, Thomas Ernst, Manuela Ambar, Jean-Yves Pollock, Anna Maria Di Sciullo, Ilena Paul and Stanca Somesfalean. The papers on semantics include contributions of Greg Carlson, Peggy Speas and Carol Tenny, Chungmin Lee, and James Pustejovsky. This volume features a variety of essays on writing for children, ranging from studies of classic authors to an analysis of the role of pictures in children's books, to an examination of comics and theatre for the young. The Rhaeto-Romance languages have been known as such to the linguistic community since the pioneering studies of Ascoli and Gartner over a century ago. There has never been a community of RR speakers based on a common history or polity and the various dialects are mutually unintelligible, but a unity, based on a number of common features, has been advanced. This book is the first general description of the Rhaeto-Romance languages to be written in English. It provides a critical examination of the phonology, morphology, lexicon, and syntax of the modern Rhaeto-Romance dialects within the broader perspective of Romance comparative linguistics. This volume presents a cross-section of current research on the internal syntax of 'Determiner Phrases' (DPs), with special emphasis on the analysis of DPs modified by genitival, adjectival and other non-finite attributes. Possessors, Predicates and Movement in the DP illustrates clearly the ongoing debate over older and more recent approaches to the syntax of DPs in particular in the wake of the minimalist program (Chomsky 1995) and Kayne's antisymmetry hypothesis (Kayne 1994). The relative theoretical coherence among the contributions permits detailed comparison of specific syntactic proposals, providing a solid basis for further debate. Several of the papers address the syntactic questions in parallel with related semantic or morphological issues. The value of this collection to the study of Universal Grammar is also underlined by its comparative bias. Analyses of Germanic, Romance and Balkan languages figure prominently, and a number of new empirical generalizations within and between languages are discussed. The study of Greek and Roman language science has figured prominently in the remarkable renaissance of interest in the history of linguistics of the last twenty years. We know more now than we did several decades ago about what the Greeks and Romans were thinking, writing, and doing in matters grammatical, and the scholars who contribute to this volume are among the ones who are responsible for that happy circumstance. The contents of this book bear ample testimony to the enhanced and enlarged understanding and appreciation of ancient grammar that we now enjoy. Each article in this volume has something new to say about the history of linguistics in the classical period, and each author insists that we need to return to ancient texts time and time again and that we need to read them even more carefully. The rethinking so conspicuous in much of the recent scholarship in this field is pointing in the direction of a new historiographical model of Greek and Latin linguistic science. The text of this volume has also been published in "Historiographia Linguistica" XIII:2/3. The series is a platform for contributions of all kinds to this rapidly developing field. General problems are studied from the perspective of individual languages, language families, language groups, or language samples. Conclusions are the result of a deepened study of empirical data. Special emphasis is given to little-known languages, whose analysis may shed new light on long-standing problems in general linguistics. This book makes accessible the major structural features of the dialects of Italy and emphasises the importance of a detailed understanding of the dialects for issues in general linguistic theory. The book sheds new light on debated problems such as subject-clitic inversion, verb movement and subject positions, and the structure of the higher functional phrases. This book assembles a collection of papers in two different domains: formal syntax and neurolinguistics. Here Moro provides evidence that the two fields are becoming more and more interconnected and that the new fascinating empirical questions and results in the latter field cannot be obtained without the theoretical base provided by the former. The book is organized in two parts: Part 1 focuses on theoretical and empirical issues in a comparative perspective (including the nature of syntactic movement, the theory of locality and a far reaching and influential theory of copular sentences). Part 2 provides the original sources of some innovative and pioneering experiments based on neuroimaging techniques (focusing on the biological nature of recursion and the interpretation of negative sentences). Moro concludes with an assessment of the impact of these perspectives on the theory of the evolution of language. The leading and pervasive idea unifying all the arguments developed here is the role of symmetry (breaking) in syntax and in the relationship between language and the human brain. Series statement "Oxford linguistics" from jacket. Deixis as a field of research has generated increased interest in recent years. It is crucial for a number of different subdisciplines: pragmatics, semantics, cognitive and contrastive linguistics, to name just a few. The subject is of particular interest to experts and students, philosophers, teachers, philologists, and psychologists interested in the study of their language or in comparing linguistic structures. The different deictic structures – not only the items themselves, but also the oppositions between them – reflect the fact that neither the notions of space, time, person nor our use of them are identical cross-culturally. This diversity is not restricted to the difference between languages, but also appears among related dialects and language varieties. This volume will provide an overview of the field, focusing on Romance languages, but also reaching beyond this perspective. Chapters on diachronic developments (language change), comparisons with other (non-)European languages, and on interfaces with neighboring fields of interest are also included. The editors and authors hope that readers, regardless of their familiarity with Romance languages, will gain new insights into deixis in general, and into the similarities and differences among deictic structures used in the languages of the world. Every human language has some syntactic means of distinguishing a negative from a non-negative sentence; in other words, every speaker's syntactic competence provides a means to express sentential negation. This ability, however, may be expressed in different ways, as shown by the fact that individual languages employ different syntactic strategies for the expression of the same semantic function of negating a sentence. Zanuttini's goal here is to characterize the range of such variation by comparing the different syntactic means for expressing sentential negation exhibited by the members of one language family--the Romance languages--and by reducing the differences we witness to a constrained set of choices available to the particular grammars of these languages. This sort of analysis is a first step towards the ultimate goal of determining and understanding what limits there are on the syntactic options that universal grammar imposes on the expression of sentential negation. In this volume Silvio Cruschina uses a comparative analysis to determine the syntax of the functional projections associated with discourse-related features, and to account for the marked word orders found in Romance--particularly in the fronting phenomena. Several language-specific analyses of discourse-related phenomena have been proposed in the literature, including studies on the notions of topic and focus in Romance, but the lack of a uniform definition of these notions, together with different assumptions in relation to the triggering features, has led to the perception that the Romance languages show many distinct and heterogeneous properties with respect to dislocation and fronting constructions. This volume is intended to complement the existing literature by integrating recent work on the topic and by emphasizing original and unifying reflections that combine and coordinate diverse elements. Cruschina's investigations clarify fundamental notions such as topic, focus, and contrast, drawing on new data from Sicilian, Sardinian, and other Romance varieties. The alternation between the auxiliaries BE and HAVE, which this collection examines, is often discussed in connection with generative analyses of split intransitivity. But this book's purpose is to place the phenomenon in a broader context. Well-known facts in the Romance and Germanic language families are extended with data from lesser studied languages and dialects (Romanian, Paduan), and also with experimental and historical data. Moreover, the book goes beyond the usual language families in which the phenomenon has been studied, with the inclusion of two chapters on Chinese and Korean. The theoretical background of the contributors is also broad, ranging from current Generative approaches to Cognitive and Optimality-Theoretical frameworks. Readers interested in the structural, historical, developmental, or experimental aspects of auxiliary selection should profit from this book's comprehensive empirical coverage and from the plurality of contemporary linguistic analyses it contains. This book constitutes the refereed proceedings of the 11th International Conference, NooJ 2017, held in Kenitra and Rabat, Morocco, in May 2017. The 20 revised full papers presented in this volume were carefully reviewed and selected from 56 submissions. NooJ is a linguistic development environment that provides tools for linguists to construct linguistic resources that formalize a large gamut of linguistic phenomena: typography, orthography, lexicons for simple words, multiword units and discontinuous expressions, inflectional and derivational morphology, local, structural and transformational syntax, and semantics. The papers in this volume are organized in topical sections on vocabulary and morphology; syntactic analysis; natural language processing applications; NooJ's future.
