In *Smart Kids, Bad Schools*, award-winning author and educator Brian Crosby draws on his twenty years as a high school English teacher to offer a candid appraisal of why our schools are failing and what we must do to save them. Crosby's no-holds-barred critique of the broken education system leaves no stone unturned: he is unapologetic and uncompromising in his exposé of how teachers, administrators, unions, and parents all play a part in this national tragedy. Crosby offers 38 ideas to save America's future and his proposed remedies are revolutionary. He recommends bold measures, such as lengthening the school day and school year, forcing parents to volunteer at schools, abolishing homework, outlawing teachers unions, and cutting special education funding. The result is a book that is likely to inflame passions on all sides of the political spectrum, and, in the process, introduce new ideas to a debate that is in dire need of them. *ADHD and Asperger Syndrome in Smart Kids and Adults* offers detailed examples of individuals who have above-average cognitive intelligence, but struggle with executive function impairments of ADHD and significant social-emotional impairments of Asperger syndrome. The book centers around twelve case studies of bright children, teens, and adults treated for both ADHD and Asperger syndrome. Each chapter describes diverse examples of their strengths and their difficulties and explains how these individuals can be helped with appropriate treatment to overcome their ADHD impairments and to improve their ability to understand and interact more effectively with others. Case examples are followed by updated, science-based descriptions of these disorders. Providing science-

based information about ADHD and Asperger syndrome in clearly understandable, accessible language, this text is ideal for clinicians, educators, social workers, medical and mental health service providers, and parents of those struggling with such impairments. It also advocates for restoring the diagnosis of Asperger Syndrome to diagnostic manuals of the American Psychiatric Association and World Health Organization. If you want to actually do something about providing excellent education for every child in America, this book is for you. Using insights from cognitive science, educational research, and the social sciences, the authors examine the compelling nature of four "dumb ideas" at the center of current education policy and practice: (1) simplifying knowledge helps students learn more and faster, (2) teaching and learning are a matter of proper transmission of good content, (3) homogenous environments ease learning, and (4) more standardized data and rigorous controls of our schooling will solve all our problems. The authors then present research that consistently shows why smart K - 12 education will not be achieved by current policies and practices, such as high-stakes standardized tests, homogenous grouping, and abbreviated teacher preparation. This lively book offers solutions for changing the harmful disconnect between our goals and the means we employ to get there, including key "smart ideas" and a set of how-to actions that will lead to great schools for every child. The creator of the Achieving Academic Excellence Through Nutrition program offers parents a practical handbook on how to promote a child's attention and energy levels, reduce disciplinary problems, and enhance health through a nutritional approach, with tips on developing a healthy kitchen, battling peer pressure and junk food, and more.
