The Other Side of Us Oct 21 2021 "The best thing between Oliver Barrett and Mackenzie Williams is a fence. Ever since Oliver's new-neighbor gestures were met with unfriendly responses, he's decided to keep his distance. After all, he's in this seaside town to get his life on track again. That doesn't include working hard to get on Mackenzie's good side--no matter how intriguing she may be. His intentions are put to the test, however, when his dog becomes infatuated with hers. The two crafty canines do their best to break down the barriers between the properties. And where the dogs go ... well, the humans must follow! It doesn't take long for a powerful attraction to build between Oliver and Mackenzie. They soon discover that the worst of first impressions can lead to the best possible outcomes."--P [4] of cover.

Mixed Integer Nonlinear Programming Nov 09 2020 Many engineering, operations, and scientific applications include a mixture of discrete and continuous decision variables and nonlinear relationships involving the decision variables that have a pronounced effect on the set of feasible and optimal

solutions. Mixed-integer nonlinear programming (MINLP) problems combine the numerical difficulties of handling nonlinear functions with the challenge of optimizing in the context of nonconvex functions and discrete variables. MINLP is one of the most flexible modeling paradigms available for optimization; but because its scope is so broad, in the most general cases it is hopelessly intractable. Nonetheless, an expanding body of researchers and practitioners — including chemical engineers, operations researchers, industrial engineers, mechanical engineers, economists, statisticians, computer scientists, operations managers, and mathematical programmers — are interested in solving large-scale MINLP instances.

Fabless Mar 02 2020 The purpose of this book is to illustrate the magnificence of the fabless semiconductor ecosystem, and to give credit where credit is due. We trace the history of the semiconductor industry from both a technical and business perspective. We argue that the development of the fabless business model was a key enabler of the growth in semiconductors since the mid-1980s. Because business models, as much as the technology, are what keep us thrilled with new gadgets year after year, we focus on the evolution of the electronics business. We also invited key players in the industry to contribute chapters. These "In Their Own Words" chapters allow the heavyweights of the industry to tell their corporate history for themselves, focusing on the industry developments (both in technology and business models) that made them successful, and how they in turn drive the further evolution of the semiconductor industry.
