Irreducible Mind Jul 04 2020 Current mainstream opinion in psychology, neuroscience, and philosophy of mind holds that all

aspects of human mind and consciousness are generated by physical processes occurring in brains. The present volume demonstrates empirically that this reductive materialism is not only incomplete but false. The authors systematically marshal evidence for a variety of psychological phenomena that are extremely difficult, and in some cases clearly impossible, to account for in conventional physicalist terms.

Winter's Graces Aug 05 2020 Filled with unexpected good news about growing older, Winter's Graces highlights eleven qualities that ripen with age—including audacious authenticity, creative ingenuity, necessary fierceness, self-transcending generosity, and a growing capacity to savor life and to ride its ups and downs with humor and grace. Decades of research have established that the catastrophic conditions often associated with late life, such as severe dementia and debilitating frailty, are the exception, not the rule. Still, the mistaken idea that aging equals devastating decline persists, causing enormous and unnecessary suffering, especially for women. Drawing on decades of experience as a

psychology professor and psychotherapist, Susan Stewart, PhD, weaves together inspiring folk stories that illustrate the graces of winter and recent research that validates them, along with a wealth of user-friendly tools and practices for amplifying these graces and bringing them to life. Written primarily for women over 50 seeking good news about growing older, *Winter's Graces* offers adults of all ages a compelling vision of aging that celebrates its many gifts, acknowledges its challenges, and reveals how the last season of life can be the most fulfilling of all.

The Psychology of Environmental Problems Apr 12 2021 A revision of Winter's Ecological Psychology (1996), this book applies psychological theory and research to environmental problems. After outlining current environmental difficulties, the authors demonstrate how 6 major approaches in psychology (social psychological, psychoanalytic, behavioral, physiological, cognitive, and holistic) can be applied to environmental problems. The authors demonstrate why it is critical to address environmental threats now, and offer ideas on how psychological principles can contribute to building a sustainable culture. Personal examples engage the reader and provide suggestions for changing behavior and political structures. Reorganized and updated throughout, the second edition features a new chapter on

neuropsychological and health issues and a list of key concepts in each chapter. Cartoons and humorous analogies add a light touch to the book's serious message. Written for psychology and environmental studies students, the book is an excellent teaching tool in courses on environmental, conservation, or ecological issues, found in departments of psychology, sociology, environmental science, and biology. It will also appeal to anyone interested in psychology's potential contributions to mounting ecological difficulties.

"I wished I lived in the world Singh has created." —*New York Times bestselling author Gena Showalter *The Biggest Bluff* Jan 28 2020 The New York Times bestseller! A New York Times Notable Book "The tale of how Konnikova followed a story about poker players and wound up becoming a story herself will have you riveted, first as you learn about her big winnings, and then as she conveys the lessons she learned both about human nature and herself." —The Washington Post It's true that Maria Konnikova had never actually played poker before and didn't even know the rules when she approached Erik Seidel, Poker Hall of Fame inductee and winner of tens of millions of dollars in earnings, and convinced him to be her mentor. But she knew her man: a famously thoughtful and broad-minded player, he was intrigued by her pitch that she wasn't interested in making money so much as learning about life. She had faced a stretch of personal bad luck, and her reflections on the role of chance had led her to a giant of game theory, who pointed her to poker as the ultimate master class in learning to distinguish between what can be controlled and what can't. And she certainly brought something to the table, including a Ph.D. in psychology and an acclaimed and growing body of work on human behavior and how to hack it. So Seidel was in, and soon she was down the rabbit hole with him, into the wild, fiercely competitive, overwhelmingly masculine world of high-stakes Texas Hold'em, their initial end point the following year's World Series of Poker. But then something extraordinary happened. Under Seidel's guidance, Konnikova did have many epiphanies about life that derived from her new pursuit, including how to better read, not

just her opponents but far more importantly herself; how to identify what tilted her into an emotional state that got in the way of good decisions; and how to get to a place where she could accept luck for what it was, and what it wasn't. But she also began to win. And win. In a little over a year, she began making earnest money from tournaments, ultimately totaling hundreds of thousands of dollars. She won a major title, got a sponsor, and got used to being on television, and to headlines like "How one writer's book deal turned her into a professional poker player." She even learned to like Las Vegas. But in the end, Maria Konnikova is a writer and student of human behavior, and ultimately the point was to render her incredible journey into a container for its invaluable lessons. The biggest bluff of all, she learned, is that skill is enough. Bad cards will come our way, but keeping our focus on how we play them and not on the outcome will keep us moving through many a dark patch, until the luck once again breaks our way.

Feeling Smart Jun 02 2020 Which is smarter -- your head or your gut? It's a familiar refrain: you're getting too emotional. Try and think rationally. But is it always good advice? In this surprising book, Eyal Winter asks a simple question: why do we have emotions? If they lead to such bad decisions, why hasn't evolution long since made emotions irrelevant? The answer is that, even though they may not behave in a purely logical manner, our emotions frequently lead us to better, safer, more optimal outcomes. In fact, as Winter discovers, there is often logic in emotion, and emotion in logic. For instance, many mutually beneficial commitments -- such as marriage, or being a member of a team -- are only possible when underscored by emotion

rather than deliberate thought. The difference between pleasurable music and bad noise is mathematically precise; yet it is also something we feel at an instinctive level. And even though people are usually overconfident -- how can we all be above average? -- we often benefit from our arrogance. *Feeling Smart* brings together game theory, evolution, and behavioral science to produce a surprising and very persuasive defense of how we think, even when we don't.

The Psychology of Environmental Problems Dec 29 2019 A revision of Winter's *Ecological Psychology* (1996), this book applies psychological theory and research to environmental problems. After outlining current environmental difficulties, the authors demonstrate how 6 major approaches in psychology

(social psychological, psychoanalytic, behavioral, physiological, cognitive, and holistic) can be applied to environmental problems. The authors demonstrate why it is critical to address environmental threats now, and offer ideas on how psychological principles can contribute to building a sustainable culture. Personal examples engage the reader and provide suggestions for changing behavior and political structures. Reorganized and updated throughout, the second edition features a new chapter on neuropsychological and health issues and a list of key concepts in each chapter. Cartoons and humorous analogies add a light touch to the book's serious message. Written for psychology and environmental studies students, the book is an excellent teaching tool in courses on environmental, conservation, or ecological issues, found in departments of psychology, sociology, environmental science, and biology. It will also appeal to anyone interested in psychology's potential contributions to mounting ecological difficulties.
