***Philosophy and Psychology of Time* Oct 08 2020** This book is an edited collection of papers from international experts in philosophy and psychology concerned with time. The collection aims to bridge the gap between these disciplines by focussing on five key themes and providing philosophical and psychological perspectives on each theme. The first theme is the concept of time. The discussion ranges from the folk concept of time to the notion of time in logic, philosophy and psychology. The second theme concerns the notion of present in the philosophy of mind, metaphysics, and psychology. The third theme relates to continuity and flow of time in mind. One of the key questions in this section is how the apparent temporal continuity of conscious experience relates to the possibly discrete character of underlying neural processes. The fourth theme is the timing of experiences, with a focus on the perception of simultaneity and illusions of temporal order. Such effects are treated as test cases for hypotheses about the relationship between the subjective temporal order of experience and the objective order of neural events. The fifth and the final theme of the volume is time and intersubjectivity. This section examines the role of time in interpersonal coordination and in the development of social skills. The collection will appeal to both psychologists and philosophers, but also to researchers from other disciplines who seek an accessible overview of the research on time in psychology and philosophy.

Psychology for the Third Millennium Oct 20 2021 Electronic Inspection Copy available for instructors here As the 21st Century opened, the discipline of psychology seemed to be separating into two radically distinct domains. Qualitative and Cultural Psychology focused on the discursive means for the management of meaning in a world of norms, while Neuropsychology and Neuroscience focused on the investigation of brain processes. These two domains can be reconciled in a hybrid science that brings them together into a synthesis more powerful than anything psychologists have achieved before. For the first time, there is the possibility of a general psychology in which the biological and the cultural aspects of human life coalesce into a *unitas multiplex*, unity in diversity. This textbook ambitiously aims to and succeeds in providing this unity. Fathali M. Moghaddam and Rom Harré have designed a textbook brought together with additional voices that speak to the similarities and differences of these two seemingly distinctive domains. This bridge-building will encourage a new generation of undergraduate students studying psychology to more fully appreciate the real potential for the study of human behaviour, and as such it will represent a more provocative alternative to standard general psychology textbooks. It also support teaching in a host of courses, namely 2nd and 3rd courses on the conceptual and philosophical nature of psychology, social psychology, critical psychology and cognitive science. Selectively, it will also represent a very interesting and different choice for foundation level students too. Social Science Bites - Listen to Rom Harre on 'What is Social Science?'

The Evolving Self Sep 18 2021 The acclaimed sequel to the international bestseller *Flow*: an intelligent, inspiring guide to unlocking the evolutionary history of our present consciousness, and “becoming at one with the power that is the universe.” “A book of singular importance and timeliness, one with momentous implications for the future.”—Howard Gardner In Mihaly Csikszentmihalyi’s bestselling *Flow*, he introduced readers to a radical new theory of happiness. Now in *The Evolving Self*—his breakthrough sequel—he demonstrates how we can understand and overcome our evolutionary shortcomings. Premised on the idea that only through a reckoning with our evolutionary past can we build a stable, meaningful future, *The Evolving Self* covers the challenges associated with our cognitive evolutionary history (“As far as controlling the mind is concerned, we are like a novice driver behind the wheel of a racing car”); the distortions of reality we experience due to genes, culture, and our sense of self; and the central importance of “flow” from an evolutionary perspective as we look toward the future. Erudite, perceptive, and insightful—and more important now than ever, as our consciousnesses are increasingly mediated by electronic devices—*The Evolving Self* is a timely resource for anyone looking to improve our world for ourselves and for generations to come.

Principles of Social Psychology Apr 01 2020 Originally published in 1987 this third edition won praise from students and instructors alike for its challenging "no nonsense" approach to the field. Thoroughly updated to reflect current research of the time, the text retains the qualities that had become its hallmarks: a cognitive approach to the process of socialization, and an emphasis on the ideas that give the discipline continuity. It offers clear, conceptually integrated discussions of all of the major topics in social psychology from the time. Shaver's focus on the concepts of social psychology provides a framework for students to develop their own applications. The principles of social behavior are presented in the text in the same way they develop in the individual moving from internal processes (social perception, self-recognition) to external issues (the environment, the law) that influence behavior. Shaver weaves contemporary issues into his treatment of basic theories, using examples from everyday situations. His supple writing engages students in the complexity of social behavior, and is one reason this title remained one of the most highly regarded texts in the field at the time.
