Since then it has progressed from the invention of dynamite to the use of heavy ANFO. During the past two decades, there have been numerous technical contributions which have brought a better understanding of rock fragmentation with explosives, an improvement in drilling equipment and a noticeable evolution in the development of new explosives and blasting accessories. The Geomining Technological Institute of Spain (ITCE), aware of this progress and of the importance which the breakage process has acquired in mining and civil engineering projects, has ordered the publication of *Drilling and Blasting of Rocks*. The purpose of this Handbook is to give basic knowledge of the drilling systems, the types of available explosives and the accessories and the parameters that intervene in blast designing, whether controllable or not; at the same time the objectives and contents contribute to improved safety in mining. The Handbook is meant for all professionals who are involved with explosives in mining operations and civil engineering projects, as well as for students of technical schools.

ADP 3-0, Operations, constitutes the Army's view of how to conduct prompt and sustained operations across multiple domains, and it sets the foundation for developing other principles, tactics, techniques, and procedures detailed in subordinate doctrine publications. It articulates the Army's operational doctrine for unified land operations. *ADP 3-0* accounts for the uncertainty of operations and recognizes that a military operation is a human undertaking. Additionally, this publication is the foundation for training and Army education system curricula related to unified land operations. The principal audience for *ADP 3-0* is all members of the profession of arms. Commanders and staffs of Army headquarters serving as joint task force (JTF) or multinational headquarters should also refer to applicable joint or multinational doctrine concerning the range of military operations and joint or multinational forces. Today, John Deere is remembered-some say mistakenly-as the inventor of the steel plow. Who was this legendary man and how did he create the internationally renowned company that still bears his name? He began as a debt-stricken blacksmith who, fleeing debt in New England in the 1830s, set up shop in a little town on the Illinois frontier. There, in response to farmers' struggles, he designed a new plow that cut through the impervious prairie sod and lay open the rich, heavy soil for planting. The demand for his polished steel plow convinced him to specialize in farm implements. In the decades before the Civil War, John Deere envisioned a company supplying midwestern farmers with reliable, affordable equipment. He used only high quality, imported steel and resisted pressure to raise prices. At the same time, he won respectful affection from his employees by working alongside them on the shop floor. Upon taking the helm in the 1860s, John's only surviving son, Charles, expanded the Moline factories to increase production, started branch houses in major midwestern cities to speed distribution, and began to transform the company into a modern corporation. The transformation didn't come without difficulties however: Charles found himself battling the Grange, facing threats of labor unions and strikes led by his own employees, and enduring patent suits and blatant thefts of product designs and advertising. The great financial crisis of 2008 and the ensuing global economic and financial turmoil have launched a search for "models" for recovery. The advocates of austerity present the Baltic States as countries that through discipline and sacrifice showed the way out of crisis. They have proposed the "Baltic model" of radical public

sector cuts, wage reductions, labor market reforms and reductions in living standards for other troubled Eurozone countries to emulate. Yet, the reality of the Baltic "austerity fix" has been neither fully accepted by its peoples, nor is it fully a success. This book explains why and what are the real social and economic costs of the Baltic austerity model. We examine each of the Baltic States by connecting national level studies within a European and global political economy, thereby delivering comparative breadth that supersedes localized understandings of the crisis. Thus for each of the three Baltic states, individual chapters explore the different economic and social dimensions of neo-liberal post-communism and the subsequent wider global economic and financial crisis in which these newly financialized economies have found themselves especially vulnerable. The "austerity model" adopted by Baltic national governments in response to the crisis reveals the profound vulnerabilities created by their unwavering commitment to liberalized economies, not least in terms of the significant "exit" of their labor forces and consequent population loss. This book looks beyond basic financial metrics claiming a success story for the Baltic austerity model to reveal the damaging economic and social consequences, first of neo-liberal policies adopted during transition, and latterly of austerity measures based on "internal devaluation." Combined these policies undermine the possibility of longer-term recovery and even social and economic sustainability, not to mention prospects for successful integration in the now-faltering European project that has departed from its "Social Model" roots. The World of the Skandapurāṇa consists of two parts. In the first part the historical environment in which this Purāṇa was composed is described. The second part explores six localities in Northern India that play a prominent role in the text. As global waste generation increases at a rapid rate, there is a dire need for waste management practices such as collection, disposal, and recycling to protect from environmental pollution. However, developing countries generate two to three times more waste, resort to open dumps more often than developed countries, and are slower to integrate waste management standards. There is a need for studies that examine the waste generation and practices of countries that share similar economic backgrounds as they strive to implement successful waste management techniques. Sustainable Waste Management Challenges in Developing Countries is an essential reference source that discusses the challenges and strategies of waste management practices and the unique waste issues faced by developing countries that prevent them from achieving the goal of integrated waste management. While highlighting topics including e-waste, transboundary movement, and consumption patterns, this book is ideally designed for policymakers, legislators, waste company managers, environmentalists, students, academicians, and municipal planners seeking current research on the global waste management problem. Diesel Models: 670, 770, 870, 970, 1070 Cvinger nad Virom pri Stični velja za eno najpomembnejših železnodobnih središč na območju jugovzhodnih Alp. Njegova pomembnost se ne izraža zgolj v velikosti in umeščenosti v prostor, ampak tudi v ekonomski moči prebivalstva, ki jo je moč razbrati iz bogatih najdb najdenih na stiških nekropolah. Do sedaj je bilo o Stični objavljeno lepo število znanstvenih razprav, člankov in monografij, ki večinoma obravnavajo najdbe z grobišč. Predstavljeni so bili tudi izsledki naselbinskih izkopavanj z mednarodno soudeležbo v letih 1967 do 1974, vendar brez celovite in poglobljene analize keramičnih najdb. Le-tem je posvečena pričujoča knjiga, razdeljena v tri dele. Prvi del prinaša revizijo naselbinskega stratigrafskega in kronološkega zaporedja, ki omogoča povezavo med pogosto težko opredeljivimi naselbinskimi in utrdbenimi fazami ter pripadajočim večinoma keramičnim gradivom. Drugi del predstavlja jedro razprave, to je analitične študije keramike (način izdelave, oblike, okras), zaključuje pa se s pogledom na kulturni razvoj naselja in kronološkim okvirjem, kot ga zarisuje keramično gradivo. Tretji del je kataloška predstavitev reprezentativnega vzorca obravnavanih najdb.

__ Cvinger near Vir pri Stični is considered one of the most important Iron Age center in the southeastern alpine region. Its importance reflects not only in the size and location in the area, but also in the economic power of the population, which can be seen from the rich artefacts found at Stična necropolises. Until now it was published about Stična a number of scientific papers, articles and monographs, mostly dealing with finds from the graves. They were also presented the results of settlement excavations with international participation in the years 1967 to 1974, but without a comprehensive and in-depth analysis of the pottery. It is now dedicated to this book, divided into three parts. The first part provides a revision of settlement stratigraphic and chronological sequence, which allows connection between the often elusive settlement and fortification phases and their mostly ceramic material. The second part of the core of the debate, it is an analytical study of ceramics (method of manufacture, shape, decoration), concludes, however, with a view to the cultural development of the village and chronological frame, as it outlines the ceramic material. The third part is the catalogue of a representative sample of the presented finds. In Jan. 2012, Sec. of Defense Leon E. Panetta issued Sustaining U.S. Global Leadership: Priorities for 21st Century Defense. Key elements of that new strategic guidance were a rebalancing to the Asia-Pacific region while maintaining our commitment to partners in and around the Middle East. It also emphasized developing innovative ways to achieve security objectives, such as combined exercises and other means of building partner capacity and interoperability, and an increased use of rotational presence overseas. The 2012 Army Strategic Planning Guidance (ASPG) provided the initial vision for how the Army could best support the new strategic guidance. The 2013 ASPG is a refinement of that vision, incorporating a year's worth of study, analysis, and experience. Though in Afghanistan the Army is proceeding to transfer security responsibility to the Afghan National Security Forces, the fight there is not yet finished. The Army has already begun preparing to meet the demands of the rebalance to the Asia-Pacific region and the emphasis on building partner capacity and shaping the security environment as directed by the new Defense strategic guidance. These changes must be made carefully, however, in this time of decreasing budgets. Figures. This is a print on demand report. In 1950, Timothy Evans was hanged for the violent murder of his baby daughter; he was also assumed to have murdered his wife. Then, less than three years later, another tenant, John Christie, was found to have killed at least six women, hiding their bodies in the garden, under floorboards and in a concealed kitchen alcove. Christie followed Evans to the gallows. It seemed unlikely that two murderers were living at 10 Rillington Place, and the evidence that emerged in the Christie case eventually led to Evans receiving a pardon. But there was also circumstantial evidence that Evans had indeed killed his wife and child. Crime student Edna Gammon firmly believes that Evans was guilty. In A House To Remember, she explains why.
