A New York Times Notable Book of the Year
"Brilliantly breathes life not only into the perils of living at sea, but also into the hidden dangers of domesticity, parenthood, and marriage. What a smart, swift, and thrilling novel." —Lauren Groff, author of Florida Juliet
is failing to juggle motherhood and her stalled-out dissertation on confessional poetry when her husband, Michael, informs her that he wants to leave his job and buy a sailboat. With their two kids—Sybil, age seven, and George, age two—Juliet and Michael set off for Panama, where their forty-four foot sailboat awaits

them. The initial result is transformative; the marriage is given a gust of energy, Juliet emerges from her depression, and the children quickly embrace the joys of being at sea. The vast horizons and isolated islands offer Juliet and Michael reprieve – until they are tested by the unforeseen. A transporting novel about marriage, family and love in a time of unprecedented turmoil, *Sea Wife* is unforgettable in its power and astonishingly perceptive in its portrayal of optimism, disillusionment, and survival. abstracts for aerospace related reports obtained from
world wide sources and announces documents that
have recently been entered into the NASA Scientific
and Technical Information Database. In v.1-8 the final
number consists of the Commencement annual.
Includes the Proceedings of the Royal geographical
society, formerly pub. separately. Drawing upon an
extensive collection of private papers, the author
brings to life the colourful story of Taylor, Canada's
premier geographer. He founded Canada's first
Department of Geography at the University of Toronto,
and Australia's first Geography Department at Sydney
University. Taylor also had the distinction of being
chief geologist on Scott's historic 1910-1912 Antarctic
Expedition. This Palgrave Pivot tells the transnational
story of the astronomical observatory in the hills near
Santiago, Chile, built in the early twentieth century
through the efforts of astronomers from the Lick
Observatory in California. Venturing abroad to learn
from largely unmapped Southern skies and, hopefully,

answer lingering questions about the structure of the galaxy, they planned a three-year research expedition—but ended up staying for more than twenty-five years. The history of the Mills Expedition offers a window onto the history of astronomy, the challenges of scientific collaboration across national lines, and the political and cultural contexts of early-twentieth-century Chile and the United States. The 21st century has seen no shortage of historic problems, which has begged the question, How is society preparing today's young people to take on these challenges? There have been a fair number of obscure but promising approaches that warrant testing but do not currently attract the level of attention needed to secure the necessary resources for a proper test. Narrative Thinking and Storytelling for Problem Solving in Science Education is an essential academic publication that focuses on the use of storytelling to respond to the fundamental need to share experiences while also inspiring world-changing solutions through the stimulation of curiosity, imagination, and reflection. Focusing on this widespread, powerful, and multifaceted form of communication, this book centers on the use of storytelling as a narrative and rhetorical technique in scientific knowledge, research, teaching, and learning. Covering topics such as digital storytelling, narrative schema, and mediation, this powerful reference source is ideal for researchers, scientists, instructional designers, communication

specialists, and academicians. First multi-year cumulation covers six years: 1965-70. A world list of books in the English language. "This is a delightful and funny adventure ... It is also lonely, dangerous and frightening."—THE LONDON TIMES He survived a terrifying crocodile attack off Australia's Queensland coast, blood poisoning in the middle of the Pacific, malaria in Indonesia and China, and acute mountain sickness in the Himalayas. He was hit by a car and left for dead with two broken legs in Colorado, and incarcerated for espionage on the Sudan-Egypt border. The first in a thrilling adventure trilogy, *Dark Waters* charts one of the longest, most gruelling, yet uplifting and at times irreverently funny journeys in history, circling the world using just the power of the human body, hailed by the London Sunday Times as "The last great first for circumnavigation." But it was more than just a physical challenge. Prompted by what scientists have dubbed the "perfect storm" as the global population soars to 8.3 billion by 2030, adventurer Jason Lewis used *The Expedition* to reach out to thousands of schoolchildren, calling attention to our interconnectedness and shared responsibility of an inhabitable Earth for future generations. * * WINNER of the BENJAMIN FRANKLIN AWARD & ERIC HOFFER AWARD * * "Often funny and irreverent, always frank and authentic, Lewis's first volume of *The Expedition* series is also marked by the thrills of a first-rate adventure."—FOREWORD REVIEWS "Skating through

Alabama with long hair, duct tape on the nipples, and women's culottes ... What were you thinking?"—JAY LENO, *The Tonight Show* "A riveting true-life adventure as inspiring as it is thrilling."—UTNE READER "An extraordinary expedition on an epic scale."—BEN FOGLE, television presenter and adventurer "Last great first for circumnavigation."—THE SUNDAY TIMES "Truly a tale for our time. You really smell, taste and breathe this journey in a way that is only possible by travelling more slowly."—ROYAL SCOTTISH GEOGRAPHICAL SOCIETY

In 2005 Dixie Dansercoer and Troy Henkels accepted the challenge to journey from Alaska to Siberia. They would cross unsupported--skiing, walking, swimming and paddling--relying solely on their polar experience, determination and their passion for ice and snow. The moving ice masses of the Bering Strait are unique polar territory, a ghostly and mysterious world of high powered ice movements. In 1845, Sir John Franklin and his men set out to "penetrate the icy fastness of the north, and to circumnavigate America." And then they disappeared. The truth about what happened to Franklin's ill-fated Arctic expedition was shrouded in mystery for more than a century. Then, in 1984, Owen Beattie and his team exhumed two crew members from a burial site in the North for forensic evidence, to shocking results. But the most startling discovery didn't come until 2014, when a team commissioned by the Canadian government uncovered one of the lost ships: Erebus. A

richly illustrated story of a unique continent--its history, wildlife, scientific discoveries and resources. The author traces how Lewis and Clark's epic journey of 1804-06 and their charting of the American Northwest dramatically revised generally held concepts of the area's geography. With 45 maps. "Splendidly researched and highly readable" — Donald Jackson, editor of the Letters of the Lewis and Clark Expedition.

These days, there are many advantages to buying a used car over a new car. Unfortunately, purchasing a used car may pose a greater risk to the consumer. A used car in its nature will most likely need more repairs, lack newer safety measures, and may come with a short warranty or none at all. That is why it is so important for consumers to do extensive research so they can avoid all of the pitfalls of the used car market category. The auto experts at "Consumer Reports" have done the work for you and have compiled their extensive research and report their findings into the 2006 edition of "Used Car Buying Guide." This fabulous tool will help steer any consumer who is in the market for a used car towards the better-performing and more reliable used car models and away from those models with a troubled past or substandard performance. Before consumers set foot on a used car lot, they should read all the valuable information provided in this book so they can be armed with as much information as possible and the knowledge to make an educated choice. "Consumer Reports" knows cars and

offers the most detailed and revealing used car reliability information available anywhere including: - Reviews of every major model from 1998 - 2005 - Lists of the best and worst used vehicles and how to avoid a lemon - A checklist of what to look for when inspecting a used car - Tips on negotiating the best price Reliability and crash test information - Making sense of safety information The majority of this book is devoted to the profiles of 256 cars and trucks, presenting all major 1998-2005 models. Each profile contains a photo from the representative year, a write-up of the vehicle, reliability history, crash-test data, and the model years when key safety gear was added and when a major redesign was made.
