Property Valuation May 30 2020 This new edition of the 'all in one' textbook for the postgraduate study of valuation on real estate courses retains  
its focus on the valuation and appraisal of commercial and industrial property across investment, development and occupier markets. It is structured  
from the client perspective and covers single-asset pricing, risk and return issues. The structure of the book has been substantially revised. Part  
A introduces the key microeconomic principles, focussing on land as a resource, production functions, supply and demand and price determination. The  
locational aspect of real estate is also introduced. Macroeconomic considerations are categorised by the main market sectors (and their function); the

market for land (development), for space (occupation) and for money (investment). The economic context is set and the author then explains why property valuations are required and discusses the main determinants of value and how they might be identified. The mathematics required to financially quantify value determinants are also introduced. Part B of the book describes the methods of valuation; Part C applies these methods to the valuation of a range of property types for a wide variety of purposes; and Part D covers investment and development appraisal. The author introduces valuation activities from a broad economic perspective, setting valuation in its business finance context and combining its academic and practical roots. Changes in this second edition include: less daunting economics expanded companion website with PowerPoint slides for lecturers, self-test Questions & Answers for students: see <http://www.wiley.com/go/wyattpropertyvaluation> a up-to-date case studies and sample valuations reference to the newly-published Red Book (the valuer's bible) Property Valuation with its user-friendly format, using tried-and-tested teaching and learning devices and a clear writing style, remains the core text for students on real estate, estate management and land economy degree courses, as well as for fast-track conversion courses for non-cognate graduates.

Principles of Property Investment and Pricing Sep 14 2021 This book is a comprehensive analysis of property investment and the market's determination of commercial property values and investment performance. The author examines the economic forces that operate in the property market by placing property in the context of the overall investment market and the local, national and international economies. Relevant concepts and principles of economics, investment and finance are identified; these are then used to explain the operation of the property market and property price determination. The text begins with a study of the stock market, identifying the principles and forces which explain the price determination of stocks and shares. These principles are then applied to commercial property investments and a simple theory is developed. The three major sectors of the property market (letting, development and investment) are then analysed in depth, and the pricing theory is reviewed. After an examination of the influence of government intervention, the subject is synthesised by detailed studies of three of the most turbulent periods in the history of the post Second World War property market in the UK. In this second edition, both the text and illustrative examples have been updated. The theory of the market's determination of rental values and yields have been substantially revised and developed. A new chapter, discussing the 1980s property boom and the 1990s collapse, has been added.

The Income Approach to Property Valuation Aug 02 2020 A classic textbook that has guided generations of students through the intricacies of property valuation, The Income Approach to Property Valuation remains a keen favourite amongst students and teachers alike. This new edition has been thoroughly revised and updated to meet the increasingly international perspectives of modern Real Estate students. The links between theory and practice are clearly demonstrated throughout, with a range of new international case studies and practice-based examples. The Income Approach to Property Valuation teaches readers: how to analyse market rents and sales prices to derive market evidence to support an opinion of market value; the investment method of valuation and how it is applied in practice; how specific legal factors can impact on market value when they interfere with market forces; what the market and the profession may consider to be the 'right' methodology in today's market place; and how to use spreadsheets in valuation. This extensively revised new edition is perfect both for students on Real Estate courses worldwide and for professional candidates working towards their final assessment of professional competence (APC) for the Royal Institution of Chartered Surveyors, needing to demonstrate a valuation competence at levels 2 and 3.
