Economic Reforms in India and China Mar 30 2023 This first-of-its-kind collection summarizes current trends in the economic scenario of India and China in the backdrop of globalization and outlines not only the goals and strategies for development but also the policies to achieve those goals. It provides a frame of development by addressing various issues such as how to expand the services sector, how to keep pace with the incredible growth of the manufacturing sector and how to ensure widest possible diffusions of the huge economic gains. Economic

Reforms in India and China: Emerging Issues and Challenges presents the latest data and appraises issues pertaining to the economic reforms of India and China—two of the major contenders for global power. The two countries have followed different paths to economic growth and yet both have emerged as fast growing economies. Thus, it is interesting to know the comparative views of the growth stories of the two countries to see where they are heading. The volume brings together some of the most influential scholars in development economics from India and China. They address issues that include the governance as well as the historical perspective of globalization, poverty, inequality of income and the potential for conflict, agriculture, WTO and its relation with trade prospects, and the nature and characteristics of institutions and markets. The compilation is a significant addition to the existing literature on development and reforms, as it puts forward in a single volume, a vast

range of academic concerns—those of economists, sociologists, policy makers, agricultural scientists and research scholars. [Global Economy in Transition: the European Union and Beyond](#) Jan 22 2020 This volume covers various issues in global development and global economic transformation including factors affecting economies and development in the European Union (EU), the Ukraine, select countries in Africa, the Caribbean, the South Pacific as well as India and the United States. The global economy is in transition, from the 1990s' status quo to the “new normal” with heavy reliance on the internet, rapid communications, sophisticated payment systems, diminishing importance of size and distance and changing notions of the market. This volume discusses how this process is affecting economies across the globe and why an appreciation of it will help efforts by governmental bodies and the private sector to reassess societal relationships - both economic

and political. This volume shows that challenges to policy-making and the achievement of social consensus on development issues are often quite similar in all countries, irrespective of size, geographical location, endowment and developmental status. The chapters speak to concerns that touch on a cross-section of issues which are driving transition and transformation at multiple levels. As a group, they compare economic factors across transnational economic or political associations (OECD, European Union, G20) or make comparisons across or within emerging markets or small states (BRICS, various African countries, the Caribbean, South Pacific). They include the presentation of a new model for transnational agreements, discussions of policies related to labor compensation and corporate governance, comparisons of nations across the world using indices of economic development and governance, an analysis of gender inequality in employment in the European Union, comparisons of tax burdens

across the European Union and the USA, discussions of employee representation in corporate governance, and a look at grass-roots development and markets in developing economies. As a whole, in its breadth and cross-national perspective, the volume represents an important scholarly contribution to international economics.

Managerial Economics May 27 2020

Perspectives on Neoliberalism, Labour and Globalization in India Jan 28 2023

This book employs a variety of perspectives such as Institutional, Social Democratic, Marxist, Gender and Informal, Biblical and Dalit, to critically examine the impact of neo-liberal globalisation on both formal and informal sectors of the labour market and the industrial relations system. The narratives not only interrogate current institutions and paradigms, but also outline future developments.

The Zoya Factor Jul 10 2021 When the younger players in India's cricket team find out that advertising executive Zoya Singh Solanki was born at the very moment India won the World Cup back in 1983, they are intrigued. When having breakfast with her is followed by victories on the field, they are impressed. And when not eating with her results in defeat, they decide she's a lucky charm. The nation goes a step further. Amazed at the ragtag team's sudden spurt of victories, it declares her a Goddess. So when the eccentric IBCC president and his mesmeric, always-exquisitely-attired Swamiji invite Zoya to accompany the team to the tenth ICC World Cup, she has no choice but to agree. Pursued by international cricket boards on the

one hand, wooed by Cola majors on the other, Zoya struggles to stay grounded in the thick of the world cup action. And it doesn't help that she keeps clashing with the erratically brilliant new skipper who tells her flatly that he doesn't believe in luck...

Managing Information in the Roman Economy
Dec 27 2022 This volume studies information as
an economic resource in the Roman World.
Information asymmetry is a distinguishing
phenomenon of any human relationship. From
an economic perspective, private or hidden
information, opposed to publicly observable
information, generates advantages and
inequalities; at the same time, it is a source of
profit, legal and illegal, and of transaction costs.
The contributions that make up the present book

aim to deepen our understanding of the economy of Ancient Rome by identifying and analysing formal and informal systems of knowledge and institutions that contributed to control, manage, restrict and enhance information. The chapters scrutinize the impact of information asymmetries on specific economic sectors, such as the labour market and the market of real estate, as well as the world of professional associations and trading networks. It further discusses structures and institutions that facilitated and regulated economic information in the public and the private spheres, such as market places, auctions, financial mechanisms and instruments, state treasures and archives. *Managing Asymmetric Information in the Roman Economy* invites the reader to evaluate economic activities within a larger collective mental, social, and political framework, and aims ultimately to test the applicability of tools and ideas from theoretical frameworks such as the Economics of Information to ancient and comparative

historical research.

India Information Sources, Economics and Business May 08 2021 Subject bibliography of selected reference sources.

Pragmatism and Development Apr 26 2020 While European reconstruction after World War II followed the pluralistic Marshall Plan that grounded social order in individual interests and interdependence, the roots of dirigiste planning in South Asia, as in the rest of the Third World, lie mainly in the line of deterministic theories represented by Positivism and Marxism. Despite a national commitment to dirigiste planning, however, India retains substantial interstitial pluralism--pluralism within an overall centralized system--that varies from state to state. This variation is directly reflected in interstate variations in development success. Pragmatic theory, such as that underlying the Marshall Plan, is committed to seeing indigenous thought in its own terms and provides a far more comprehensive analysis of Indian social realities.

This study establishes the continuing viability and practicality of the pluralist alternative and identifies what must be done to convert a centralized system to a pluralistic one.

Ecology and Human Well-Being Apr 18 2022

This volume presents some of the latest developments in research in interdisciplinary traditions of ecological economics in India. It outlines strategies and policies that can be adopted to ensure ecological sustainability. Containing both methodological and empirical essays, the book covers a number of critical issues including: - ecological and social resilience - ecosystem services and quality of life - policy reform for sustainable development - governance and ecosystems - valuing changes in the ecosystem - communities and collective action Overall, the contributors maintain that it is essential to rethink the criteria used in the design of development processes in order to avoid committing ecological blunders. The volume focuses on the need for bridging the

knowledge systems of ecology and economics and, as such, will be of interest to researchers, environmentalists, economists and development practitioners.

Globalization, Labour Market Institutions, Processes and Policies in India Nov 25 2022

This book explores the effects of product market and labour market reforms on firms, labour institutions and labour rights in the economic and industrial relations system in India. India has over the years liberalized its economy through a broad range of reforms concerning the product market and complementing these it has also sought to reform the labour market and the industrial relations system. The book assesses the impact of these reforms on both the formal and informal labour markets in India, critically examines the labour processes and uncovers/describes precarious conditions of labour in various industries and occupations, and analyzes the dynamics involved in the making of industrial, employment and labour

policies in contemporary India.

Micro Irrigation Systems in India Jun 28 2020

This book takes stock of micro irrigation systems (MIS), the technological intervention in India's agricultural and water management sectors, over the past couple of decades. Based on empirical research from the major agriculturally dynamic states, viz., Gujarat, Rajasthan, Maharashtra, Tamil Nadu, Andhra Pradesh and Karnataka, the book provides a nuanced understanding and objective assessment of the implementation and adoption of MIS across these states. It addresses several of the questions related to adoption and impacts of MIS in India. On the adoption side, the key question that the book addresses is which segment of the farming community adopts MIS across states? The impacts analysed include those on physical, agronomic and economic aspects. At the macro level, the question being asked is about the future potential of MIS in terms of saving water from agriculture and

making more water available for environment.

The book also addresses the question of the positive/negative externalities and real social benefits and costs from the use of MIS, a major justification for heavy capital subsidies for its purchase by farmers. It also brings out certain critical concerns pertaining to MIS adoption, which need to be addressed through more empirical research based on longitudinal panel/cross sectional data. The book would be of great use to researchers (agricultural water management, irrigation economics), students of water resource engineering, irrigation engineering and water resources management, as well as to policy makers and agricultural water management experts - national and international.

Business Clusters May 20 2022 The book contains a selection of papers on business clusters in its multiple perspectives. It has evolved from the research symposium organized by the The Society for Global Business and

Economic Development (SGBED), an international group of academicians, at Dubai during January 2009. It begins with an introduction to the concept of clusters, and then examines their link to a host of strategic issues, such as their nexus to competitive advantage, their performance vis-à-vis their competitors who are not similarly agglomerated, and the challenges in measuring the performance of clusters. Regional economic clusters have serious policy implications. Governments, local as well as national, have used clusters as the unit for investment and infrastructure upgrading policies. It focuses on the normative aspects as well as practices and provides pointers on how public policies can help the development and growth of regional economic clusters. With numerous examples and cases from a host of countries such as Dubai, Mexico, Spain and Karnataka (India), the book is a must read for all students of business strategy.

The Economics and Politics of Resettlement in

India Jul 30 2020 Edited by two well-known scholars of development-induced involuntary displacement in India, this book brings together fourteen well researched and relevant essays by academics, researchers and practitioners with extensive first-hand knowledge and experience of the resettlement and rehabilitation (R&R) process in India.

Escaping the Energy Poverty Trap Jun 08 2021

The first comprehensive political science account of energy poverty, arguing that governments can improve energy access for their citizens through appropriate policy design. In today's industrialized world, almost everything we do consumes energy. While industrialized countries enjoy all the amenities of modern energy, more than a billion people in the developing world still lack energy access.

Why is energy poverty persistent in some countries and not in others? Offering the first comprehensive political science account of energy poverty, *Escaping the Energy Poverty Trap* explores why governments have or have not been able to lead in providing modern energy to their least advantaged citizens. Focusing on access to modern cooking fuels and household electrification, the authors develop a new political-economic theory that introduces government interest, institutional capacity, and local accountability as key determinants of energy access. They draw on case studies from India, East Asia, Africa, and Latin America to offer the optimistic conclusion that governments can improve institutional capacity and local accountability through appropriate policy design. Energy poverty is a policy problem, the authors assert, and engaging with it as such offers new opportunities not only for ensuring equal energy access, but also for political, economic, and environmental development.

The Agronomy and Economy of Turmeric and Ginger Mar 25 2020 Turmeric has been used as a medicine, a condiment, and a dye since at least 600 B.C., while ginger has been used extensively throughout history for its medicinal purposes. The Agronomy and Economy of Turmeric and Ginger brings these two important plants together in one reference book, explaining their history, production techniques, and nutritional and medicinal properties in detail. This book is intuitively organized by plant and use, allowing quick access to information. It puts the uniquely Indian use and history of turmeric and ginger plants into a global context of production and economic aspects. It explores the plants from a botanical perspective, and goes into details of their chemical composition as well. Rounding

out the book are chapters on disease and pest control issues. The book is a valuable resource for those involved in the production and marketing of these plants, as well as those looking for more information on the medicinal and nutritional properties of turmeric and ginger. The first book to bring together extensive information about turmeric and ginger Incorporates medicinal, nutritional and agricultural aspects of the two plants Offers a global perspective

Development of Rural India Aug 11 2021

Urban Health and Wellbeing Feb 14 2022 This book focuses on interdisciplinary issues of human health in the changing urban environments of India's largest megacities—Delhi and Mumbai. The authors explore human health concerns related to increased temperatures and air pollution in these cities in a study based on primary data collected through interviews, as well as

secondary data on causes of mortality from 2001 to 2012. During this period, the surface temperatures for both megacities were mapped using Landsat Images. The rapidly increasing populations of cities and urban centers alter ecosystem services such as water, air and land cover, with disastrous impacts on health and wellbeing, particularly in megacities. In 2015, polluted air was estimated to have been responsible for 6.4 million deaths worldwide, and it is projected that it will cause between 6 and 9 million deaths per year by 2060. In 2017, outdoor air pollution resulted in 1.2 million deaths in India and brought about a 3% loss in GDP. The increase in population, vehicles, and industries has led to changes in land use and land cover and a rise in city temperatures and air pollution, creating urban heat islands (UHIs). Together, UHIs and air pollution have damaging impacts on human health that range from stress and headache to asthma, bronchitis, and chronic diseases, and even to death. Delhi has been

experiencing emergency conditions in terms of environmental health over the past two years. At the same time, both the Delhi and Mumbai urban agglomerations are growing at a rapid pace, and the United Nations has projected that they will be the second and third most populous cities in the world by 2025. In this context, the book offers significant insights into the past patterns and responses to the present global urban health emergencies, and explores sustainable means of combating the problem to enable college and university researchers to develop innovative solutions. Further, it presents trans-disciplinary research that cuts across the WHO Action Plan, the Sustainable Development Goals, the Sendai Framework for Disaster Risk Reduction, and Habitat III to help policymakers gain a better understanding of the global challenges of urban health and wellbeing. The book is especially useful for students and researchers in geography, urban demography, urban studies, environmental studies, health

sciences, and policy studies.

Accessions List, India Dec 15 2021

Western Ghats - From Ecology To

Economics Feb 23 2020 The hill chain of Western Ghats, a treasure trove of biodiversity and the water tower of peninsular India has been engrossed the attention of various stakeholders all over the world. This region is identified as one among the eight hottest hotspots of biodiversity and hence attracted worldwide attention. This book is a compilation of various research articles related to Western Ghats, its ecology, environment, geography, biodiversity, etc. The editors have taken utmost care to include articles related to various issues such as, the debates over WGEEP and HLWG reports, studies on mining and quarrying activities, agriculture and allied activities, issues related to sustainable agricultural practices, agrarian distress, impact of migration, changing land use pattern, other economic activities and its impact on the environment and ecology, etc.

The book offers an insight into the concerns of the farmers and offers policy solutions wherever possible.

Agrarian Transformation in Western India Apr 06 2021 This book examines the economic gains and social costs of agrarian transformation in India. The author looks at three phases of agrarian transformation: colonial, post- colonial, and neoliberal. This work combines macro and micro economic data, economic and

noneconomic phenomena, and quantitative and qualitative aspects while exploring the context of historical and contemporary changes with special reference to Maharashtra in western India. It discusses regional disparities in agricultural development, issues of modernisation and social inequality, land owning among scheduled castes and tribes, women in agriculture, pattern of labour migration and farmer's suicides, and documents the experiences and conditions of the rural poor and socially weaker sections to provide a comprehensive understanding of the significant changes in agrarian rural economy of western India. It also discusses contemporary development policy and practices and their consequences. Lucid and topical, this volume will be useful to scholars and researchers of agrarian studies, rural sociology, social history, agricultural economics, development studies, political economy, political studies, and public policy, as well as planning and policy experts.

Planning and Managing the Experience Economy in Tourism Mar 06 2021 Tourism is facing a new paradigm that has been brought on by the introduction of experiences in the development, management, and promotion of tourism. Associating experiences to tourism destination and products allows tourists to relate to their vacations differently and helps to fuel a destination's competitiveness and compliance with new needs and motivations that are being driven by the tourists. When properly design, managed, and developed, tourism experiences can contribute to the destination's overall

sustainability by maximizing tourism's positive impacts and fostering their spillover to local communities. *Planning and Managing the Experience Economy in Tourism* is an essential reference book that seeks to advance research on tourism experience as well as investigate how tourism experiences can create and increase tourism competitiveness. The book explores how the experience concept has evolved in the last decade, alongside the needs and motivations of consumers, and how it can be conceptualized, designed, managed, and implemented both at the tourism firm and destination levels. Delving further into concepts like creative tourism, destination attributes, and smart experiences, this book serves as a dynamic resource for travel agencies, tourism managers, tourism professionals, marketers, destination managers, government officials, policymakers, academicians, students, tourism officials, planners, and researchers.
