Research paper from the year 2010 in the subject English - Miscellaneous, grade: 1,3, , language: English, abstract: „One cannot not communicate“ (Watzlawick et al. 1969/2007, p. 53 ). Paul Watzlawick's quote is one of the most important basic assumptions in the field of communication studies. There is no substitute for behavior, so every kind of behavior is a type of communication. Therefore, it is not possible not to communicate. Based on this fact and the further fact that every social interaction contains a type of communication, it is important to find and study the areas where we can further our communication skills. Since its discovery Neuro-linguistic Programming (NLP) can be found in nearly every western industrial country. There are many types of training and coaching available. Companies use NLP for their human resource development, especially for their specialist and executive staff. But what is behind NLP which is likely to be announced as an omni-potent method? Is it just a profitable commercial theory or can advantages be found concerning the communication process? The intention of the current seminar paper is an initial introduction to the wide field of NLP and to present some ways to improve communication skills. After a short introduction, concerning the origin and development of NLP, chapter 2 presents two main principles of the NLP model. Chapter 3 will provide an overview of main elements of Neuro-linguistic Programming and the following chapter gives an overview of basic methods and techniques to show how you can develop

your communication skills. The seminar paper will be completed with an overview of the fields of application and a résumé. This volume focuses on natural language processing, artificial intelligence, and allied areas. Natural language processing enables communication between people and computers and automatic translation to facilitate easy interaction with others around the world. This book discusses theoretical work and advanced applications, approaches, and techniques for computational models of information and how it is presented by language (artificial, human, or natural) in other ways. It looks at intelligent natural language processing and related models of thought, mental states, reasoning, and other cognitive processes. It explores the difficult problems and challenges related to partiality, underspecification, and context-dependency, which are signature features of information in nature and natural languages. Key features:

- Addresses the functional frameworks and workflow that are trending in NLP and AI
- Looks at the latest technologies and the major challenges, issues, and advances in NLP and AI
- Explores an intelligent field monitoring and automated system through AI with NLP and its implications for the real world
- Discusses data acquisition and presents a real-time case study with illustrations related to data-intensive technologies in AI and NLP

They probably know that people take in information about the world through a 'preferred representational channel' and that we communicate better with people if we use their preferred channel - visual, auditory or kinaesthetic. Sally Dimmick's book goes further. It shows how NLP principles can be applied to every aspect of training and which particular aids and methods are the most suitable for each channel. The first part of the text outlines the main concepts of NLP and explains how to identify a person's preferred channel. It also looks briefly at the significance of learning styles. Part II examines each representational channel in turn and relates it to the corresponding training methods and materials. The final chapter provides ways of combining the channels so as to maximize the transfer of learning. The text is enlivened throughout by anecdotes, examples and illustrations. For teachers, trainers, managers and indeed anyone faced with the need to communicate in a professional way, Sally Dimmick's guide will prove invaluable. It will be particularly welcomed by trainers looking for practical advice on how to use NLP. Over the years, NLP has developed into a powerful psychological approach for detecting and overcoming limiting beliefs and unconscious biases that become barriers to achieving success. Inside, you will learn all about NLP, including how it works, the science behind it, and how you can begin using its techniques to overcome your own fears, biases, and limiting beliefs! In this book international academics, researchers and therapists are brought together to examine the current evidence of the clinical efficacy of NLP techniques, considering how NLP can be effective in facilitating change, enrichment and symptom relief. Lisa Wake and her colleagues provide a critical appraisal of evidence-based research in the area to indicate the benefits of the approach and identify the need for an increase in randomized well-controlled clinical trials. Contributors also explore how NLP has been used to treat various disorders including: post-traumatic stress disorder phobias addictions anxiety disorders mild depression.
