Handbook of Fermented Food and Beverage Technology Two Volume Set Apr 05 2021 Fermented food can be produced with inexpensive ingredients and simple techniques and makes a significant contribution to the human diet, especially in rural households and village communities worldwide. Progress in the biological and microbiological sciences involved in the manufacture of these foods has led to commercialization and heightened int

Roundabouts Jul 20 2022 TRB's National Cooperative Highway Research Program (NCHRP) Report 672: Roundabouts: An Informational Guide - Second Edition explores the planning, design, construction, maintenance, and operation of roundabouts. The report also addresses issues that may be useful in helping to explain the trade-offs associated with roundabouts. This report updates the U.S. Federal Highway Administration's Roundabouts: An Informational Guide, based on experience gained in the United States since that guide was published in 2000.

Islamic Philosophy and Theology Sep 22 2022 Events are making clear to ever-widening circles of readers the need for something more than a superficial knowledge of non-European cultures. In particular, the blossoming into independence of numerous African states, many of which are largely Muslim or have a Muslim head of state, has made clear the growing political importance of the Islamic world, and, as a result, the desirability of extending and deepening the understanding and appreciation of this great segment of mankind. Islamic philosophy and theology are looked at together in a chronological framework in this volume. From a modern standpoint, this juxtaposition of the two disciplines is important for the understanding of both; but it should be realized at the outset that it is a reversal of the traditional Islamic procedure. Not merely were the disciplines different, but in the earlier centuries the exponents were two different sets of persons, trained in two different educational traditions, each with its own separate institutions. There was little personal contact between philosophers and theologians, and the influence of the two disciplines on one another was largely by way of polemics. Eventually while philosophy died out as a separate discipline in the Islamic world, many parts of it were incorporated in theology. This work is designed to give the educated reader something more than can be found in the usual popular books. The work undertakes to survey a special part of the field, and to show the present stage of scholarship. Where there is a clear picture this will be given; but where there are gaps, obscurities and differences of opinion, these will also be indicated. This work is brilliant in its design, style, and intimate understanding. It is a must read for specialists and policy makers alike.

Narrative and Discursive Approaches in Entrepreneurship Jan 02 2021 . . . the four books comprising the series would certainly be a valuable addition to any entrepreneurship library. However, each book also stands

alone as an individual purchase. Lorraine Warren, *International Journal of Entrepreneurial Behaviour and Research* The book delivers what it promises: a map of the uses of narrative methods in entrepreneurship studies. It is both an interesting contribution to the field and an important methodological handbook for all entrepreneurship researchers who are thinking of adopting qualitative methods in their inquiries. However, it may also be read with advantage by other researchers using ethnography as their main methodological approach to social studies. . . The aim of the book is to show how narratives can enrich entrepreneurship studies, a goal that in my opinion is aptly fulfilled. Monika Kostera, *Scandinavian Journal of Management* . . . the contributors in this text breathe fresh and imaginative linguistic resources and narrative/discursive frames of reference into the inquiry of entrepreneurial activities. The anecdote, the narrative, the metaphorical, the discursive and the dramaturgical are significant therefore, not only because they bring to the surface voices, emotions, processes and the relationality of (everyday) entrepreneurial activity that have possibly been previously silenced. But also, to paraphrase Steyaert, these approaches highlight the controversial and interactive aspects of the research process. . . The text is welcome because it treats narrative in a serious and scholarly way. Denise Fletcher, *International Small Business Journal* In their edited book *Narrative and Discursive Approaches in Entrepreneurship*, Daniel Hjorth and Chris Steyaert provide a fascinating glimpse into a perspective on entrepreneurship that will be enlightening for many readers. Entrepreneurship authors typically talk about theory, methods, and data as if a straight-forward linear process united them all, and making sense of entrepreneurship was simply a matter of knowing how to interpret one's findings . By contrast, the authors in this volume propose narrative and discursive approaches in which the contributing authors emphasize rich description, reflexive conceptualization, and interpretations offered as part of the story itself. They draw upon an international set of cases, including Russia, Sweden, Denmark, Norway, Venezuela, and North America. The cases themselves make for fascinating reading, quite apart from what we learn about the difficulties of imposing a particular interpretation on a given story. For example, taxi drivers in Caracas, management consultants in Denmark, and women entrepreneurs in northern Norway all make for fascinating narratives from which to understand the entrepreneurial process. Unlike many edited books which have no plot , the editors have included opening and closing sections that link the chapters, offer alternative readings of them, and propose new and expansive ways of thinking about entrepreneurship. Howard Aldrich, University of North Carolina at Chapel Hill, US Daniel Hjorth and Chris Steyaert set out to advance the study of entrepreneurship by refocusing the lens of discovery from economics, management and marketing to other paradigmatic stances in social sciences and humanities like anthropology and literary studies. The result is a provocative collection of chapters that inspire the reader to consider and explore new ideas and research practice that incorporate both the context and place of entrepreneurship. From the perceptive insights of the editors to the rigorous and provocative discourse of the chapters and thoughtful responses in the conclusion emerges a story, in the best of storytelling tradition, about how a linguistic turn can rouse new insights. The editors ask, how do these texts move you? they entice, provoke, challenge, stimulate and guide. Their implications should be far reaching and required reading for any student of t

Photosensitizers in Medicine, Environment, and Security Aug 29 2020 This book addresses the synthesis of photosensitizers, the main emphasis being on the new methods of synthesis such as microwave, sonochemistry and the use of ionic liquids. It also addresses the photochemistry and photophysics of the photosensitizers alone and in combination with nanoparticles, the use of the photosensitizers in environmental control, safety and medicine. It discusses the common structures of the photosensitizers which are beneficial to these applications.

Handbook of Animal-Based Fermented Food and Beverage Technology, Second Edition Mar 04 2021 Fermented food can be produced with inexpensive ingredients and simple techniques and makes a significant contribution to the human diet, especially in rural households and village communities worldwide. Progress in the biological and microbiological sciences involved in the manufacture of these foods has led to commercialization and heightened interest among scientists and food processors. *Handbook of Animal-Based Fermented Food and Beverage Technology, Second Edition* is an up-to-date reference exploring the history, microorganisms, quality assurance, and manufacture of fermented food products derived from animal sources. The book begins by describing fermented animal product manufacturing and then supplies a detailed exploration of a range of topics including: Dairy starter cultures, microorganisms, leuconostoc and its use in dairy technology, and the production of biopreservatives Exopolysaccharides and fermentation ecosystems Fermented milk, koumiss, laban, yogurt, and sour cream Meat products, including ham, salami, sausages, and Turkish pastirma Malaysian and Indonesian fermented fish products Probiotics and fermented products, including the technological aspects and benefits of cheese as a probiotic carrier Fermented food products play a critical role in cultural identity, local economy, and gastronomical delight. With contributions from over 60 experts from more than 20 countries, the book is an essential reference distilling the most critical information on this food sector.

Coordination Chemistry of Silicon Jul 08 2021 The chemistry of silicon has always been a field of major concern due to its proximity to carbon on the periodic table. From the molecular chemist's viewpoint, one of the most interesting differences between carbon and silicon is their divergent coordination behavior. In fact, silicon is prone to form hyper-coordinate organosilicon complexes, and, as conveyed by reports in the literature, highly sophisticated ligand systems are required to furnish low-coordinate organosilicon complexes. Tremendous progress in experimental, as well as computational, techniques has granted synthetic access to a broad range of coordination numbers for silicon, and the scientific endeavor, which was ongoing for decades, was rewarded with landmark discoveries in the field of organosilicon chemistry. Molecular congeners of silicon(0), as well as silicon oxides, were unveiled, and the prominent group 14 metalloid proved its applicability in homogenous catalysis as a supportive ligand or even as a center of catalytic activity. This book focuses on the most recent advances in the coordination chemistry of silicon with transition metals as well as main group elements, including the stabilization of low-valent silicon species through the coordination of electron donor ligands. Therefore, this book is associated with the development of novel synthetic methodologies, structural elucidations, bonding analysis, and also possible applications in catalysis or chemical transformations using related organosilicon compounds.

Anti-personnel Weapons Apr 29 2023 This book, first published in 1978, analyses the development, uses and effects of conventional anti-personnel weapons such as rifles and machine guns, grenades, bombs, shells and mines. It provides the historical, military, technical and clinical background to the international legal discussions as part of the ongoing efforts to prohibit or restrict the uses of some of the more inhumane and indiscriminate of these weapons, the most successful being the 1997 Ottawa Treaty that banned the use of anti-personnel mines.
