The Situational Judgement Test at a Glance Sep 21 2022 The Situational Judgement Test at a Glance provides a sound introduction to the SJT and details ways you can prepare before the assessment. It includes worked case examples based on real-life scenarios which have been reviewed by experienced clinicians and examiners. The book draws out key aspects of professional practice relevant to the role of a junior doctor. This is based on the nine domains as outlined by the ISFP (Improving Selection to Foundation Programme), who detailed the behaviours necessary to be a competent Foundation Doctor. The overall aim of The Situational Judgement Test at a Glance is not to spoon feed hundreds of practice questions or reams of guidelines, but to steer

you towards a logical way of approaching best medical practice – and therefore the SJT– with many examples of doctors' personal experiences along the way. Challenging scenarios are analysed using guidelines from the General Medical Council and research interviews with patients, lab staff and healthcare professionals. All examples in the book are worked in a test-style apparatus, with questions on one side and detailed answers over the page so you can understand the reasoning behind the material.

Situational Judgement Test for the Foundation Years Programme Jan 13 2022 'Situational Judgement Test for the Foundation Years Programme' has been specially designed to help you achieve the highest possible mark in the UKFPO SJT exam. This 2nd edition, in line with the latest GMC Good Medical Practice 2013 Guidelines, contains a wide range of SJT scenarios to ensure that all the core Foundation Programme competencies are comprehensively covered. The SJTs contained in this book have been through a rigorous appraisal process that brought together the experiences of over 50 doctors from varying levels and specialities, including multiple Foundation Training Programme Directors. This ensured that the scenarios, and their respective responses, were valid and relevant to both the SJT exam, and the Foundation Programme curriculum. The book also involved professionals with backgrounds inclusive of medical law, medical ethics, psychology and medical education, all of whom helped in sewing together realistic and challenging scenarios with valuable learning points. The questions in this book were piloted amongst junior doctors to further help validate the consistency of the responses. The explanations provided in this book are supported by numerous references to the GMC guidelines, in order to maximise their reliability, and provide a clear rationale for the correct answers. A number of the doctors who participated in the design of this book had

firsthand experience of the National SJT Pilot Exam, and thus provided a unique insight into question format, style and design. This book not only offers valuable exam practice, but also equips the reader with the skills, aptitude and knowledge base to effectively cope with complex scenarios as they move on to their working life.

Measuring Human Capabilities Jan 21 2020 Every year, the U.S. Army must select from an applicant pool in the hundreds of thousands to meet annual enlistment targets, currently numbering in the tens of thousands of new soldiers. A critical component of the selection process for enlisted service members is the formal assessments administered to applicants to determine their performance potential. Attrition for the U.S. military is hugely expensive. Every recruit that does not make it through basic training or beyond a first enlistment costs hundreds of thousands of dollars. Academic and other professional settings suffer similar losses when the wrong individuals are accepted into the wrong schools and programs or jobs and companies. Picking the right people from the start is becoming increasingly important in today's economy and in response to the growing numbers of applicants. Beyond cognitive tests of ability, what other attributes should selectors be considering to know whether

an individual has the talent and the capability to perform as well as the mental and psychological drive to succeed? *Measuring Human Capabilities: An Agenda for Basic Research on the Assessment of Individual and Group Performance Potential for Military Accession* examines promising emerging theoretical, technological, and statistical advances that could provide scientifically valid new approaches and measurement capabilities to assess human capability. This report considers the basic research necessary to maximize the efficiency, accuracy, and effective use of human capability measures in the military's selection and initial occupational assignment process. The research recommendations of *Measuring Human Capabilities* will identify ways to supplement the Army's enlisted soldier accession system with additional predictors of individual and collective performance. Although the primary audience for this report is the U.S. military, this book will be of interest to researchers of psychometrics, personnel selection and testing, team dynamics, cognitive ability, and measurement methods and technologies. Professionals interested in of the foundational science behind academic testing, job selection, and human resources management will also find this report of interest.

Validity and Reliability of a Mini-situational Judgement Test (SJT) for Pilots Feb 20 2020 Situational judgment test (SJT) was developed by Hunter (2002) to test pilot judgment. SJT is very useful. However, this test takes too long for participants to complete. A mini-SJT was developed with shortened questions. The purpose of this research was to determine the reliability and validity of mini-SJT comprised of 16 of the original 51 questions. Validity and reliability were the two key elements in psychometrics. Face validity was used as a method to measure validity. Reliability was determined by Cronbach's Alpha, the correlation of split-half and even-odd, and

Pearson's correlation of test retest. Participants were general pilots from Sun N Fun airshow and student pilots from FIT. Four experts from different backgrounds agreed that face validity had been determined. Results from SPSS showed that the Cronbach's alpha, the correlation of split-half and even-odd tests was in the acceptable range. The Pearson's correlation was in the moderate level. The results showed that the mini-SJT could maintain validity and reliability. The administration time could reduce. Mini-SJT could be more convenient to use and could be used more widely.
